

cases in which, however, nothing has been left for study except the detailed reports of the witnesses.

The research work is concerned in part with laboratory analyses of plants, trees and soil that have been affected by the presence of the UFO; medical study of witnesses who have been reported as temporarily blinded, paralyzed and subject to nausea, headaches, etc.; witness credibility; statistical studies and theoretical investigations into the dynamic behavior of UFOs.

The problems studied are, thus, not the UFO itself, but the intriguing problems and experiments suggested by the consensus of UFO reports. A visitor to laboratories associated with the CENTER might find it hard to discover that the problems being studied and the experiments being performed had any direct connections with UFOs.

In brief, the research would concern itself with, for example,

1. Laboratory analysis of residues associated with a UFO Close Encounter
2. Medical examinations of persons and animals affected.
3. Theoretical studies of the dynamic and luminescent properties of UFOs.
4. Credibility of witnesses.
5. Photographic and spectrographic analysis

Public Participation in the Work of the CENTER

Persons or organizations interested in furthering serious scientific work on the UFO problem can participate best by volunteering their technical facilities, or by making tax-deductible contributions to the Center for UFO Studies, P.O. Box 11, Northfield, Illinois 60093

Mr. Perry - Thanks for your contribution check, and
offer of help.

R. Samson
Exec. Secy.
