Dear Mr. Allen,

A couple comments on your letter of 1 Nov.12. I will deal with everything else when I get the time.

Documents considered important to the ETH may be kept. However, how is one to determine this? Only when the government openly admits a project, as they did with the Stealth Bomber that they denied for ten years. I think the point is that no one is going to be able to get them with FOIA requests or Access to Information which is the joke of a law we have here in Canada.

So it is with the TS memo you say Smith did not receive. How do you know that it's not stored away? The same thing applies to the Davies/Smith experiments. Smith had a couple of full time people working on Magnet. Where are these documents? You ask me where the Smith/Davies documents are related to the flying disk. I ask you the same question. You stated that you received the Magnet documents, and that the Smith/Davies documents are not a part of this file. It is however clear that the experiments were part of Magnet. So if they carefully file this stuff, why were they not a part of the Magnet documents that were released? You stated that the stuff that was released was "harmless." Why then would W J Wilson say "at no time" release it? Perhaps he was referring to the TS memo authorizing Smith to proceed, the Smith/Davies experiments and lots of other goodies that would help us get to the bottom of this whole affair.

Further - Keyhoe mentions that the Canadian had a Top Secret project. The Canadian Defence Minister Paul Hellyer stated that the person who had told him the Suffield Story was an RCAF representative on a Top Secret Committee. If they released all this stuff and didn't destroy or hide it - where is it? I have enclosed the fourth and fifth pages of the Smith Memo. How many more hidden gems have you not seen.

As to the person who attended the secret meetings. Watch the Dec. Mufon. He just released his autobiography. He spent at least one day as Director of the Research and Development Board - the same position held by Bush. A quote for you from his book. "My first chance meeting with Van Bush gave me no hint of my future deep involvement with him in connection with national defense and research policy." (I bet your dying to find out who it is. His name will be made public)

As to Bush. Vannevar Bush WAS NOT the chief scientist of MJ-12.
