

really having to believe it because Moore is essentially not as credible a source as say, the President of the United States. After a few months of digestion and discussion a more credible source could emerge with a statement that yes in fact the interview was essentially fact. This scenario would cushion somewhat the blow to the public. If however, Moore does not release the tape by say, February 1, 1988 but comes instead with a story similar to: 'MJ-12 has informed me that they are definitely planning a release of all information by October 1988. I have seen the plan and have seen the plan and have seen the guarantee that this will happen. So I have decided to withhold the release of my video tape at this time as it may cause some problems with MJ-12's plans'. This would in effect buy more time for MJ-12 and time is what they desperately need.

Now you ask, "Why haven't I heard about any of this?" Who do you think you would hear it from? Dan Rather? Tom Brokaw? Sam Donaldson? Wrong. These people just read the news. They don't find it. They have ladies that call and interview witnesses and verify statements on stories coming over the wire either AP or UPI. Its not like Dan Rather would go down to Wytheville, Virginia and dig into why there were 4000 reports of sightings in October and November of 1987. Better that Tom Brokaw or someone else should risk their credibility on this type of story. Tom Brokaw? Tom wants Sam Donaldson to risk his credibility. No one...but no one is going to risk their reputation on such outlandish ideas regardless of how many people report sightings of 900 foot objects running them off the road. In the case of the Wytheville, Va. sightings dozens of vans with NASA lettered on the side failed to interest newsmen. And those that asked questions were informed that NASA was doing a weather survey.

Well then you ask what about our scientists...what about Carl Sagan? Isaac Asimov? Arthur C. Clarke? Wouldn't they have known? If Carl Sagan knows, then he is committing a great fraud through the solicitation of memberships in the Planetary Society, 'to search for extraterrestrial intelligence'.

Another charade into which the U.S. Government dumps millions of dollars every year is the radiotelescope in Arecibo, Puerto Rico operated by Cornell University with, guess who, Carl Sagan. Cornell University is ostensibly searching for signals from outer space, a sign maybe, that somebody is out there. Its hard to believe that relatively intelligent astronomers like Sagan could be so stupid.

What about Isaac Asimov, surely the most prolific science fiction writer of all time would have guessed by now that there must be an enormous cover-up. Maybe, but if he knows he's not saying. Maybe he's afraid that Foundation and Empire will turn out to be inaccurate.

What about Arthur C. Clarke? Surely the most technically accurate of science fiction writers with very close ties to NASA would have at least a hint of whats really going on. If so, he's not talking. In a recent science fiction survey, Clarke estimated that contact with extraterrestrial intelligent life would not occur before the 21st century.

If the government won't tell us the truth and the major networks won't give it serious consideration what is the big picture anyway? Are the EBE's having
