

Box 51, City View
October 20, 1956

Dear Harry.

I have received three letters from you without getting around to answering even one of them. The truth however is that I have been very busy. I just got back from a convention in Syracuse, N.Y., and in between times I seem to get myself very involved in civic affairs.

I mailed to you a little gadget which I made up and in which I think you will have an interest. There are a few words enclosed with it which will explain in a general way its function and purpose. It is not particularly sensitive but should show the presence of much of the current phenomenae due to field changes. When it left here it was reading exactly 0; what did the scale say when you got it? It is subject to permanent set if subjected to field conditions very much from normal, so it could have passed through something interesting on its way to you.

I haven't yet had a chance to get the Aga force document copied but expect to do so in the near future. I would like very much to see this force develop without Anna being in any way involved. You see, I am not convinced that it is anything beyond normal telekinetic force manifesting in a rather unusual way. This may be the same force which moved trumpets in seances.

I shall try to get time to wind up another of those coils and send it to you. It is a rather tedious job, but I think I can work it in. I do not have any more of the original ferrite core material, but there is no basic reason why any ferrite shouldn't work at some combination of frequency and power. I am enclosing another sketch of the winding so if you get impatient you may be able to latch onto a ferrite rod and wind one in the meantime.

Don't worry about not hearing from herbie and hellen as they seldom write unless they have something very important to impart. We have often gone several months without exchanging letters. I am sure that they are not offended; they are just not that kind of people!

On the way down to Syracuse (I took the wife and two boys along too) we had a good look at a bell. It was, I should guess, about 5 miles away, air line, and about 15,000 feet up. It was a beautifully clear day, with the sun about 90° to the right and still quite high in the sky (4 pm). It displayed its bell shape very clearly but looked as if made of luminous glass! It hovered for about ½ minute, then travelled slowly south west, and then just faded out! We all saw it and recognized it at once for what it was. It was about 5 miles west of Prescott Ontario and over the St. Lawrence river. If my estimate of distance is correct it would be about 150 feet in diameter.

I got your tape letter OK, and propose to record a reply shortly, as soon as I have something to say. Meanwhile best regards to yourself and good wife.

Wilbert

January 6, 1957

Dear Harry,

I don't rightly know who owes who the next letter, but I shall assume that it is me, probably is anyhow. First off I want to thank you very much for the California Dates. They were delicious, and we all enjoyed them very much. With each one we remembered the fine time we had together last summer.

I sincerely hope the recent fire in your general area didn't get too close to you. I am not now familiar with the LA layout so I don't know exactly where you live in relationship to the various suburbs.

George Hunt Williamson just sent me a copy of his book "Other Tongues-Other Flesh". I haven't finished it yet but find it most interesting so far. Williamson is an archeologist and treating UFO's from this aspect is well handled. There is a great deal of biblical material contained in the book with the UFO slant brought out. Unfortunately, he does not say how much of the material was received, and in fact seldom quotes extraterrestrial material to substantiate his statements. I feel that this is a weakness, as one cannot be sure how much of the material comes from "outside" and how much is his own. In any case, however, the book is worth reading and I would recommend it.

You will recall the Shelly Iresentey that was to visit Knowles last summer. He had a visit from a man from "outside" just before Christmas. This fellow arrived at Shelly's house about 1:30 am, and stayed about an hour. He said who he was but gave no name. He gave Shelly a good talking to about quite a number of things, particularly about man's place in the scheme of things and his responsibility to others and himself. Shelly told us about it right afterwards and was quite impressed. The man said he knew me but I did not know him, and it was not planned that we meet consciously at the present. However, his job is to keep his eye on several of us who for some reason have been manoeuvred into this area.

In checking over my files I find that I have not heard from Dan Fry for about a year. Could you tell me what the score is with him now? Also, I would like to know the latest on Dick Miller and those who were associated with him. I cannot help but think that there is a great deal more here than meets the eye.

Incidentally, I have an association with the Rocket Program and was not surprised to learn that some of the high altitude flights have disclosed various anomalies not consistent with conventional ideas of physics. For instance, there is a marked discontinuity in the earth's magnetic field about 20 miles up over White Sands. Also pictures taken at high altitude are out of focus by about the amount I would expect from the earth's time field gradient. I am sure that science will sooner or later twig to the basic field concept of time, after which it will be one short hop to true space travel.

Both Murl and I wish to extend to both of you the very best for the new Year.

Wilbert

Mc Call, Idaho.
July 13th 1959

Dear Wib & Muriel

Here we go again. We are now away up in the woods. Left S.B. June 15th and stopped at Bend Oregon for ten days. Rather cool all the time we were there. However we had some very good trout fishing in the several lakes in that vicinity. This place seems to have an abundance also. The scenery is not so picturesque but lovely just the same. Ethel is relaxing now and that is what she has needed. We are right on the shore of Lake Payette.

We traded in our Motor and Fibre Glass Boat for a lighter model which is easier to handle alone. Now we seem to be really in the swim. Plenty of water and a lot of fish who are smarter than I am. There are lots of very friendly people in these Trailer Parks.

Sorry to hear your trip south was not up to your expectations. Our friend Demarest in Nyack, was skeptical and altho we knew this we could not advise even as friends, for you to lay off of it. Miller and Myers made monkeys of themselves a short time ago. Miller supposedly was in contact with Monka and were to have a Space Ship overhead at the B.C. Station on a certain date. Well they sold the Commentator on the deal and altho he was extremely skeptical he went along with the deal and at the same time told the public what was to be. Of course nothing showed up and he remarked that this should settle the question once and for all time that Miller and Myers were in on a big Hoax.

We have heard from Affa a couple of times thru Frances and his answers to my questions were highly informative. I am very thankful to you for your making possible this contact. I hear that you are becoming quite an authority on the subject lately. That is, publically. How about it Wib. I thought you were reticent about this angle

How is the Gravity deal shaping up? Two Harvard boys according to the Magazine are busy also. Am still looking for that Tape on your latest efforts. Also let me know about any developments in the line of sightings. The latest we have heard is about the Ship seen by Airline Pilots this side of Honolulu. Came over the Radio from several Channels but nothing in the Papers. This was to be expected.

I shall be here until the latter part of August and will await your reply to this letter. Please let us hear from you. Love to all of you and so sorry that we cannot get out your way this year.

As ever

Harry

August 5, 1959

Dear Harry and Ethel,

Your letter, after wandering around all over town, finally arrived. You had addressed it to the old address, which has not been valid for over a year. We now have door-to-door delivery, so please send future letters to the above, NOT Box 51.

