

Wed Sept 10 1969

Dear Carol:

Thank you for your kind invitation for the 28th. I'll do my best to come, we have a meeting for around the 26 or 27 not sure exactly when.

Now here is something important, can I see and test by means which I have reason to believe-are only known by myself--the large chunk of metal--which was picked up near Quebec- in 1960 Mr. Smith told me about this, and also Ken Killick-at that time.

If possible, can you find an open door to let us see and test the 3,000 pound chunk ? during my visit-say any time if you can manage to spare the time..I own a special "tester " the invention of Tesla--which will without any doubt indicate if this metal was ever in outer space, regardless of the time it has been on earth-or what they have done to it, (you may show this to any one,) but you may be sure I will give a true statement, which may or may not agree with your or my ideas, the metal could be factory waste, it could be the remains of a "Sputnik "it could also be the work of lightning-I have seen this before-when a lightning bolt struck a metal deposite-.

In my test of the Ottawa chunk-I will not injure it & do not have to get nearer than ten feet- I will not however disclose the working of Tesla's Tester, it's description can be found in his old lectures--

Sincerely

Arthur

P.S. A piece of the metal will not do - no one can discover its origin if small pieces - not

that is, if it's from space - #
