Astro (other)
Aurora Borealis

Temporary ATIC Form 329
(7 Jun 52)

UNCLASSIFIED

1. Action requested above has been [redacted]

2. According to astronomical authorities the phenomenon described by Captain [redacted] coincides exactly with the appearance of aurora polarias (northern lights) as seen at latitudes as far south as Bermuda.

3. The newspaper article "Northern Lights Are Seen Here", which is evaluated A-1, states that the aurora was visible in Bermuda 24 January beginning at a time close to that when Captain [redacted] first saw his phenomenon. Furthermore, the lights were seen in a line of direction from Bermuda which passes through or near the position where Captain [redacted] estimates his light mass to have been located when last seen.

4. A transcript of entries from the log of Hamilton Meteorlogical Station for the night in question has been requested.

5. It was further requested that Captain [redacted] and his crew be interviewed to determine whether the appearance of nearness of the light mass could have been illusory caused, possibly, be a combination of cloud and water reflection and the intensity of the aurora.

Observed Atmospheric Phenomena [redacted]

MCIA MCI 9 Mar 49 1.

Attn: Mr. [redacted]

UNCLASSIFIED

1. The attached correspondence will be corrdinated immediately with the Engineering Division to determine what action, if any, can be taken to determine the nature or origin of the phenomena reported.

2. It is suggested that the data available be hancarried to Dr. Hynek of the Ohio State Research Foundation. In the event that no opinion canbe obtained from that organization, the incident should be coordinated with Dr. H. P. Robertson of the Norman Bridge Laboratory of Physics, California Institute of Technology. Dr. Robertson is chairman of the Committee on Technical Intelligence of the Von Karman Advisory Group. Another possibility would be Dr. George Valley of M. I. T.

3. It is recommended that all references to filtering as expressed in paragraphs 2,1,and 4 be deleted as they would unnecessarily disclose classified Air Force operations and these data would not aid in identifying the nature of the phenomena.

MEMORANDUM

10 May 1949

SUBJECT: Aurora Borealis

TO : Commanding Officer, 373rd Recon Squadron

Records of the Hamilton Meteorological Office, Hamilton Bermuda indicate a Aurora-Borealis occurred Northwest of this station at 2000 hours local 24 January thru 0200 hours local 25 January 1949. The same records also indicate a faint Aurora-Borealis occurring Northwest of this station at 0100 hours local 26 January 1949.

[redacted] W.

UNCLASSIFIED Capt, [redacted] 40

1. Date of observation: 24 January 1949 Date of interview 13 April 1949

2. Exact time of observation:
From 2000 to 2124

3. Place of observation:
29°30'N-67°29'W

4. Position of observer:
Air, RB-29 (Aircraft Commander's Position)

5. What attracted attention to object:
Dark red glow which at first resembled moon rising, later resembled ship (surface vessel) burning.

6. Number of objects:
One (see Incl #1. Capt [redacted] does not completely agree, states red portion was much more rounded than shown in Sgt Sims's sketch and pillars of white light were very distinct).

7. Apparent size:
Main portion of red mass was 1 to 1½ miles wide.

8. Color of object:
Predominately red with white light base and shafts of white light extending upward approximately 3/4 of red mass

9. Shape:
Circular, half sphere, mushroom.

10. Altitude:
Below horizon, based on water, gave appearance of coming from water.

11. Direction from observers:
1100

12. Distance from observer:
First sighting approximately 100 miles away, approaching to within 100 to 150 ft, executed sharp right bank to keep from flying into red light mass.

13. Direction of flight of object:
Undetermined

14. Time in sight;
1 hour, 24 min.

15. Speed;
Undetermined;

16. Sound and odor:
None noticeable [redacted]

DOWNGRADED AT 3 YEAR INTERVALS
DECLASSIFIED AFTER 12 YEARS.
DOD DIR [illegible]

UNCLASSIFIED

E-20754

Incl #1

17. Trail:
None

UNCLASSIFIED

18. Luminosity:
Appeared to generate its own light, white light comparable to flourescent light, red light some less brilliant than runway flare.

19/ Projections:
None

20. Maneuvers:
Undetermined

21. Manner of dissappearance:
A/C departed. Red light still visible from Bermuda on landing.

22. Effect on clouds:
Appeared to tint clouds red.

23. Additional information concerning object:
Red light illuminated left wing of A/C and reflected into cockpit. Did not resemble any Northern Light display as seen over Alaska. From 6000 ft. Water could be seen on opposite side of phenomena, stars could be seen on opposite side of red portion of light.

24. Weather conditions and light at time of sighting:
Weather good. Clouds 2 to 4 tenths, wind 25 knots from 25o, No moon, very dark, stars visable.

Name and address of observer:
[redacted], Captain, [redacted]
373d Rcn Sq VLR Wea
APO 855 c/o PM, N.Y., N.Y.

Occupation and hobbies:
Pilot, VHB
(No particular hobbies)

Comments of Interrogator:
Observer is of above average intelligence. Character, as far as viewed at this headquarters, is excellent.