Although the OTC business turned out to be a flop, we did learn a great deal, particularly about people. I am not sorry that I sailed close to it, even though it was a whirlpool. I still think that there was the germ of an idea there, since there are certain aspects which parallel that which we know to be true gravity control.

We have seen quite a few saucers lately. One has been on almost a regular schedule; around ten thirty in the evening he comes out of the north west and sails overhead to about 20° above the horizon in the south east, turns sharply at right angles and travels through about 30° , abruptly reverses direction and back tracks to a bit beyond his original point and abruptly reverses direction again and drops rapidly down, just where we don't know, although we drove out that way once to see. We figure that this fellow is quite high and about twice the angular speed of a sputnik. It is just a bright speck, possibly disc shaped in binoculars.

This week Murl and Dick are visiting in Toronto, Norma Ann is with her aunt in Lindsay, and Jim and I are batching. Jim is working this summer at the radio station CFRA. He will be in grade 12 when he returns to school in the fall.

I am enclosing a paper which I have given to several meetings of service clubs etc. which may have given rise to your comment about the publicity. As you can see it is not at all spectacular.

Our gravity work is progressing. I think that we are definitely on the right track and it is only a matter of time and effort now.

Sincerely

Wilbert

[Faint, mostly illegible handwritten notes at the bottom of the page, possibly bleed-through from the reverse side.]

McCall, Idaho.

August 15th 1960

Dear Wib & Muri:

Here we go again. Glad to hear from you but sorry that you were unable to meet us along the line. Perhaps next year, as you say, we shall be able to make a contact.

We have had a swell trip and enjoyed every minute of it. Left the Trailer in Oregon and went to Vancouver where we stayed for three or four days with some old friends. No sightings so far along the line. Visited at Pend Oreille a beautiful lake in northern Idaho. We caught no fish so came down here where we have all the trout we care for. Tomorrow we go to Diamond Lake just north of Crater Natl Park on the border of Calif and Oregon. Have been here twenty five days and will have to stay but a short time in Diamond Lake. Have to be back in Santa Barbara to take delivery on the new 10x55 ft Mobile Home on Sept 15th. By arriving there on Sept 10th we will have just time to see the Bank and get our loan. Are buying our own furniture so as to get away from the regular cut of the mill stuff.

Wib, I wonder if you could do me a favor. I have a couple of new ideas but am stymied on acct of lack of Technical knowledge. Not wanting to tip my hand I have not contacted any of the so called brains down this way. This is it. Can you explain so that I can understand it, whether there is a way to determine and measure the vibration point of both organic and inorganic material. I know that we can do this with crystalline structures but how about organic. This is the one I am anxious about. Can it be done by using Electronics, Super Sonics? I have available thru a friend, about all the Apparatus one could desire. He is the Tel Co expert on Micro Wave transmission but says this is out of his territory. In other words I wish to determine and measure the exact point before disintegration takes place. Perhaps I am a bit off the beam on this. Anyway I know that everything has this POINT and if I can find it I could get somewhere.

Will you kindly let me hear from you by Air Mail as time is important. A Sketch would help a lot. I wish to thank you from every thing in advance. Our Love to you all.

Sincerely

Harry

2334 Anacapa St
Santa Barbara, Calif.
May 23rd 1960

Dear Wib & Muri:

Here we go again. I thot it about time to post you about our activities this summer. We have been living in our small Trailer sin Last Sept a nd think it about time to consider something permanant. Soo upon our return from the north we expect to live in a new 10 by fifty five foot Angelus Mobile Home. As we both approach the residence of Fath er time and will upon arrival enter into a larger place we hope and ~~exp~~ expect this will have to do.

We went to a meeting or talk given by Dan Fry her in town and when I mentioned your name he asked about you. I told him you had been contemplating coming down this way some time during the summer He was at once intrested and said to send you his address so that could write him before leaving. That if you came down this way he wished you would try and arrange your intinerary so that you could stop a few days as his guest at his home. He lives at 2527 Cameron St, West Covina. His Tel is ED 14509. He has a fund of info on Space and also at one time had a piece of the metal from a Saucer. Gov took it however. B, the way, does Presenti have any more contacts? He never answered my letter. Have you seen the new Atmospheric Equalizers that are quite numerous in our atmosphere. Frances wrote us about them and we have seen several. Space people are sending them out. They remain for some time in sight and at times for only a short time. Had a couple of nice letters dictated by Affa.

How about a letter from you in answer to mine asking if we can get together this summer. Here is a tentative itinary for us this summer. We expect to leave here on or about June 15th and by easy s stages go north to Bend Oregon. Then to Pend O'Reille for a few days. Lea the Small Traler and by car run up to Vancouver. Be gone about a week and then return to Lake Pend O'Reille Idaho for about ten days. W could meet you somewhere on a main Highway at any time you suggest. Also would arrange the time element. How about the middle of July. At the lake we expect to camp just a few miles west of Hope a town on the north end of the Lake. Lets hear from you. Ethel joins me insending lots of love to all of you.

AS EVER

Harry & Ethel

McCall, Idaho.
Aug 1st 1960

Dear Wib & Murl:

Was very glad to receive a long looked for letter from you folks. It was quite a disappointment to hear that you could make the trip west this year. There are so many things we could talk about. But perhaps, as you say we may make it next year. With a great deal of activity coming in the near future in our purchase of a new Mobile Home we have to get back to Santa Barbara by Sept 10th and could not possibly go east. Have had so many invitations to visit our or I should say my relatives, we just would have to start early.

Would like to hear more about your Gravity Deal. Fry feels that he could accomplish a great deal along that line if he went into it but that it is something that should be left alone at this time. Too dangerous.

Have heard from Affa at intervals. His messages are very interesting and instructive. He says that he is thru with contacts personally and has an assistant by the name of Moriaden who wrote me his first personal letter a short time ago. Said that he hoped in the not too distant future to meet personally those of us who were in contact. This sounds wonderful and any time he desires we will be on call. That would be the final chapter in my experience. Yours too I imagine.

This is a beautiful place. Mile high and never too hot. Lots of trout for the catching. But why twist you when we cannot all get together.

Ethel will write Murl soon. She is occupied with some new ideas for Cards etc. That gal is sure one artist. I have just given a new Gadget to a Promoter to see what he can do with it. He says that there has been no unfavorable criticism and that it looks good. If it clicks I will send you one.

We plan on locating at a place called Paradise next Spring, but will be in Santa Barbara for the winter. It is located a hundred miles north of Sacramento, and ten miles east of a town called Chico. If you care to look at the Map. Elevation twenty three hundred feet. Right in the tall pines. Lots of retired people located there. Just a little over a day from Santa Barbara and our boys. We have looked all over the state for a place to locate permanently and this seems to be right from every angle. Besides they are now building a new Mobile Home Park that is the latest design etc.

