

newly emerging African countries which have not reported UFOs.

UFOs have been reported over large cities, small towns and rural areas.

Q: What time of the day are UFOs most frequently reported?

A: Most UFO reports are generated between dusk and dawn and daylight sightings are comparatively small in number compared with the number of reports generated during the night and early morning hours.

The famous Trindade Island, Brazil, photographs were taken by Almiro Barauna, aboard the Brazilian Navy Ship "Almirante Saldanha" at noon on January 16, 1958. These three photos are three of five taken and there were two hundred other witnesses to the object's flight over the island.

Q: What do UFOs look like?

A: The most frequently reported objects fall into four categories:

1. Disc-shaped
2. Egg-shaped
3. Cigar-shaped
4. Spheres

However, triangular-shaped objects, Saturn-shapes as well as rectangle cones, football-shapes and square shapes have been reported. The drawing of the Freeport, Long Island object on the following page of this brochure illustrates the football-shaped UFO.

Q: How do UFO night reports differ from those seen during the daytime hours?

A: Objects seen at night either have steady or blinking lights or glow all over. The Strauch photo seen on the last page of this brochure is an excellent example of a disc-shaped UFO photographed at dusk. The Paul Carter case, illustrated on the following page is a good example of a UFO exhibiting steady lights.

Q: Have UFOs been photographed?

A: There are allegedly many photos of UFOs in existence, but unfortunately most cannot be authenticated. One of the few sets of sequential photos which is well documented and authenticated is the Trindade Island set, shown above.

Another example of a set of sequential photos of the classic disc taken in the daytime is the Yungay
