

Carol

17 Nov 64

Towards the spring of 61 arrangements had been made by myself and Ken Kallick to retrieve the large metal object from the CARDE garbage dump where they had discarded it after concluding it was a piece of foundry slag and scrap melt. I borrowed a trailer and brought the object to Ottawa. The weight had been underestimated as the object was in excess of 3000 lbs. I had trouble transporting it and we were some time unloading it.

The photos were taken in the Echo Drive warehouse after we unloaded the object.

I think if this story is written the names should be deleted, In fact I am still of the opinion we should not publish it. To infer knowledge we cannot rationally support is not defensible. I have not the time or inclination to become involved in the resultant correspondence.