Our very best to all of you from both of us.

As ever

Harry & Ethel.

Box 51, City View

October 21, 1954

Dear Mr. Gesner,

I wish to thank you very much for your letter of September 18, and October 1st, and for the tape, which arrived in good order. I have been quite busy lately, hence the delay in replying to your letters.

I have not yet had a chance to look over the tape material with an oscillograph, but I did play it through. I do not quite understand what it is all about but maybe that will come out as the study progresses. It is quite possible that the material on this tape may provide a clue to what we suspect; that the Saucer People use a time scale which is slightly different to ours. According to our latest information the use of cosmic spin as an energy source will produce a certain foreshortening in the time scale of the matter affected. It is a complicated business and we are just feeling our way as yet. Hence we welcome anything which might serve as experimental information or mile posts along our way.

We know that to express ordinary matter as we observe it requires at least nine dimensions. (Conventional physics seem to be flummoxed by the mere suggestion of more than four!) But while we can work out much of the basic physics we appreciate observational confirmation of our work as we go along. We feel that we can get much help from these people if we work things right, having already obtained quite a bit. I would deem it a great favor if you would continue to send along anything which looks interesting.

We closed down the saucer station because it had served its purpose as was contributing nothing that we did not already know or could find out from other sources. Also, it was a focus of public attention which we feel is most undesirable at the present time. The instruments are still intact and available if we get any bright ideas.

With your permission I propose to make a copy of the tape for our own intensive study, and then return the other to you in the near future. I shall drop a line when it leaves here so you can look out for it. Again many thanks for making this information available.

Yours sincerely

W.B. Smith

Harry M. Gesner

Post Office Box 51
City View, Ontario
November 30, 1954

Dear Mr. Gesner,

Many thanks for your letter of November 4th. I held off answering it because I rather expected the other tape which you mentioned, and I am still looking forward to hearing it.

I still have the tape on the various frequencies, but we haven't been able to do much with it. The difficulty is lack of precision as to just what the sounds are and the significant features regarding them. Furthermore, it appears that the earth's natural frequency over rides all the others and unless we know much more about the matter than we do at present, any work which we might undertake is little more than guess work.

I was very pleased to hear that you had met Mr. Fry. I would certainly like the opportunity to meet him, and it may be possible to arrange such a meeting. I already have quite a bit of information regarding the saucer power plants etc, and I have hopes that we may soon make some use of it.

A bit of information that you might pass along to Mr. Fry, if he has any ideas about building a saucer power plant, and this is to check carefully the field relationships pertaining to the matter which he would use in the critical parts of the ship. You see, all is not quite as it seems, and our conventional ideas about electric magnetism, gravitation, and time are not entirely correct. Furthermore the saucer people do not realize that we have these odd ideas. They assume that because we have made a certain amount of scientific progress that we do have basically sound ideas, which our group knows is not correct.

Incidentally, I would appreciate it very much if you could get any information on the two satellites which the earth is supposed to have acquired recently. It is possible that being so close to Palomar there might be something which they have which has been released.

With kindest personal regards

W. B. Smith

Harry M. Gesner

4015^{xxx} TOPEKA DRIVE
TARZANA, CALIFORNIA

Dec 15th 1954

Dear Mr Smith,

Glad to hear from you again. Guess we shall have to for the Record of the frequencies. The word came thru that corresponds with theory. Our frequency predominates and that is that.

The Fry Tape was ret'd to me in rather bad shape, due to handling in the P.O. Dept. I have written to Fry asking him to send me a pamphlet has just issued which contains everything on his tape. Am expecting it day now. Will forward it when rec'd. They said it was not the right address.

Fry will not build any Saucer himself. He says that he is willing to give out the info, but as it would ultimately be used to kill he will construct one. The Power, he feels should be known to a few like yourself.

Dorsey as usual, knows every one. He gave me the name of one of the men at Mt. Wilson. Using Dorsey's name I found him very courteous. I can get your info. Was told that you should write to Dr Humason, 813 Santa Anita St Pasadena, Calif, Stating that you are a Scientist connected with the Canadian Gov and Mr Humason will give you whatever Info is available. He'll do it. I feel it would be worth your while.

Twenty fairly large lights were seen in formation maneuver above the desert south of Palm Springs last Thurs. Three of our friends watched them for five minutes or more. Quite high. Mrs and I spent five minutes in the desert watching. Too cold and no Saucers. This month is supposed to be a good one for sightings. I have a Photo of a new type of Saucer that has never been caught before. Will mail you one within the next day or so. It looks like what appears to be a sort of Fin or rudder. Question is, whether it is a rudder or as I have a hunch, it might be an experimental ship with a foil

divider of some kind.

I mentioned some time ago that if you have anything new if
you can release send it along. Dorsey and I will treat it as confidential

Wishing you a Merry Xmas and the best of everything for the
New Year. I am,

Sincerely

Harry M. Gesner

too bad. Not entirely satisfactory either. Fry says he will help and
you can stay with us while you are in this section. I can arrange co
and have the transportation.

Sincerely / B. L.

Dear Mr. Gesner,

Many thanks for your several recent letters, photo, and book. I found them most interesting. Do you want me to return Fry's book?

You enquire if the story about Canada building a space ship is true, and I can honestly say that I know nothing about it, and I doubt very much if it is true. You see, I probably know more about the behaviour of fields and various angles of attack than anyone else in the country, so I just can't see them doing anything I wasn't in on. However, I do hope to be able to do something myself with private capital in the near future, but that is far from settled. Canada did some work on a circular airfoil ship at the AVRO plant near Toronto, but abandoned the project last fall.

We have been in touch with one group of the space people. They know of Alan but they are not directly associated with him. Apparently, the time for us is very short and there are several groups who have an interest in the outcome. Most of them are friendly, but there is at least one bad lot who are bent on exploitation. These latter have a base of some kind near North Bay. However, I am afraid that there is precious little that we can do.

We were told however, to expect a change in our time scale, starting this spring. You see, time as we know it is the result of the operation of a "time field" which resembles closely electric and magnetic fields. The thing which Einstein considers as the fourth dimension is really an entropy vector which we have trained ourselves to consider as time. We do not know how fast the time scale is to change but we already have indications that it has shifted a fraction of a second. You might ask any of your scientifically minded friends who work with time functions to keep an eye on this matter.

We are at the present time investigating a type of radio transmission which we were told about and which seems to have the most fantastic properties. It is capable of MENTAL direction. Of course we are still in kindergarten but I think we can learn. I hope to be able to set up a circuit between Ottawa and Tijeras, New Mexico.

