

When did you first become interested in flying saucers?

In 1950 when there was quite a flurry of press stories of strange objects being seen in the skys. At first I was quite skeptical, but after interviewing a good many people who had seen something I came to the conclusion that the matter was worth some serious investigation.

What lines did your investigation take?

There were three main phases. First, the collection of as much data as possible on sightings of these strange objects, and a review of all available literature, which consisted mostly of sighting reports. Second, a careful scrutiny of the basic concepts of our science to see if there was something we had missed which might be expanded to provide at least a partial explanation. Third, following up the many and varied leads which developed as we went along.

What conclusions did you reach?

I don't know what conclusions other people might have reached from the same data, but my own opinion is that hundreds of perfectly sane normal people have seen things which they couldn't identify and which behaved as normal objects appearing under similar circumstances most certainly would not have behaved, and that these people reported to the best of their ability precisely what they saw. I am sure the testimony of these same people would gladly have been accepted in a court of law as witnesses to, say, an automobile accident. From this evidence normal statistical analysis indicated that there was a 91 percent probability that the objects were real and a sixty percent that they were extraterrestrial.

Do you think that these objects come from other planets?

I do now. At first all I was reasonably sure of was that they were not natural phenomenae and that we didn't make them.

Why do you think they come from other planets?

Through the third phase of our investigations we followed up quite a few reports of contacts having been made between the beings who navigated these unknown objects and people of earth. We used standard evaluation methods of cross questioning and indexing the answers, and from this we found that among some of the alleged contacts there was practically no correlation while among others there was almost perfect correlation. So we had established that at least we got the same story through several channels. So our next step was to try and get as much information as we could, and naturally with my own background the emphasis was placed on science.

Were you able to get any scientific information which you could confirm?

Yes. We got quite a bit and all which we could understand we were able to confirm by experiment. However, it appeared quite early in the game that the science of these beings was quite alien to ours and that to master it was going to be no easy job. In fact we are still hard at it.

Could you tell us something about this science.

Not much yet I am afraid, because it is still very patchy. It is like assembling a jigsaw puzzle with only a few pieces available at a time.

How does this relate to our science?

It extends and greatly simplifies it. At least those are the indications at present. We have quite a bit of information which could be useful to us but because it doesn't fit with our orthodox approach it is hard to stimulate any interest in it.

Have you communicated yourself with these beings from other planets?

I believe I have, indirectly, although I have not knowingly met any of them face to face. I have talked to people who claim to have met them face to face, and I am inclined to believe them because of confirmatory circumstances.

How is this communication carried on?

This is something that I couldn't possibly undertake to explain in the time available; partly because I don't understand it too well; partly because it would have to be preceded by a lengthy explanation of certain physical principles and partly because I believe it to be somewhat irrelevant. A knowledge of the operation of a teletype is not necessary to an appreciation of the messages typed out on it.

Have you ever seen a flying saucer yourself?

Yes. I have seen several, and I know perfectly well that they were not weather balloons, clouds or hallucinations.

Would you care to describe one of these sightings?

1961 ?

Q. Do you believe that flying saucers are real?

A. Yes. I am convinced that they are just as real and tangible as most things we deal with in our every day lives.

Q. Why do you think they are real?

A. Because thousands of people have seen them, many under circumstances which virtually preclude misinterpretation, and many of these sightings have been coordinated with radar fixes. Photographs have been taken and physical evidence has been accumulated.

Q. Have you ever seen a flying saucer yourself?

A.. I have seen several objects which I concluded were flying saucers simply because they couldn't be anything else.

