PHOTOGRAPH OF A FLYING SAUCER TAKEN BY GEORGE ADAMSKI 11 MILES FROM PALOMAR OBSERVATORY

The picture was taken at 9:05 A M Dec 13 by Prof Adamski as the saucer came inland from the coast from the southwest (San Diego) and headin Northeast. Adamski reported the object was 2900 feet above sea level He focused the telecoped against it as the object came toward him makes it appear as lacking landmarkings, though there is some evidence of these at the bottom of the picture, in reflections of light, caused by heavy due on the brush and vegetation. When the object came within 150 to 300 feet Adamski exposed his camera. The picture reveals ball bearing land gear and portholes. The size of the ship he estimated to be in excess of 30 feet and about 12 feet thick in the center. The knob on top seemed to be a lens of some sort.

From color movie-16mm, Taken in September 1956, showing large U.S.A JET passing under huge spacecraft hovering far out in Earth's atmosphere

2. PHOTOGRAPH OF A FLYING SAUCER CAUGHT BY GEORGE ADAMSKI AS SHE BANKED BELOW PALOMAR OBSERVATORY.

This photograph taken directly after Photograph No 1 shows the ball bearing landing gear and seems to show that the skin of the ship was of transluscent metal. The ship seemed to have three rings in move ment, the outer ring and two inner rings, and beyond a doubt was intelligently controlled.
