De Mr. Cameron

I was most interested in your letter of 17 Sept 87 concerning Wilbert Smith & the project magnetic documentation from the early fifties. I have taken the liberty to annotate your letter and in return a Xerox copy of such pages.

As I indicated by connection with Wilbert Smith was very casual. He had a very engaging personality and his ideas which seemingly outlandish, intrigued me at the time. In an off hand moment I suggested the idea that a controlled magnetic pole could indeed provide propulsion in the earth's magnetic field. In fact the local newspaper (Ottawa Journal) picked up the story and it was a headline item. My name appeared prominently and it took a long time to live down. Frankly I never took the matter seriously. Of course I was not aware of all the high level discussions between Ottawa and Washington on the matter.

good luck & you hank? P. Jant.
