Dear Sir,

There are a few articles in your fall 1970 issue of "Canadian M.F.O. Report" that demand comment. I was present in Ottawa with ~~other~~ members of the Ottawa New Sciences club when Mr. Mathews examined the Metal. The statements in the above mentioned report are when taking into consideration the way in which the ~~the~~ Metal was found, plus the state of the Metal, idiotic.

! The metal mass measures

it is very dense, and heavy- very ragged, it is in layers, having apparently gone through intense heat and very heavy impact. I have been used to hard work, and have been exercising for the past 35 years, so I know that it was not easy to break off the
