BRIAN C. CANNON

August 12, 1969.

Dear Art:

Since I have now cut back on my activities with CAPRO, I hope to be able to correspond a little more and, most important to me, do a little more personal research into the subject of UFOs. I am maintaining my relationship with CAPRO, APRO and Canadian UFO Report, but only to the extent of assisting in investigations. The organizational work in CAPRO simply was overburdening and as a consequence, I was becoming disenchanted with the whole thing.

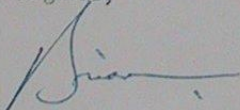

I hope that you received my letters of June 28th and 29th - particularly the latter. I have been doing my best to build up a file on the activity around Pembroke and there seems to be at least a minor flap there. Today the mail brought two statements from OPP constables dealing with two separate sightings. These reports were incomplete, in fact one did not even include the date. I am writing them both for additional information and if you are involved with this business, I'll be glad to pass along what I can get.

Were you able to stir up any additional details on the Chaput case? It is a pity that I can't get our member to return to the site but this seems impossible at the present time.

Concerning the Victoria sighting 9/29/68, Dr. Millman wrote Mr. Voorsluys stating analysis of the slides failed to shed any light on the case. He suggested the possibility of "a research test, meteorological experiment or aircraft checkout". He indicated that it would be difficult to check out all of these questions and that for the time being, the sighting has been filed as "unexplained". I must admit that our analysis did not add any additional knowledge either. As expected, a mere light source is very hard to break down.

Anything further on your presentation to the Senate committee? Hope you had the opportunity to do your stuff! The Lorenzens have a new book out - UFOs - The Whole Story. Also another book based on comments by their scientific advisors is due out in the near future.

Regards,

BCC
