

9. The Center will assemble a scientific team for rigorous study of the report to determine whether the phenomenon reported can be identified.
10. Upon completion of the analysis in 9 above the photo will be subjected to rigorous analysis by photographic experts and will be compared with the descriptions in the report to determine if there is a match between the phenomenon described and the photograph.

If the phenomenon reported has not been identified (step 9) and the photo matches the reports of the witnesses (step 10), the photo can be regarded as valid photographic evidence of a UFO.