Q. Would you please describe such a sighting?

A. Last year, I think it was August 16, right after the launching of Echo I, my wife and I and a couple of friends were outside sky-gazing to see the passage of Echo which was due about 10 minutes to nine. At about a quarter to nine a bright object came from the south at an apparent speed about twice the expected speed of Echo, and travelled almost due north. As it approached, and when viewed through the binoculars it appeared to be a steady brilliant white light with a flashing electric blue light superimposed on it. At first the rate of flashing was not apparent as it was above flicker frequency, but as it approached the frequency of flicker slowed down until it was about 1 per second as it passed overhead. As it proceeded northward it suddenly made a sharp rightangle turn and headed due west and disappeared into the western sky, with the blue light still flashing. There was no noise and the apparent speed was about the same as a jet flying at 10,000 feet. About five or so minutes later Echo I sailed majestically into view from the south west at much less than half the apparent speed of the previous object.

Q. Were you able to see any shape of the object?

A. No. Just a bright white light, with the intense blue light with it.

Q. You said earlier that there was physical evidence and that pictures existed supporting the reality of flying saucers. Would you please explain.

A. There have been over a hundred books and very many magazines published in the last ten or twelve years, the majority of which are predominantly accounts of sightings, pictures, and descriptions of the physical evidence which has accumulated. In the limited time available I could not possibly cover more than one or two such cases. However, here are a couple of interesting ones. (Two book quotes)

Q. Have you, yourself actually handled any material believed to be from

a Flying Saucer?

- A. If by that you mean material substance showing evidence of fabrication through intelligent effort and not originating on this planet, I have. But I cannot say from my own knowledge that it was ever part of a flying saucer. Unfortunately, most of my contacts in this direction were through channels, which for some peculiar reason which I could never fathom, insisted in "Classifying" these matters, and I am not at liberty to discuss them further.
- Q. What about pictures?
- A. I am naturally very skeptical about pictures since they are so very easy to fake, so unless I have taken the picture myself and participated in its developing, I would not like to offer any of them as authentic. I have taken a few myself, but I'm afraid that they are not very impressive. There are however, many pictures available, which, whether they are fakes or not, do check quite well with the many visual descriptions. Here are a few. (Show a few pictures)
- Q. How long have you been studying flying saucers?
- A. I suppose I have always known that there were other intelligent beings in the universe than ourselves and that sooner or later they would visit us. In 1947 when the first wide spread publicity on flying saucers came about, I thought this was something worth thinking about and maybe investigating. However I didn't get around to active participation until 1950, when I was attending a rather slow-moving broadcasting conference in Washington, D.C. and having some time on my hands, circulated around asking a few questions about flying saucers, which stirred up a hornets nest. I found that the U.S. Government had a highly classified project set up to study them, so I reasoned that with so much smoke maybe I should look for the fire. So I set about gathering as much sighting data as I could get hold of and analyzing it, from which I concluded that there was a 91% probability that the saucers were real and a 60% probability that they were alien craft of some kind.
- Q. What is the "official" view of flying saucers?
- A. I don't know if there even is one, in Canada. In the United States there have been so many contradictory statements made that I doubt if anyone could sort them out. However, I don't think it really matters much anyway because the saucers are here and our opinions regarding them are not going to change matters. It has been my experience that no one who takes even a little time to study the evidence available publically remains a skeptic very long. This is quite apart from those, who have had access to and studied the larger files of evidence collected by private and semi-official organizations.
- Q. How widespread is the interest in flying saucers?
- A. I don't really know, but I think that most people are prepared to take them in their stride, along with atomic energy and earth circling satellites. I have encountered very few real dyed in the wool skeptics. Judging from the large number of flying saucer clubs, one or two in each city, and the number of publications available I would say that the interest was considerable.