I shall write again soon, and in the meantime, many thanks for your continued interest. Best wishes for a satisfactory New Year.

W.B. Smith

Feb 19th 1955

Dear Wilbert:

Recd your most interesting letter. I get a lot of pleasure from your letters. They surely are instructive. You, thru your education along Electronic lines are very analytical. Keeping ones feet on the ground prevents a possible deviation from the true values.

Sent you the book. Altho it deals with what could be, it opens new lines of thot. One can learn something from everything that causes real thinking.

In respect to sending you the names of those from other planet I shall forward them to you as quickly as I am able to pick them up. The first name is "Strom". He has been contacted several times by a lady whose name is Mrs Grace Frankel. She lives in Encino, Calif. We know her quite well. Strom is a sort of Missionary and his mission here is to help certain people who are very advanced. He told her that he had left his ship at a place names Box Canyon. I know this place and it would be a very logical location. I understood her that he now leaves it in the desert as the first place was becoming too public. Am trying to arrange thru her for a personal contact. He seems to be reticent about other contacts. However she likes both my wife and I and we may be able to work it out. Alan, you know about. There is a fellow from Venus by the name of "Vesta". I mention him but have nothing definite. He has promise to contact us? Wrote Adamski last evening. He may contribute. As soon as Dorsey comes back from a business trip to the desert and Tuscon I will have the name of a Mars man who contacted one of the Forestry men three times.

These names are not at all easy to get. I know you are aware of this. Of course we previously did not make any special effort to get them and now have lost contact. The man Wheeler who was connected with the Steel plate incident, did not give his real name. I have traced this down and there is no doubt at all as to the story being boni fide.

Very few sightings have been made lately in this section. We have been assured tho that this spring and summer will bring twice as many as at any time previous.

I sold my Trailer and hope to purchase another larger one some time before we leave for the summer. We havent decided just where our destination will be. Likely in Minn and then to Fla. If things work out and finances permit we might take a run up your way before fall. In the meantime let me know whether I can be of assistance. The Mrs wants to be remembered to you.

Sincerely

Harry

FORM 654-33

February 27, 55

Dear Harry,

Many thanks for your last letter and the copy of the book on Space Gravity and Saucers. I read both with great interest. Thanks for the names; I shall check against names from other sources to see if I can turn up other angles.

I do not agree entirely with Mr. Cramp regarding his basic premises but I do think he has done a great deal of unprejudiced thinking and in some places has come quite near to what I feel to be fact. I propose to write to him and discuss his theories in more detail. It is possible that after I pass to him what I have turned up, he may be able to peice enough together to prove a point.

Incidentally, I notice that the two latest issues of Physical Review contain very significant articles on Space Time and Gravity. They are still groping but well on the way. I propose to write to each of the respective authors. I can't help but feel that at least a portion of the technology is just around the corner

I have been quite busy lately trying to fit mathematics onto the basic principles which I have found out. Much of it comes from the saucer people themselves, but since their way of life, logic and mathematics are quite different from ours, I find it very hard to fit it together. I feel very much like someone trying to learn a subject with which one is only vaguely familiar, by studying a text written in a language which is totally unfamiliar.

As an example; we think we have a pretty good idea of what TIME is, but after studying even a little bit of the Theory of Relativity, our ideas fog up. Now, I find that TIME is a field, like electricity and magnetism, but Ah me!, that isn't what we observe. What our clocks and calendars show us is an entropy scale which is the resultant of TIME FIELD operating on matter. So even the relativistic approach to TIME is nowhere near adequate.

There is another point to consider, and that is what appears to be a fundamental cosmic law; NO information can be passed through any intervening means or medium unless that intervening mechanism has been coded to carry that information. In other words no saucer person can tell us anything about his way of life or technology unless the individual receiving the disclosure ALREADY HAS WITHIN HIS EXPERIENCE OR KNOWLEDGE the concepts and terminology applicable to it. This seems to apply equally to a person to person contact as well as information passed second and third hand or even through machines. I am sure you will appreciate this point after you have thought about it a bit. Some learned man a while back remarked that there was no royal road to learning, and I am convinced that this is only too true.

I find my best method of work to be; work out the basic principles as well as I can, making my own terminology as I go along, and then when opportunity comes, check it with the saucer people. I am then 'coded' to pass the information, and I soon find out if I am right or wrong and where. I have already been set back on the rails several times. I would suggest that you pass this bit of information along to the other investigators with whom you are associated, as soon as you have convinced yourself that it is true.

I am enclosing a money order for the book, and again, many thanks.

Yours sincerely

Wib.

Harry M. Gesner

TARZANA, CALIFORNIA

May 28th 1955

Dear Wilbert:

I guess I must be off of your welcome list. Sorry for I surely miss your most interesting and informative letters. Both Dorsey and Myers inquire often whether I have heard from you lately.

Harry Myers has his Reciever and we have both tried it out alternately. A week each time. So far we have recd no contact. Have been told lately that they know us and have been able to contact us without our knowledge. That it is not necessary for us to have the Reciever and when they are ready will greet us personally. I am holding this letter for a couple of days. Something is supposed to happen thru this friend who has made several contacts. The Space people told her to invite both Myers, Dorsey, Ethel and I to a meeting this week. She was told to refrain from telling us anything further. So all in all it is quite mysterious.

A couple of sightings have been made here in the Valley lately but we havent had anything. The Mrs is getting quite Phycic. All I can do is Listen. You seem to be getting the real essence of what they have been trying to put across for a long time. We all of us agree that you have the right understanding of the theory as well as its practice. Send us more.

Adamski's new book will be out in a few days. He says that it deals principally with the Saucers motive power and structure. Have ordered one and if it is up to standard and you wish one will send it. Altho I have not seen him for several months he sends word to me quite often.

The way the weather is this year we cannot decide whether to try any long trips. Our invitation still holds good for your trip to the coast.

Not having heard from you lately it is rather difficult forme offer any continuity. I sincerely hope you are making progress and at the same time the contacts are educational.

Sincerely

Harry

June 12, 1955

Dear Harry,

I guess our last letters crossed in the mail, as I got yours just the day after I sent my last one. No, you are definitely not off my list, as I enjoy very much hearing from you. However, I must confess that I am not always as prompt as I should be in answering letters.

I am rebuilding my gravimeter in the hopes that it will be a little more stable. As it is now it is about 100 times as sensitive as the usual commercial units, and consequently much more tempermental. I want to use it to check time field changes, as such changes should reflect in the gravity measurements. I understand that we are due to get some tempic field changes shortly and I want to be in a position to observe and measure. With numbers I can extrapolate and maybe get some advance idea of what will happen and when.

