

40 Beadon Crescent.

Agin court 755

May 25/71. Ont.

Dear Art.,

Sorry for the delay on the identification of the metal sample you had left with me some time ago. Unfortunately the Director of the Geology Dept. recently passed away causing the late report.

Enclosed, the bearer of sad news without any further comment from me.

May I suggest that a further examination be made by one skilled in such material, perhaps it would be possible to determine the age & composition with the ultimate goal in mind of source or origin of such slag. If this meets with your approval, one of the class associates will direct it to the Steel Co of Canada, Hamilton.

Had a busy week end taking soil samples of burn rings at Meath, Allumetts Lake. & New Market. plus expecting a further soil analysis on the burn rings from near Wooler Ont. May about that later when the reports are compiled.

Regards to all.

Hank.
