March 7/71

Dear Arthur,

Just a few lines to fill you in on the latest action from this end of the field. First off I thought your suggestion on bringing in Earl J Neff was an excellent one, according to the literature he can put on an exciting show. To my regret the course co-ordinator didn't have the same point of view, I will keep him in mind for any future opportunity.

The wife and I were invited out for dinner on Feb. 25 at the home of Dr. Owen (see Flying Saucer Review July/Aug./70. page 19) he had as his guest of honour Dr. Allen Hynek. His attention was much in demand for most of the evening but I did have an opportunity, when most of the other guests (celebrity types) had departed, late in the evening, to discuss U.F.O.s and the Canadian interests. He was greatly interested with the landing rings on the farm of Mr. Chaput, Allumette Isld., P.Q. I will be mailing him copies of what data I have. Your brief on the Science Policy was also brought to his attention but regret there wasn't time to go into detail.

During my last visit to U. of T. space institute a copy of your brief was left with Dr. Rod Tennyson, co-ordinator (there now defunct ? U. F.O. study group). He was pleased and surprised when I left him a gift copy, apparently he wasn't aware of your submission, his interested surprise appeared genuine but I have been fooled before.

To-morrow night, Mon. 8th March I will be going once again to see and discuss with Rod Tennyson

certain cases in his files. I hope he hasn't sifted out the valuable information. I will be looking primarily for close encounters and landing sites. See F.S.R. special issue no. 2 Beyond Condon, page 68.

Robert Stanbury MP will be in town this coming Wed. night Mar. 10, if the chance arises I will enquire regarding the conclusions of Project Magnet and the delay on the report from Dr. Smith Geological Survey, Dept. Energy, Mines & Resources. Would it be possible to have a sample sent to Royal Ont. Museum for analysis, on the QT of course? Chief Mineralogist V.B. Meen, Royal Ontario Museum, 100 Queen's Park, Tor. 5.

The school course is going well, what I lack in training as a class instructor the students more than compensate with their enthusiasm. When the weather turns much milder I hope to get them out on a field study, if a sighting occurs in time.

That wraps it up for now, will keep in touch, again my thank you for your suggestion,

Regards,

Frank