The space people are either planning something or expect something of significance to happen soon, because, through my many contacts, most of which are quite unknown to each other, I get the same story. I beleive that it has to do with the time field, and when a certain adjustment is made then they can safely land without all the bothersome preparation and conditioning which they must go through now.

Dr. Stedman has completed a comparison spectrograph, using the direct comparison between a prism and a grating on the wavelength of the strong mercury ultraviolet line. He reasons that since the grating is a wavelength (length) device, and the prism is a velocity ratio device (length/time) the relative position of the lines should change with a change in time field. His spectrograph has been in operation only a week so it is too early yet to expect results.

The Bureau of Standards has already found on the basis of spot measurements that the time scale as of last December had increased about 57 parts in one million but I suspect that there are fluctuations as well as a general shift.

I shall be very interested in Adamski's book when it is released. Inceidently have you read Jessop's book, The Case for the UFO?

So far as psychic contacts are concerned I feel that they are merely variations of perfectly normal communications, but using means which we don't understand. I have personally encountered this faculty in the hands of the saucer people, so I know its real.

Must close off now as I still have a couple more letters to write.

As ever

June 30th 1955

Dear Wilbert:

Am enclosing a description given me by Dorsey. It is his opinion and description of the Aga Force. He may be away off in his theories but it is something that forces one to think a bit. It answers some, if not all of your questions.

Dorsey has lately renewed his acquaintance with one of the Dept Of Forestry men who has made four personal contacts with Space men and their Ships. Two a year or so ago and two lately. He is very reticent about saying much except to Dorsey. He is afraid that the Dept will be antagonistic and it may effect his job. They evidently know of him and trust him. I mean the Space people. The last two contacts were by Ships from Jupiter, a 150 Ft outfit and the other was from Pluto a small scout ship. He was invited aboard the large one and noted a number of things that were most interesting. Dorsey was getting ready to go to Utah and could not go into details. He did say tho that this man found that the men were very similiar tous and were very polite. He noted that the Guages on the instrument panels were very peculiar and not readable to us. If you could get down this way I am sure it would be well worth while. Both Dorsey and Myers are away for a month or so but would return is you came. I am sure.

Altho you cannot state your progress in writing I feel that you are gaining what you have been after. Could you convey to your friends my desire to have them make a personal contact with me. I have been told by persons they have sent to me for info, that they know of me. This may be all right in its place, but I certainly have to take too much on faith.

One of our Broadcasters who is considered reliable gave out

the info that both the men and ships had been photographed down in Venezuela and that thirty of our top men had been sent down there to investigate. Too bad that our top Brass have taken the attitude they are at present following. indy Vail a friend of ours has to keep his motion picture of one, under cover. We can have it available to you tho.

Adamski's book will be out any day now and I am in line for the first issue. Oh yes, Dorsey is going to try and get that fellow I just wrote about, to make a recording with no personal names mentioned. This, after he ~~gas~~ gets back.

Dorsey said that the day before Mt Asama erupted in Japan, the control of the Aga told them that the Aga Frequency showed a disturbance in its immediate vicinity. It then gave the vibrations with the Cones and the loud vibrations were very irregular.

If you care to have your Steno make a copy of the enclosed and if you will, I should like to have this one back. The Van Tassel angle you can keep for reference. Regardless of the rest of the material in it the Magnetic Field has proven out and can be seen by anyone.

It looks very much as tho the Field changes are already in force according to certain localities. Dont forget to try and arrange that deal for me. I may be wrong but feel I have earned something from them.

Lets hear from you again soon.

As ever

Harry.

Harry M. Gesner

July 11th 1955

Dear Wilbert:

Just a few lines to let you know I have just recieved on of Adamski's last books, Inside The Space Ships. It is quite a book and seems to have a lot of the answers. If it is a fabrication it is the greatest ever published. They will sell by the thousands and within a few days will be very difficult to procure. If you wish me to grab one let me know by return Air Mail and I will get one for you.

I find it very facinating and now will feel the same. As soon as the Mrs finished the latest "Proceedings" will mail it to you. Ther are a couple of items that seem to be worth while.

AS things appear at present we may leave here some time around the last of August and go east and then south to Fla for the winter. Hope to scare up enough cash to get another trailer for comfort on the road.

There seems to be no real summer anywhere around this old U.S. and you have had you bad times also from all reports.

As ever

Harry

July 15, 1955

Dear Harry,

Many thanks for your two most recent letters. I enjoyed the material on the Aga force, but I must confess that I don't understand it at all. I would like to see any pictures which you may have of the force in action.

Incidentally, did I send you our translation of the message which Adamski obtained on the film? If not I am enclosing a copy. We have no objection to you giving it to him or to anyone else for that matter. I certainly want to get a copy of Adamski's latest book, as I feel that every little bit of information that I can get a hold of eventually will fit into place and we will have the whole story.

I am afraid that you are assuming that I have a great deal more drag with the space people than I actually have. While they are quite frank with me up to a point I find that I cannot get them to alter their plans even one tiny bit. I have tried to coax them into making a landing in my presence, but with no success. They tell me "All in due time". Although I have talked to them and they have shown me diagrams and pictures, we have never met face to face. I know what several of them look like and I think I would recognize them if we met, but they steadfastly refuse to be pushed. However, they do know about you and many more in your area, so I feel sure that in due course they will get in touch in their own way.

Incidentally, I have the gravimeter working quite well, and it does show quite a few interesting time field fluctuations. I suppose at this stage they might conceivably be explained away, except for the fact that they coincide with fluctuations occurring on a comparison spectroscope operated by Dr. Stedman, which operates on an entirely different principle. However, the gravimeter is about a thousand times as sensitive and also responds to short term changes, whereas the spectroscope records only fluctuations of durations of several hours. We expect more and larger changes as this year wears on.

If you can snag a copy of Adamski's book please send it along and I shall send you the amount. I envy you your trip to Florida and sincerely hope that you will have a most enjoyable time. I shall be taking my vacation in small pieces this year and probably won't be getting far from home.

Best regards

Best regards
W. E. Best

Tarzana, Calif.

July 22nd 1955

Dear Wilbert:

Just recd your most interesting letter. I do appreciate your very instructive and advance theories as you explain them. Lets keep up the good work. That Gravimeter I can see, is away ahead of anything we have been able to produce up to the present time. I was out in the Hollywood Hills with Dorsey and another fellow. We used a Recorder and an Oscilloscope also several other instruments and were in the vicinity of several Vortices. There was a very definite change in the Magnetic field intensity at certain hours, that changed at the same time each day. This is along your line of endeavor but a bit too involved for me.

