OPP Receive Report Of UFO

COBOURG — A Cobourg high school teacher, saw an unidentified flying object splash into the waters of Rice Lake last night.

Robert McConkie reported to the Cobourg Detachment of the OPP that he saw an object fall into the lake just west of Black Island, near the north shore at about 9 p.m. It did not glide onto the water as a seaplane would, but splashed in.

He described the object as fairly large and "glowing like a fire". It glowed for five minutes before disappearing.

Mr. McConkie explored the area by boat immediately afterwards but found nothing. He said he spoke to a fisherman but he had been working with a catch and had not noticed any UFO.

A spokesman for the Cobourg OPP said this morning that Mr. McConkie had said he was going to explore the area and report back to the police. Since nothing had been heard of him by the police since they presumed he had been kidnapped by "little green men."

To return to a serious subject, the spokesman said that Keith Thomson of the University of Toronto warned that pieces of meteorology equipment could drop from the skies between Port Hope and Campbellville anytime within the next few days.

The equipment was mounted on one-foot square pieces of styrofoam.

Mr. Thomson says that any one finding such equipment should contact him at the Physics Building of the University of Toronto.

FRI. SEPT 12.

No further details available. Interviewed Mrs McConkie & phoned Thomson who claimed they had no equipment on loan at that time
