

# Arthur Bray Phone NOTES 1

- how long's it been etc etc.
- worked 18½ years for "these people" (assume DRB)
- I'm still under the 28 year rule
- "I'll tell you flat out Gent. I analysed a piece <sup>that was 'pulled off'</sup> of that New Mexico thing. I know that thing was analysed. <sup>super light material.</sup>
- he was quite amazed to read of Sarbacher's reference to insect like ... that is absolutely the first time I have heard that... I've heard humanoid, but that is the first time I've heard them referred to as insect like
- He's 55, Buck is 71 although he doesn't
- (phone clicks twice over one minute period) He becomes very upset. Without referring to the click he says "This is what I mean... I don't think there's a secure phone line in this whole province. The phone clicks again. I don't know if this is on my end or yours. Or it on yours?"

Response - I don't think so.

AWL Could you please check?

Response (after checking extension) It's definitely not on my end

AWL I don't think there's a phone line in the world that's secure. Either that or these nosey small town operators sticking their noses where it doesn't belong.

"Buck stopped by here for two days. Had your letter. We had a discussion"

On reference to his interest in UFOs, then and now he continuously used two expressions "red-circled" and "weather-eyed" He assumed I knew what he was talking about. I didn't and didn't ask.

He also assumed I knew a lot about him. I know next to nothing. Why he couldn't be specific - why

He preferred to keep out of the public end of Smith's research "It ruined my career... I think it probably ruined WBS's as well."

- reference to Smith's son

Jim - "into the arts. I'm afraid I'm responsible for that"

Dyck - "more into technical things. worked as a maintenance supervisor for a hospital somewhere in the Hull / Gatineau region"

Buck and I worked on these anti-gravitational experiments with WBS... now that equipment I built... we had quite an active group in Ottawa... when I left I felt I should leave it with the active group... From time to time when I'm going thro' my tool box I find odds and ends coils and stuff.

Referred to group as a "clll." know we were being watched. I know a couple people showed up who weren't what they claimed they were... That's fair ball tho'. I don't mind that

- worked from 52-69.

I also analysed a piece from that Washington thing. You know all that. Again assumes I know much more than I do.

"Not many people know about what we were doing... it leaked a couple times to the press. wasn't officially sanctioned."
