

learn from his experiences. No one has the right to interfere in the affairs of others. In fact, our Ten Commandments are directives against interference. If we disregard this law we must suffer the consequences, and a little thought will show that the present deplorable world state is directly attributable to violation of this principle . . .

"I am told that one of our difficulties is that we do not recognize a sufficient number of dimensions and make use of them in our science. Furthermore, we do not recognize the true nature of dimensions or their place in the universe. I am told that so far as we are concerned there are twelve dimensions, and these provide the necessary and sufficient structure for the entire universe. Our concepts of dimensions are most inadequate and restrictive and so long as we persist in them we can never transcend the world of mechanical processes which we have conjured up . . .

"These people tell us of a magnificent Cosmic Plan, elsewhere, and our present human race are blood brothers of these people. It is any wonder they are interested in us? To orthodox thinkers this may seem strange, but not nearly so strange as our ideas on evolution!

"The question might be asked, 'If these people really are our brothers and are interested in our welfare, why do they remain so aloof?' We have been given the answer. There is a basic law of the universe

which grants each and every individual independence and freedom of choice, so that he may experience and of which we are a part, which transcends the lifetime of a single person or a nation, or a civilization, or even a planet or solar system. We are not merely told there is something beyond our immediate experience; we are told what it is, why it is, and our relation thereto. Many of our most vexing problems are solved with a few words; at least we are told of the solutions if we have the understanding and fortitude to apply them. We are told of the inadequacies of our science and we have been given the basic grounding for a new science which is at once simpler and yet more embracing than the mathematical monstrosity which we have conjured up . . .

"If the only evidence we had was philosophical, we might justifiably suspect it, but when coupled with the reality of observations, thousands of them, we cannot dismiss it so easily. This is especially true when we consider that the science which has been passed to us from these people from elsewhere explains in a manner which we have been quite unable to do why the saucers behave as they do, and how it is that they can do things which to us are virtually impossible. The science and the performance check perfectly!

"Again, we have been told where our scientific ideas are wrong, or inadequate, and experiments have been suggested and carried out, and in every case the alien science has been vindicated."
