My name i[redacted] until last December I was employed by the Army and Air Force Motion Picture Service with Headquaters in Colorado Springs, Colo.

At present I am with the Altec Service Corp. of New York.

About ten months ago (exact date in some papers at Colorado Springs) I was coming from a routine trip to Great Falls AFB, between Dillon, Montana and the Monida Pass I noticed an object in the sky to the south-west, the night was clear. I stopped the car and stepped outside to be able to observe more clearly. It appeared to be a Disc of some sort but gave off a redish glow. At first I thought it was a falling meteor, but it was travelling in an arc. It made a slow turn to my right and seemed to hesitate for a fraction of a second and what appeared to be a flash from a photograhpers flash-gun lighted the ground for a Radius ten miles. Any one familiar with this location will understand why I make this estimation of area covered.

The Disc then completed all but about 60 degrees of the circle and very rapidly, in about a 30 degree climb disappeared in the general direction from which I had first sighted it. At the first truck stop, about ten minutes later, I talked to a Truck-driver that said the light was almost above his cab.

If exact dates, location, etc. would be of any account, don't hesitate to let me know.

Yours truly,

[redacted]

Mysterious Missiles Land In U. S. Zone Of Germany

BY JOHN J. MEEHAN

FRANKFURT, Feb. 22.—(UP)—Four mysterious projectiles—apparently rocket or jet-propelled—have landed in the U. S. zone of Germany since October, 1946, American authorities disclosed today.

The last one shot over the northeastern corner of the state of Bavaria last Jan. 31 and American technical experts have obtained fragments of it. But their investigations have left them mystified as to the origin of the missiles.

American officials explained that all four landed in the same general area, just east of Schweinfurt, some 35 miles from the Russian zone.

* * *

THE EXPERTS SAID they were mystified because if the projectiles were fired from the Russian zone they possessed almost uncanny accuracy since all four landed in so small an area.

The first missile was reported in October, 1946, according to German police records quoted by American authorities.

Two others followed in May and July, 1947.

The fourth arrived between 4 and 5 a. m. last Jan. 31.

A German policeman who saw its flaming tail streak through the early morning sky and then plummet into the earth said it traveled from northeast to southwest, coming from the direction of Russian-occupied territory.

It tore a hole seven feet wide and 10 inches deep in the ground and had a flaming tail 20 feet long, authorities said.

SOVIET ROCKET

Found In U. S. Zone.

Army Makes Little Of Incident. Stating Nothing Unusual Is Found In Construction.

Berlin, Feb. 22—(AP)—A Russian rocket, fired in practice, landed in the American Zone of Germany sometime ago, but caused no damage or casualties, U. S. authorities disclosed today.

The incident was kept secret until now, and details of both the bomb and the incident will remain secret, the officials said. They explained they felt no purpose would have ben served by an earlier announcement.

A high army official said there was nothing unusual in construction of the rocket. It carried a smaller-than-usual charge of explosive, as customary in maneuvers. It dug a crater about a foot deep in an isolated area near the boundary of the Soviet Zone.

The Soviet Army engaged in maneuvers last fall, and possibly the rocket was fired then. An Airlift pilot said in November he had seen Russian tanks firing guns that semed of an unusual type, and which he thought were anti-aircraft weapons.

This is the only known instance of a Russian rocket falling into the American Zone. German reports of other instances never have been substantiated.

Santa Fe New Mexican Tuesday, February 22, 1949

FRANKFURT, Feb. 22

Four mysterious projectiles-apparently rocket or jet-propelled- have landed in the U. S. zone of Germany since October, 1946, American authorities reported today.

The last one shot over the northeastern corner of the State of Bavaria last Jan. 31 and American technical experts have obtained fragments of it But their investigations have left them mystified as to the origin of the missiles.

American officials explained that all four landed in the same general area, just east of Schweinfurt, some 35 miles from the Russian zone.

The experts said they were mystified because if the projectiles were fired from the Russian zone they possessed almost uncanny accuracy since all four landed in so small an area.

They also explained that a missile traveling 35 miles from eastern Germany should have dug a larger crater, even if loaded with only ordinary charges.

The first missile was reported in October, 1946, according to German police records quoted by American authorities.

Two others followed in May and July, 1947.

The fourth arrived between 4 and 5 a.m. last Jan. 31.

A German policeman who saw its flaming tail streak through the early morning sky and then plumet into the earth said it traveled from northeast to southwest, coming from the direction of Russian-occupied territory.

It tore a hole seven feet wide and 10 inches deep in the ground and had a flaming tail 20 feet long, authorities said.

Officials said they doubted it could have been released from an airplane because the eyewitness said that he had heard no sound from a plane before the missile landed.

Thus far the experts have not been able to reconstruct the missile because they possess only a few fragments. They have not been able to determine what powered it because the fragments were rainsoaked when picked up.
