

vanished into the night sky. At this time he said he was aware of a peculiar odour not of gasoline or ~~any~~ any other fuel he knew. He believed that he saw these lights for about 30 seconds.

Later those in the cottage learned that two boys slashed down from the sky about 10 PM as they were fishing on the lake. They apparently were frightened by what they had seen despite the assurance of the father of one of the boys that they probably witnessed a meteorite.

I have not seen any other report of this in the newspapers although it might have been noted in one of the newspapers close to the sighting. Since the sighting I had purchased *Challenging to Science* by Jacques Janine Vallée. On page 45 of this paperback I was very interested in reading about the sighting of an object by a New Zealand woman in 1959. This object also had two green lights and it when it arose rapidly from its hovering position she was aware of a peppery odour (spice?).

Mysterious lights were sighted at various times during the month of August 1967 by a score or more persons near Maxville, Ontario. These sightings were brought to my attention by a second technologist at our laboratory.

Witnesses, including this technologist's father and cousin, observed the phenomena in an area some 5 miles NE of Maxville and within a circle of about 4 miles diameter. However, another person stated that he followed a lighted object in his car some 5 miles distance from the other sightings. He reported that the object flashed red and white lights. All sightings