Dorsey as I stated before, has been up in Utah and Colorado on an Uranium deal and is expected back today or tomorrow. Myers and I will be with him very shortly after and we will see what can be done about getting some good pictures of the Aga phenomena. He may have some already. It is away down in the desert near Palm Springs and the temp is about 124 in the shade.

The Mrs and I were down to see Adamski a couple of days ago, and had a talk of about two hours. There seems to be no doubt as to his actual contacts and visits to the Mother Ships. He met with a very cordial reception in Mexico City. The Mex Gov is getting out editorials every week and whenever anything transpires in the Saucer angle. They are keeping the public up to date. Too bad we cannot do the same. A short time ago I Telephoned to the Book Store asking them to wrap up your Book for mailing and the Prop whom I know quite well told me that he had just sold a book to one of the top Engineers on top secret work for the Navy and was told that they are spending several million dollars on investigation. Nothing to be given out tho. Can you beat it. We have been hoping that more info might come thru to us personally before we leave.

We have to be here until the man who is purchasing the lot gets

the money on a G.I Loan. This usually takes about three or four months to go thru Channels. You know what I mean. I heard the other day that it might be finished by the middle of Aug. Ho Hum. The way the weather is all over the U. it seems that one place is as good as another. Here it is six oclock and the thermometer outside says one hundred. Glad it is a dry heat.

Had a letter from Williamson and he mentioned hearing from you. Wilbert, I do not believe in being critical but I do want to say something in the most friendly way. Rick is a very fine fellow in many ways and I do admire his ability. However be very careful in giving him anything confidential. He has a tendency to get enthused over something and in lecturing will use it as his own and often give things to the public that he should keep to himself. I am not alone in knowing of this. Nuff sed.

Thanks for the Translation. I dont think that Adamski has a good one. Also for your word that the Space men know of me. Adamski has also said that his experience has been the same as yours in that they cannot be changed in any or depart in any from their plan of procedure. They say that everything they do is carefully planned and there is no reason for changing. Not a bad idea at that. I would appreciate your reaction to Adamski's book.

Guess that I have covered the subject for this time. Mrs G asks to be remembered. Oh yes. If I get to N.Y. State during good weather I may run up your way. Will contact you first tho. Phone or Tel.

As ever

Harry

Have you tried to get any tape or messages from Space?

August 8, 1955

Dear Harry,

Just received the book and have read it through once. I agree with you that if it is a fabrication it is a most amazing one! The descriptions of the various devices in it mean quite a bit to me, more perhaps than they mean to Adamski. I would sure appreciate an opportunity to visit one of the ships.

I did notice that during the course of several of the conversations, if reported accurately verbatim, the question of time fields was very carefully skirted. I would like very much to know the reason. In my own contacts the space people seemed surprised to learn that we did not know of these things. Apparently it did not seem reasonable that we should know as much as we do about the electric and magnetic fields and nothing at all about the time field.

There is something which I consider quite significant, and that is the basic underlying philosophy which seems to be identical no matter through what source it arrives. Now I have records of trance speeches from a Martian control Areneshere which give many descriptions of the Martian culture and way of life and basic philosophy which are in general agreement with data from other sources. Also, I have much material from the Mark Probert controls which also fits very well. So when so much is held in common I am inclined to think that it is probably correct.

Thank you very much for your comments regarding Williamson. However, I am not particularly worried, because any information which I pass along I have no objection whatever to it being made public. Affa was quite upset that Williamson published the material on their contacts prematurely, and consequently promptly broke off contact which since has not been renewed. But the material I get from Affa and Ponar etc, is clear or I am definitely told that it is in confidence. Much is left to my own judgement.

Incidentally, I shall be most pleased if you could manage a visit while in this part of the country. I plan to be away for the last week in August, vacation and saucer business I hope, returning to Ottawa after Labor Day. Again many thanks for the book. Enclosed is money order for same.

As ever
W. Herbert

Tarzana, Calif.
Oct 15th 1955

Dear Wilbert:

Here we are back again in the old place. Had a very nice trip north. Went as far as Kamloops and Okanagan. Canada is a fine country if it were not for the winters.

Heard your name mentioned several times and very complimentary. I did not appreciate how important you really are and how busy you are. Philpott gave me the inside on your activities. No wonder you are so doubtful about getting down this way. We are now again planning on the possibility of getting down to Fla this winter for two or three months. If finances work, out we go. Otherwise we grin and bear it.

Dan Fry is now working on another book dealing with Gravity Time and Space. My friend Myers says that Dan read some of it to him and it is really advanced on the tie in. Gravity is really Magnetic as Dan says. Dan will send you a copy of the book as soon as it is published.

The wife and I are getting a bit nearer to a contact with a Venus chap who is in this vicinity. We have a friend, or I should say, two lady friends who are in constant contact with him and several others.

I asked thru Bette Stone the one we know best if they would allow me to send their names to you. They know of you and said yes. They are

Vesta-Venus. Yasmon-Venus Doro, A Lady from Venus. Lounna-Neptune
Nu - Saturn Um or Ulm Saturn Zo-Mars Zoe-Interplanetary

and the Tribunal Council from Saturn. Vesta is keeping tabs on us and says that we will be contacted in the physical soon. You know how they are with time and soon could be years. However Bette was up here the other morning and was in communication with Vesta while here. He and one other have developed both Bette and her friend to the state where one would have to be present to believe it. It is utterly fantastic. No medium stuff at all. Just regular conversation. He, when he visits Bette's home still remains in the fourth Dimension. Jack her husband has felt his physical form with his hands altho he could not see him. And Jack is very much on the Show Me style. Vesta would not allow Bette to tell us about him for a long time and now has given her permission. So I feel sure that I am not violating his wishes in sending this to you. They have a sure way of some kind in keeping us under supervision and scrutiny. This is therefore for you alone.

I have kept it from Myers until Vesta says O.K. He says that Adamski has given out the real material as given to him from Space men.

Oh yes. Bette's husband Jack says that his hand felt as cold as ice when he felt of the arm and shoulder of Vesta. Bette says the same. Evidently the vibratory rate when in the fourth is quite high or low.?. V says that next year they intend to make hundreds of physical contacts. They are determined to make us familiar with their appearance etc.

While in the north Dorsey left here for Arizona to do some work. He told me before leaving that upon his return he would give me some 16 mm film or Flash pictures of the Cones in action.

We hope to leave for Fla around the tenth or fifteenth of Nov. My new Sportsmans anchor has been accepted by a large outfit and this angle will delay us. You know how it is with Patents. I am also working on another idea that I hope will Gel.

