Dear Sirs:

I am one who is very concerned about the increasing number of cases where Unidentified Flying Objects (UFOs) interfere with people in automobiles or in aircraft and generally create concern among the population due to the lack of knowledge as to what they are and what to do about them.

I wish to be informed concerning:

1. What studies or investigations into UFOs have been made by departments of the government since 1940, with dates,
2. The specific government departments involved in each study,
3. The results or conclusions of each of these studies,
4. The view of the government as a whole (not just that of one department) towards the seriousness of this matter of UFOs,
5. The policy of the present government concerning UFO investigation in Canada.

Yours sincerely,

Arthur Bray
