MARK PROBERT SEANCES -- CONTROL LAO-TSE:

During the week of February 25, 1951, a short private meeting was held for the accomodation of several visitors, in the course of which the Control LaoTse made the observations summarized below:

Advice to Dr. Kappa: 'Dr. Kappa's aura has been seriously affected, shattered almost, by the impact of the vibrations or rays from the Ether ship which approached him. There has been a draining away of the corticle' (brain cortex?) It will take time for these vibrations to be absorbed. If he feels that he MUST continue with the record of his observations, he should by all means use a recorder and not try to write out the material by hand. His temporary blindness is a nervous effect caused by the high rates of vibration. Please pass my comments along to him. We suggest that he use mantrams to free himself. These vibrations are extremely high and tend to shatter the physical-chemical body.

' Every body, every object, has both an etheric and an astral counterpart. No, these may not resemble each other at all, except to the eyes of one who has been trained to penetrate the nature of things and observe the hidden continuity (of such chains of existents).

(As a familiar illustration: a four-sided pyramid penetrating a plane would appear to a 'plane-dweller' first as a point, then as a square; a sphere would appear as a circle, etc. Thus, the visual appearance of an object in our three-dimensional world gives us no clue at all to its 'real' or whole nature, or appearance as observed from the astral or etheric regions. ML)

Disturbances in the solar system. About every hundred years or so there is a change in pressures, due in turn to chnages in magnetic conditions. The slow solidification of star dust results in whirlpools that form stars. As these forces work inward and create a solid body, the pressure throughout the solar system is slowly reduced. Most of this is light pressure, resulting in states of attraction and repulsion.

At present there is an expansion of the universe - the so-called red shift - and this creates two forms of action, in one of which the more solid bodies travel at great speed away from one another; while the less solid return toward the central body, or are attracted to the bodies within the orbit of the central sun. These rays of the sun are particles of a more dense nature falling into the sun. Some of this matter is extremely heavy, such as the sub-Plutonium; and the excess of this causes the sun to create and discharge longer waves or waves of electrical or radiant matter*. There is a ray which encourages life in plants and other things - a "life ray." There will be more disturbances throughout the system in the next 5 - 10 years. Some of these may cause a breaking up of magnetic pressures, thus causing earthquakes, probably within 2 years - some of these probably in Central America. Great rains will come in the central U.S. - I do not myself see the quake predicted for the Ohio River Valley.
