

April 25, 1968

seen in Canada, we are very happy to have the considered opinion of private groups who wish to study given incidents in an objective and scientific manner. There are certainly many things around us that science has not yet fully explained. What surprises me is not that we have unexplained events, but that we have already been able to explain such a large percentage of phenomena that are observed.

We have a standard fireball reporting form and instructions for its use, and if you are interested we will be happy to send some to you.

Very sincerely yours,

Peter M. Millman
