THE EXTRATERRESTRIALS ("From Other Worlds")
CANADA.

Three years ago a farmer found in the St. Laurence River, near the Quebec bridge, a mass of metal which seemed suspicious to him. For several days, at low tide, this "object" had attracted his attention, because it seemed abnormal to him that at this place, non-navigable, anyone had been allowed to place such a piece of metal.

He immediately telephoned the Army and a few days later this object was retrieved, but with great difficulty since it weighed eight tons, even though its length was only five feet, its length (sic) three feet and its thickness 10 inches. Certain specialists were inclined, if one dare say it, to make an analysis on this mass of unknown origin, but without success.

Six months later it was turned over to the Marine (it had been found in the water, at least at high tide) and at the end of a year, the experts of our naval force had not yet succeeded in identifying this mass.

Being more and more puzzling, it was transported to Ottawa, to the research department, and it was Doctors B.H. Riddell and Wilbert Smith who undertook to try to discover the origin of this intriguing piece of metal.

After extended studies, in collaboration with most conscientious geologists, it had not yet been possible to penetrate the mystery. Not only had the mystery not been solved, but every attempt to pierce this chunk has also been established as fruitless until now. It was also attempted to extract a piece with the help of a mechanical drill, but in vain.

The object cannot be pierced, and in its "turtle-shell" pipe-holes were noticed, protuberances definitely created by the hand of man or of a man of some sort ... wherever he lives.

It has been established, beyond a doubt, that the materials constituting this object do not come from this planet. It has also been shown that it is not a matter of being a fragment of meteorite, since the nature of these fragments is already known.

In these circumstances, questions are being asked in scientific circles of the federal capital, where the "thing" is being carefully kept.