If you can find time I should like to hear from you before we leave. In the meantime. Good Luck.

Sincerely

Garry

October 25, 1955

Dear Harry,

As you are now back home I am returning the pamphlet by Harry May. Many thanks. I had a copy made for my own information and will add it to my archives.

Thank you for the names. I much appreciate this information as it will enable me to carry on with my checking; not ckecking up on THEM, but on the general overall Plan.

I shall be interested to see what Fry has to say in his new book. There is one thing that we must all watch and that is the correct use of words. I think I mentioned it before. To these space people all effects of the three fields, electric, magnetic and time, ~~and~~ referred to by them as magnetic, and the seperate fields are dealt with as operators. So we could easily be misled by this difference in nomenclature. Of course we could use their mathematical concepts and methods, but it would take a bit of training. I personally think we would be ahead for the time to try to translate into our more familiar concepts.

Dr, Stedman as just completed a simplified version of a gravimeter for the purpose of checking on time field variations and I have it at home and just placed it in operation this evening. It will be the better part of a month before I have any results to note. I am expecting some fairly large variations in the not too distant future.

I am very pleased that your anchor is a success. I hope that you will be able to make your trip and I shall be very pleased to hear from you whenever you can spare a few moments to write.

As ever

Willard

Tarzana, Calif.

Oct 24th 1955

Dear Wilbert:

Your most interesting and welcome letter recieved. Thanks for your comment on Ray's article. It was very interesting.

Dan Fry is completing another Book along strictly scientific lines with material furnished him from outside. Harry Myers my friend who is constant contact with Fry has read part of it and says that it is one fine example of advances principles. I dont know whether you are in contact with Dan or not. If you will accept a suggestion I feel it would be to the advantage of you both to start a correspondence. Dans address is Daniel Fry, 4720 N Peck Rd, El Monte, Calif. Dan may send you a copy anyway. You could mention that I gave you his address.

Williamson, is apparently having a bit of trouble which seems to originate from something he may have done to displease someone. More of a physical than otherwise. His faculty for using names for the purpose of boosting his ego could be a contributing factor. I feel sorry for him. The disappearance of that Goo is similiar to the cobwebby material that went the same way and was collected here a short distance from our place looked like a web coated with a silvery skin which faded away shortly after being touched. I saw some but could not keep it. It was seen to fall from a Saucer in the form of a blanket shaped cloud.

I hope my letters are not becoming tiresome. I know how much you desire new angles so as long as I can get something I like to pass it to you before it loses its interest. Here goes. Dick Miller the fellow I wrote about and who spent the thirteen hours in a Saucer, was out to dinner last evening. He is a fine fellow and incapable of saying or doing anything not clean and above board. He made a Tape for us that is a dandy and both Myers and I consider it the finest we have, not excepting Dan's. At the same time one of the space men he met on the ship, thru his fantastic ability to do as he pleased with mens minds took over and gave us a sample of his ability. I acted as questioner. His answers were given without reservations. This is something new. It seems that they have now decided on a new procedure for making the people of earth Saucer conscious. The Tape will explain. It looks as tho the decision is to who goes on the trip to Mars rests between three of us. Myers, Mrs Whitehouse, a writer and a very nice person, and myself. Of course each one would like

to be selected. However knowing how seldom any of us can guess correctly and in accordance with their way thinking it might be anyone of the six of the group.

Here is the deal I am working up to. If you feel it worth while for me to have a copy made of the Tape and send it to you, let me know as quickl as possible as we intend to leave for Fla around the fifteenth of Nov. Of course if I should be selected by whoever decides for the Space people, our trip will be cancelled. Cameras, Recorders etc will be allowed. They are going all out from all apperrences. Besides, they have never misrepresented anything to Miller. He is to head the group. Dan Fry will likely be included.

This should awaken you a bit. The cost for the Tape and reel will be nominal. Will take a twelve hundred foot one.

As ever

Harry

October 28, 1955

Dear Harry;

I was very pleased to get your latest letter and to hear of your contacts. I shall, of course, be very interested to hear more.

Thanks for Mr. Fry's address;; I shall drop a note to him as we may be able to compare facts and fit a few of the pieces together in the jig saw. I shall try to get my tape on the time field to him as it might be OK for him to have it. We shall see.

I shall be most pleased if you would have a copy made of the Dick Miller tape and send it to me. I shall be only too pleased to defray the costs. I want to get as much as I can of authentic information so that I can fit it together. I have many of the bricks now and some mortar, but still not enough for a comprehensive structure.

I also have had experience with these folks ability to project mental pictures etc. I have been shown quite a few of their machine elements, television, cloth, etc, as well as some of their manufacturing methods. I must say that ingeneral they are much simpler, more direct and ever so much more efficient than ours. It all stems of course, from a much better knowledge of basic physics, which we just kid ourselves that we have and don't. I am naturally itching to make up some of the things, but I am told to have patience, that the time is not yet ripe.

I certainly envy you the prospects of a trip to anywhere off this planet, and I sincerely hope that it comes off OK. I hope the pictures will be all right but remember that in regions where the time fields are not constant, light DOES NOT travel in straight lines, and cameras cannot be expected to give true images. (Refer to the pictures taken and reproduced in Adamski-Inside The Space Ships). I would suggest talking this point over with your space friends before you try to take many shots.

All for the present,

Wilbert

Tarzana, Calif.
Nov 21st 1955

Dear Wilbert:

Just a few lines to say Hello. At the request of the men above, we have changed our setup a bit. We have the larger group meet here every other week and our select group composed of six meet the alternate week. Last Wed nite was perhaps the most interesting one in a long time. I dont remember whether I told you that I asked whether they knew you. The fellow we were talking to said he knew of you and that you were on the right track.

They told us that everything was arranged and that very, very soon the trip would be taken. From what they said it looks as tho Dick, Meyers and myself with one other will compose the first group. Other groups will follow later on. I was told that if I desired I could take the trip east we had planned, and that they would pick me up along the line if their starting coincided with our trip. However I should be very foolish to go under the present conditions. Besides finances are to be considered.

They told us not to minimize the importance of the info etc we would bring back. Also the necessity of being very cautious regarding how and when we gave it out. Dick and I were talking it over Sunday. He suggested my asking you what you felt would be the most conclusive evidence we could bring. Something that would be hard to refute or to ignore. Will you let me know your opinion on this. Also on my own I would like to know, if you were convinced, afterward, that we had enough material to warrant it, would you go all out in saying so. I realize your position and would not want you to jeopardize your position in any way. Of course Adamski has been allowed to establish a precedent in a number of ways. Keyhoe the same. This may make it a bit easier to publish the results. We are in a quandary as to how to handle the deal. In view of the attitude of the Gov. The men above say that they will make it easier for us. We also know that we have

to do our share. It is astonishing how they can arrange conditions to suit emergencies. I have had very tangible evidence of this.

