

in 1½ minutes. Object was viewed through 7x50 field glasses and a red flashing light on top and a green flashing light on the bottom were observed. Through the glasses the object appeared about the size of the full moon. There was no sound or trail.

CASE XXIV, REGINA, SASK., DECEMBER 31, 1952, Weight 76%

The Meteorological officer and Air Traffic controller at the Regina Airport observed a luminous circular object subtending about 8', travelling downwards to disappear beyond the horizon at 3.10 AM, M.S.T. It travelled the first 5 degrees of its downward arc in 4 minutes and the last 5 degrees in three minutes. There was no additional detail visible through the field glasses.

CASE XXV, REGINA, SASK., DECEMBER 31, 1952, Weight 76%

Approximately 20 minutes after CASE XXIV at 3.30 AM, M.S.T., the same observers saw another somewhat similar object descending towards the horizon covering an arc of about 15 degrees in 3 or 4 minutes. This object seemed to fluctuate in brilliancy with about a 5 second period, appearing larger when brighter. The colour of the objects seen in CASES XXIII, XXIV, AND XXV was similar to that of a harvest moon, and about the same intensity. The objects definitely were not associated with the only aircraft aloft at the times of the sightings.
