

Want to file records at random...
find them in seconds?

Come to Kodak.

Many Blue Cross® and Blue Shield® organizations did just that. Came to Kodak for a better way to keep track of case histories, claims, correspondence, etc. Kodak's answer? The RECORDAK MIRACODE System.

This automated photographic memory provides for random filing on microfilm of all documents as they come in. Look-up is push-button easy. Press a few keys . . . the MIRACODE unit searches through thousands of images . . . identifies the one you are after . . . displays it on the film reader screen—all in seconds! It

will even give you a paper print, on push-button command, in a few more seconds. What is more, because on microfilm nothing really is removed from the "file," there's nothing to refile, nothing to lose or misplace!

For full details, contact: Eastman Kodak Company, Business Systems Markets Division, Department PP-4, Rochester, N.Y. 14650.
