

Dr. Hillman

(off the record)
he says.

The government seems to have made a big deal out of the fact that NRC has taken over 450 investigations from DOD.

From what I have seen, they appear to be doing little.

What is being done? Very little - not subjecting observations, but will investigate ^{if they think it may bring scientific results.}

Are you simply investigating a few isolated cases which arise and trying to explain each individually, or are you seeking patterns?

What about the sightings of past years - are they being analyzed to find patterns?

What literature on the subject do NRC people peruse to find out what has gone on in research, elsewhere, in the past?

Why does NRC not show interest in a book such as mine? How do you know what it contains without reading it? Dr. Kette, as well as yourself, have ignored it. Dr. Condon at least bought a copy.

What is U. of T. doing? I can't get anything out of them.
apparently nothing being done. No funds it seems.

What is your reaction to the latest happenings at U. of Colorado?
I predicted something like this. Sorry to see such going on.

Do you feel that as long as the probability exists that one may be being visited from space, that the government should put more effort (funds and people) into finding out for certain instead of this token effort which appears to be designed to simply make people feel that something really is being done?

If Dr. Condon's report leaves the question an open one, what will NRC reaction be? Can't say, but unlikely to report.

If the report claims the matter is settled, and we are not being visited from outer space, what then will be NRC's reaction?
