

In view of the tremendous importance of the UFO matter should they in fact be vehicles of some sort from beyond our known environment, then we had better be aware of it. As much of the evidence available points in this direction, it is time the government let the public know more about it.

I hope that through you, as a scientist in the House of Commons, and obviously one who is open-minded and not afraid to express his views, some progress can be made.

If I may assist you by providing any further information or data from my very extensive library, I will be pleased to do so.

Yours sincerely,

Arthur Bray
