

For about 3 minutes at approximately 11 p.m. on the 15th of October she also observed something; but from her report it is hard to say how this differed from the first sighting. She also saw something on October 19th about 2:30 a.m. and something on October 20th about 9:15 p.m. Apparently on at least two of these nights the object was again close by as she reports that she could not see the "clearance lights" but she could see the "light from the interior."

On the 22nd of October from 7:40 to 8:15 p.m. she reports that her car was paced by this object for about 25 miles along the highway. When she slowed down, it slowed down; and when she sped up, it sped up.
