

Not having access to the inner workings of nuclear physics as related to H-bomb explosions, nor being a mathematician, I am unable to verify Cathie's work myself. However, he has presented such a strong well-researched and documented case, it is incumbent upon science to prove he is wrong, if indeed he is. I adopt the attitude that unless science can prove Cathie wrong, then he can be assumed to be correct.

I therefore request a study of "Harmonic 695" by the National Research Council with the aim of determining the validity of the author's conclusions, and his theories, and that I be informed of the results of this study. In my opinion, Bruce Cathie has conducted the most advanced research of any private individual in this field to date and science has a responsibility to either confirm or deny his work. If his work is not valid, then of course, the facts which contradict him must be stated openly.

I look forward to hearing from you.

Yours sincerely,

Arthur Bray