- Q. Since you say you have been active in the study of flying saucers for over ten years, what have you found out about them?
- A. That is a tall order and would take a good many hours. Most of it is available in reliable books handled by most book stores anyway, so I propose to cover only the highlights here. There is much evidence that the people who build and fly the saucers are people very much like us. They have been seen on many occasions and there are many claims of personal contact having been established with them. Communications with these people tell us that they are our distant relatives; that we are descendents of their colonists on this planet, and that they still regard us as brothers even though we don't often act like it. There is much evidence that the technology of these people is quite a bit ahead of ours, and through study of the behavior of the saucers and from the alleged communications we have been able to piece together some of this technology, and it is amazing to say the least. We are informed that these people are really civilized, in that they regard all men as brothers; that they do not have wars, and live under conditions of personal freedom of which we cannot conceive.
- Q. Have you any indication of why the saucers are here at this time?
- A. There is much evidence in history, legend and the Bible, that flying saucers have visited this planet on many occasions in the past and that the present visitation is nothing new; it is simply a bit more intense than in the past and we have better news dissemination means now. I think that these people from elsewhere are concerned about our playing with atomic energy, and about our plans for space travel and interplanetary exploration and conquest. I am sure that they don't hold us in very high esteem, and are worried about what we might do if we ever got loose in space armed to the teeth with nuclear weapons.
- Q. Have you any ideas about how the flying saucers operate?
- A. As I said before, the technology of these people from elsewhere is quite a bit ahead of ours, and they have an understanding of the realities of this universe that we are just approaching. We have started at the effects and speculated towards the causes, whereas they started at the cause and worked towards the effects, with the result that they are not nearly so self-limited in science as we are.
- Our observations indicate that the saucers can hover indefinitely in one place, or they can dart off with very high accelerations. Also, they can change direction quickly; all this with apparent utter disregard of the laws of inertia as we understand them. From this we conclude that they must understand these laws better than we do and have found ways of getting around the situation. Our own work along these lines, aided by tips from outside, indicates that the trick is through gravity control wherein the earth's gravity field is bent to accomodate the action required.
- Q. That sounds quite technical, but could you explain it further.
- A. I'm afraid not, and I am sure that you will appreciate the reasons which should be fairly obvious.
- Q. I know that this may be a hot question, but how do you think flying saucers affect religion?

A. So far as I can determine, these people from elsewhere are a great deal more religious than we are. They believe in a Supreme Creator, the brotherhood and divinity of Man, and a Plan for the evolvement of all. To these people, their religion is a matter of daily reality, not just Sunday profession, and they certainly seem to practice what we preach. I can find no contradictions with any of the religions of this planet.

Q. Have you any idea where these people come from?

A. I am informed through the many alleged contacts, that these people come from everywhere; that there is no place in the universe where man can live that he does not live.

Q. How about travelling about in the universe? Doesn't it take a terribly long time?

A. I'm afraid our ideas about certain things are due for a severe revision in the not too distant future. I am informed that time is not at all what we think it is, but is in fact quite variable. Also, that the velocity of light is not at all a limiting velocity, it merely appears so to us because we can't see any faster. I understand that these people from elsewhere can and do travel about a great deal and I'm sure they don't take years and years to do it.

Q. You have implied that communications can be and are carried on between these space people and people of this planet. Could you say how this is done.

A. Some of the communications have been on a face to face basis but I have not been so honored myself. Some of the communications have been by ordinary radio, and I have received a few messages by this means. But by far the majority of the communications are by what we call Tensor Beam transmission, which uses a type of radio with which we are only vaguely familiar and which I couldn't possibly attempt to describe now. However, the mental images of the person wishing to transmit are picked up electrically amplified and modulated onto a tensor beam which is directed to the person to whom the transmission is addressed, and within whose brain the mental images are recreated. The transmissions are therefore very precise, and independent of language. I have had some experience with these transmissions myself and can say that they are like nothing within the conventional experiences of earth people.

Q. You seem to have a great deal of inside information about these things; what are you doing about it, are you bringing it to the attention of scientists?

A. I have made no secret of the information with which I am entrusted and I will gladly pass it on to anyone who is sincerely interested and wants to learn. But I feel that I have no obligation whatsoever to force this knowledge on anyone or to interfere in their chosen pattern of thinking. I know these things to be true, and all the opinions to the contrary aren't going to change things, and when the time is right they will be accepted. In the meantime, I am NOT a missionary. I am concentrating my efforts on increasing my own understanding and the understanding of those who work with me in this area.
