Ottawa 5, Ont.

Dear Art:

Thanks so much for your recent letter. I am sorry to say that I have nothing whatsoever to report on UFOs at this time. It has been extremely quiet in this area for the past year and a half. I am still trying to tie up some loose ends concerning some reports in the Kenora, Ont. area; I mentioned these in my last letter to you 4 March.

Of course, what we are left with are some highly interesting material but very little in the way of tangible proof. One wonders why it is necessary to follow up every such case when the same ultimate conclusion is evident. The answer is that we may uncover some new information but it remains that the mystery is a frustrating one.

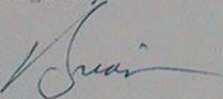

I'm sorry about the trouble you're having with the NRC and the analysis of the metal. I'm sure they are afraid that someone would try to concoct a suitable UFO story without due regard to their findings. The trouble with that attitude is that they are assuming that their analysis is without fault and totally comprehensive. It is just too bad that the entire amount of material was turned over to them without retaining at least some.

I am glad to hear that you are on another book. Hope you'll let me know when it will be appearing.

I suppose CAPRO has folded. I left some months ago because of a lack of interest and I have not been in touch with them since. I agree that it is unfortunate because I firmly believe that CAPRO was doing a good job at the beginning. But this is the way a number of groups go. They are active for a while and then when sightings are not as prevalent as they may have been when the interest was stimulated, they drift away.

I am going to do an article on the Kenora sighting in #8 of Magor's magazine and an interesting photo will be included. Hope you are getting his effort which does a good job on Canadian reporting, I think.

Regards,

BCC