Hope you recd the Tape all right. A Tape was sent to me from Nyack N. by a very good friend of mine. I did not receive it and have been wondering whether it possibly could have been intercepted.

Guess I have written enough for this time so with best wishes I am.

Sincerely

Harry

November 25, 1955

Dear Harry,

Many thanks for your letter of Nov. 21st. I am certainly pleased that the plans for your trip are going well, and I certainly envy you the opportunity.

As far as evidence is concerned, I know from experience that when people choose not to believe there is no evidence which will convince them. From my own point of view I would prefer to see the evidence myself before assessing it as to what could be done with it. You see, I have had some experience in this line and I am not at all optimistic.

I have discussed the problem with my group here and we came up with this suggestion. Obtain several 16 mm movie cameras which are capable of single frame operation, and right from the start take single shots at about 1 per minute or oftener if film is available, right throughout the ENTIRE trip, making sure that there are quite a few frames overlapped between two cameras at the end of one reel and the start of the other. These duplicated frames should be taken from slightly different camera positions so as to show perspective and to establish the continuity of the sequence. A tape commentary accompanying the more significant shots would be helpful. You will have to watch the exposure carefully USING A PHOTOELECTRIC METER and remember that the focal length of lenses change with changes in the time field so that corrections must be made otherwise the pictures will be horribly out of focus (See some of Adamski's pictures) The formula for correction is straight forward; Focal length in space = focal length on earth X the ratio of time field in space to time field on earth.

Naturally, pictures will be questioned, as they can easily be faked, but it would be out of reason to fake ten thousand shots for a week's trip, if all of them represent different views and many show 3D. Even Hollywood would find that a pretty big chore!

Other evidence would consist of machine elements, such as "gears" "bearings" and the like if you could get them to give you samples. I know how these are built and they are much different from ours so samples would be pretty valuable. Bits of their alloy materials would be interesting particularly the one they call mabonite.

If you can produce evidence which I think is sound I shall have no hesitancy in putting it before the real top brass in Canada, but it has to be good!

With the best of wishes

W. Herbert

Tarzana, Calif.
Dec 5th 1955

Dear Wilbert:

Your latest letter recieved, also Chsck. Thanks. Both welcome. Time is now running out so will get this off so that I may recieve an answer before the time for leaving arrives.

Last Wed evening we were told that unless something unforeseen happens, Miller, Meyers and myself would leave in January. I suppose that perhaps Mars will be in a better position at that time. Weather might either be an advantage or otherwise if stormy. This really should make no difference. I had picked out a good landing field and was told that it was no problem as they had charted several hundred in the U.S. and several that were accessible to us. They also told us that our three were to be given a great deal of scientific material. Strictly secret. We were asked whether either Meyers or myself had experienced anything out of the ordinary. Dick had been thru it. I in turn asked what they referred to. Both the Mrs and myself could not sleep until two in the morning and both had an increased beat in tempo of the heart. Meyers the same. They said that they had three ships overhead, with one to each home and that they were beaming us with a conditioning which they considered to be needed. They seem to be determined to go to the bat in getting their plans across. You no doubt are fully aware of this. This coming spring and summer they plan on putting several thousand space ships overhead for anyone to see. We shall likely have more info after our return. They say that they have an immense one that they may bring along. Have you anything along these lines.

Lets get to the important part of this letter. Your comments and info were very instructive and helpful. I thank you very much. I have a three lens turret B & H 16 Mm camera. 1.9, 3" F4 Telefoto and a F2.7 each can be focused seperately thru seperate eye piece. That should take care of the distance deal. My meter the time of exposure. The others have fairly good eight M M cameras. However your idea seems the best so they will get or rent 16 M m cameras for the trip. The power for Tape recordings may be a problem. We shall ask this week or next. This could be solved with a Police model Wire recorder, which is battery powered. Will be investigated. Spools are easily carried. I shall take 500 feet of film and as you suggest will snap in sequence etc. We will also keep the film and wire in metal containers. They know more than we do about this angle and will advise us..

As to samples of material etc. I shall remember this angle. We feel that from their attitude so far we will be given every opportunity for getting plenty of proof. I have quite a collection of curios etc from all places and as it is a hobby of mine you can rest assured that anything worth while and unusual I shall ask for. No tricks tho with those fellows. They will supply us with clothing before we land and the Ship will be our home while there. They say that three days will be sufficient but this may due to the fact that the others have to be back on their jobs. I will stay a week if allowed to. Here is another angle. Upon our return we shall have to be very careful with out, shall I call it, material. If you are willing we may put duplicates in your hands for safety. These angles have to be considered. You realize how valuable they will be. We have arranged for the originals to be developed here under personal supervision.

I think the subject has been covered fairly well. Thank a lot to you and your group.

Sincerely

Harry

December 11, 1955

Dear Harry,

Your letter of December 5th, is most interesting, particularly with respect to the working over the boys gave you. From your description I guess they were subjecting you to a changing time field to see how you would react, biologically. I presume you appreciate that these people make use of time fields which are many times greater or less than the one which prevails around the earth, and they may not know just how we folk would react.

With respect to cameras, I don't think you realize what variable time fields will do to them. Remember that in an ordinary camera the lens may have a focal length of about an inch, and the complete built in focusing range may be less than 1/10 inch. If the time field doubles the focal length doubles, and in the camera with the 1 inch lens the picture would try to form about an inch behind the film! If you use cameras with lenses in them besure you ask the saucer folks to restore the time field to within 1% of the earth value. The alternative is of course to use pin holes instead of lenses, but such would require increasing the exposure time to get enough light on the film. Again if the hole is appreciable the focus wont be good. Also note that if the time field increases films get more sensitive in direct proportion. I would suggest that you try a pin hole camera just to get the hang of it.

With respect to the material which you collect I will be pleased to assist in any way possible. It might be just as well to let me keep duplicates and sensitive items for you, particularly in view of the attitude taken by your airforce when they think they can get their hands on anything. I enjoy a position of confidence in Canada and I am sure that there would be much less risk in me keeping it. Also, I think I would have a pretty good chance of convincing my government of its significance, as a means of missionary work.

I sent AFFA a copy of INSIDE THE SPACE SHIPS, and he verified practically all of it, and added quite a bit of ancillary information, so I guess it is OK.

Must close for the present. I wish you the best of luck on your trip, and in the meantime, the compliments of the season to both you and your wife.

As ever,

Wilbert
