

atom dipole
paths of component
parts.

Earth's path in space

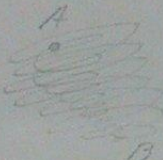

in all directions
in relation about its own axis, plus forward
move and a spin spin

The final structure of the atom is the (Gods) will
to manifest in matter it is pure thought. See ESP at
Duke University

one age = distance

from A to B tip to
bottom of vortex this
is mans earth advancement

Duke University

Note

E. is never in the same
position during a cycle
of mans advancement
no Aquarian age yet

SPRINE controlled by
location of other spheres
in space acting fore and
aft. + and - = two
in one and I with two.

↑ Equatorial displacement
due to spiral movement of
earth on its path

from nature worship to
the One God worship and
a knowledge of the father and life ever lasting
then decline to nature worship again

when each arm of a
+ is rotated in opposite
directions to obtain
balance it will give
1 in 2 and 2 in one
on each 1/2 Rev.

← West

Earth

mans advancement is always
Westward The civilizations
are always close to the equator in that point of
advancement. Ex. the point of
quartz light from the record of light due to day
from them.

SP

rotation

During the time process one can see that the rotation increases
at the point B of vortex = to this is mans advance ment. speed up
freq increases with spin. The controlling factor is this Gods Being is put upon
the world with more living force at B because common vortex principle. known
in the science of centrifug.
