

Humming Along!

Good things come in small packages. One of the greatest gifts I ever bought for myself was a hummingbird feeder to hang on my office's terrace. It took a long time for a pair of tiny green-breasted, ruby-throated hummingbirds to discover the sugary liquid I prepared for them. Once found, they made the feeder 'home.' All summer long they have given me untold joy in their comings and goings as their rapidly beating narrow wings carried them, humming in flight, to the feeder. Then suddenly, they were gone. Four, five days...no birds. I was told that they had migrated 'on schedule.' A week, two weeks...no birds. Sadly, I kept hoping they would return with their daily dances, but it seemed that they had indeed left for the winter.

Dick walked into my office to catch me gazing wistfully out the window and I sheepishly grinned and said, "Ah, I just keep hoping to see them one more time...you know, to say goodbye." As if by magical command, suddenly the two tiny creatures appeared, wings beating. They did not go to the feeder as was always their wont, but rather hung in the air outside my window, humming and beating, five feet from the feeder and directly in front of me. And then they were gone. For good. Today, a month later, I smile each morning as I enter the office, preferring to remember the episode as their farewell, meant especially for me. If you have a better idea, please don't tell me.

From Jefferson to Carter

Not everyone who ridicules a NEW idea falls into the 'closed mind' category. Thomas Jefferson, our third president and primary author of the U.S. Constitution, was certainly no intellectual reactionary. But even he ignored the facts when they stretched his view of reality beyond its broadest limits. From the book, MIND WARS, by Ron McRae, we quote: "I should rather believe the gentlemen lied," President Jefferson reportedly said, "than believe that stones fell from the sky." Thus ended the first government investigation of unidentified flying objects more than 160 years before the air force closed the books on Project Blue Book.

The gentlemen returned to Harvard. The meteorites Jefferson sent them to investigate stayed buried on a Vermont farm. The question of how the government, the public,

W and other scientists should react to evidence that challenges the conventional wisdom remains. Scientists and presidents, it seems, are no less troubled than investigative reporters or the police when confronted by the unknown."

McRae also called our attention to the difference between the standards of radiation allowed by the United States and by the Soviet Union. "Just before the Carter inauguration, the KGB abruptly turned off mysterious microwave radiation that the KGB had beamed at the U.S. embassy in Moscow since the mid-sixties. The radiations fell well under the U.S. standard for a health risk, but exceeded the much lower Soviet standard." We agree with the Soviet and Chinese radiation limitations and would lobby our congressmen to reduce the levels of allowed fallout from U.S. electronic devices.

ADDENDUM to your CPR sheet

"DO-IT-YOURSELF CPR" might save your life. For this reason the Red Cross has included "Cough CPR" in its official CPR guidelines. We pass it along (to attach to the Update Emergency Extra enclosed in your July/Aug. '86 issue.) Scenario: You suddenly realize you're having a heart attack. Since cardiac arrest halts the flow of blood and oxygen to the brain, you've got about 10 or 15 seconds before you black out. A few extra moments can make a life-or-death difference. Here's how to **gain a minute and a half or perhaps longer.** If you begin to faint or lose consciousness, JUST START COUGHING, VIGOROUSLY AND FREQUENTLY (about once every second.) "The coughing will cause the muscles of the abdomen and chest to contract in such a way as to keep blood moving through the heart and to the brain," says chief cardiologist John Criley at the Harbor UCLA Medical Center. "Our experiments have shown that the technique can maintain blood flow to the brain at levels equal to or greater than a normal heartbeat, and that consciousness can be maintained for a minute and a half, possibly longer."

W
Congratulations to our stringer Leigh Richmond Donahue on the re-publication of her fascinating sci-fi book about the solar tap, "The Lost Millenium." Copies can be purchased & mailed to Updaters for a special - \$5 - by writing to her at P.O.B. 908, Maggie Valley, N.C. 28751.

and the upper atmosphere, there exists an electrical potential of some two billion volts. This vast reservoir of non-depletable electrical energy shows us the magnitude of its available power fleetingly through the 100 lightning bolts that strike the earth each second. Tesla devised a system to tap this vast reservoir of energy.

He showed that it is possible to oscillate this essentially static reservoir of electricity in a manner that would release it for practical power uses. This is done by using electrical energy from an existing hydroelectric power source to oscillate the earth-atmosphere electrical reservoir at a specific frequency which we will call the Tesla frequency. The earth's electrical atmosphere oscillating at the Tesla frequency can be tapped at any point in the earth with a tuned power receiver. Tesla demonstrated this effect by carrying a tuned light bulb in his hand which could be switched on to illumination without any wire connections! The same technology can power automobiles, ships, airplanes, homes, factories and communication centers. The Tesla system is clean because it draws on the natural supply of atmospheric electricity, triggered by hydroelectric power."

WHAT WILL THEY FIND?

The prestigious National Academy of Sciences is checking into hordes of published claims that research being done for the CIA and the Pentagon could lead to psychic spying and mind warfare. A year ago former CIA director Stansfield Turner disclosed that the agency had, in fact, sponsored "remote viewing" research when Vice President George Bush was the CIA director. The CIA will not say what it is doing now, but a spokesman commented: "We obviously have to keep track of what the Soviets, hostile powers, are doing in that area."

The National Academy's two-year review is being conducted by a new "Committee On Techniques for the Enhancement of Human Performance," which will operate under the academy's Commission on Behavioral and Social Sciences. The committee consists of "distinguished scientists" whose disciplines include physiological psychology, learning-behavior studies, statistics evaluation research, sociology and social psychology. The study groups are to report their findings

by June 1987. The review is being financed by a two-year \$453,000 contract with the Army Research Institute.

Predictions: Ramtha Speaks

It's most heartening to have many voices speaking to the subject of change. The more who 'trumpet the voice,' the more exposure people will get to the awesome possibilities that await us between now and the turn of the century. We read with interest what many 'channels' are saying, and although we do not necessarily agree with them, we do see overall correlations to what was given to us in less specific terms. One voice making a large impact is that of RAMTHA, and many Updaters have been kind enough to keep us abreast of his words. Here are some of his predictions. They fit the scenario of change as shown to us by the Ogatta group a decade ago, but they are certainly more specific in timing. (The last three points are new to us.) We thank Lee Kirshner for these points received at the "Ramtha Intensive" in Denver last March:

- 1- Major drought and famine -worldwide-caused by sunspot activity.
- 2- Be self-sufficient by fall of '87. Drought-famine to start in '88 and last until 1990. Water-wells will be needed (underground water) in most areas because of acid rain fallout from volcanic activity. Have larders stocked, know how to grow your own food, and stay out of cities.
- 3- Most rivers and streams will be polluted except in the Northwest for those years. Jet Stream will keep the N.W. basically clean. However, other pockets in other areas of the U.S. will remain safe.
- 4- Advised to "stay off zippers" (earthquake areas) and away from the shore lines because of very high tidal forces and earthquake activity.
- 5- New islands will rise off the California coast after 1987.
- 6- Japan will have a new island by the end of 1987.
- 7- Only two world leaders will be left by the end of 1987.

Bravos to Updaters Elizabeth Kubler-Ross, Bill Jenkins, Verna Johnson and the many who are involved in the "One Million Minutes For Peace" (Sept. 15 to Oct. 15): a "think and relate effort" that positive thought is the most powerful force in the Universe.