Incident 260

Name and address of observer:

Capt. [redacted], 373d Recn Sqd. VLR Wea
APO - 856 C/O PM, New York, N. Y.

Occupation and hobbies:

Captain, USAF
VHB Bomber Pilot

Comments of Interrogator relative to intelligence and character of observer(s):

Above average intelligence, character appears excellent.

NARRATIVE SUMMARY:

[redacted] S/Sgt, [redacted]

UNCLASSIFIED

1. Date of Observation: 24 January 1949
   Date of Interview: 11 April 1949

2. Exact time of observation:
   2000 to 2124

3. Place of Observation:
   Unknown

4. Position of Observer:
   Air, B-29 (Stood between Pilot and Co-Pilot)

5. What attracted attention to object:
   By a red glow on horizon

6. Number of objects:
   One

7. Apparent size:
   15 to 30 miles in circumference

8. Color of object:
   Blue-white base surrounded by dark red glow fading into light red or pink at altitude.

9. Shape:
   On approach light mass appeared to build up like cumulus cloud or smoke. As A/C approached light mass it seemed to spread in arc that resembled a mushroom. A/C approaching mass might have caused what appeared to be building-up process.

10. Altitude:
    Based on water, top 4000 to 6000 ft.

11. Direction from observer:
    1000 on sighting, 0900 during observation

12. Distance from observer:
    No closer than 10 to 15 miles of main mass.

13. Direction of flight of object:
    Unknown

14. Time in sight:
    From 2000 to 2145 hours

15. Speed:
    Unknown

16. Sound and odor:
    Unknown

DOWNGRADED AT 12 YEAR INTERVALS;

UNCLASSIFIED

[redacted]

Encl #4

17. Trail:
None

UNCLASSIFIED

18. Luminosity:
Red glow resembled a red railroad flare (fuzee) with blue-White base and pillar like beams of varying intensity going up into red mass. Red mass was transparent could see stars through it. Stars not visable through white light. Mass appeared to generate its own light, gave off enough light to illuminate water surface and clouds.

19. Projections:
None

20. Maneuvers:
None observed

21. Manner of disappearance:
A/C departed area

22. Effect on clouds:
Sillouated clouds on approach

23. Additional information concerning object:
Light appeared to be coming from water. S/Sgt Marx had just returned from 90 days TDY in Alaska and Northern Lights viewed there did not resemble this in any manor.

24. Weather conditions and light at time of sighting:
Weather good, dark, no moon, few clouds

Name and address of observer:
[redacted]
373d Rcn Sq, VIR, Wea
APO 856 c/o PM, N.Y., N.Y.

Occupation and hobbies:
Engineer, B-29
No particular hobbies

Comments of Interrogator:
Observer is of above average intelligence, calm and not easily exciteable. Character, as observed at this headquarters, is excellent.

Radar Scanner, USAF

Comments of Interrogator relative to intelligence and character of observer(s):

verage or above intelligence, character appears excellent.

NARRATIVE SUMMARY:

[redacted] [redacted]
S/Sgt, AF-32070629

UNCLASSIFIED

1. Date of Observation: 24 January 1949 Date of Interview: 12 April 1949

2. Exact time of observation:
From 2000 to 2124

3. Place of Observation:
Unknown

4. Position of observer:
Air, RB-29 (Left Scanner's position

5. What attracted attention to object:
Pilot called over interphone

6. Number of objects:
One (agrees with Incl #1)

7. Apparent size:
Undetermined

8. Color of object:
Blue-white at base, bordered in red gradually fading out.

9. Shape:
First seemed to be red-gold sunset. Resembled mushroom. Estimates circumference to be 25 miles.

10. Altitude:
Appeared to be coming out of ocean. Appeared to be based on ocean when observed from both distance and immediate vicinity.

11. Direction from observer:
1100

12. Distance from observer:
Undetermined

13. Direction of flight of object:
Appeared to be moving west (A/C was moving generally north) estimates minimum speed to be 25 knots

14. Time in sight;
Would judge about 1 hour and one half

15. Speed:
Undetermined

16. Sound and odor:
Undetermined

UNCLASSIFIED

18. Luminosity:
Comparable to blast furnaces of Pittsburg from distance of 5 miles

19. Projections:
None

20. Maneuvers:
Light appeared to decrease and increase in altitude and intensity. It had a zig-zag course.

21. Manner of disappearance:
Did not disappear

22. Effect on clouds:
Could see two sausage shaped clouds, silhouetted, either beyond or in the east portion of light mass. No other clouds observed.

23. Additional information concerning object:
Light mass was transparent. Could plainly see water on other side of light. Water in vicinity of light was plainly visible. Could have seen surface vessel, but did not. When A/C was departing light appeared to increase in diameter. Airman has observed Northern Lights from Himalayas in India and has never a display that resembled this.

24. Weather conditions and light at time of sighting:
Weather was good. Clouds scattered. Was dark, no moon.

Name and address of observer:

HEADQUARTERS

Air Materiel Command

UNCLASSIFIED

MCIAXO-3/HMS/rm

WRIGHT-PATTERSON AIR FORCE BASE
DAYTON, OHIO

MAR 24 1949

IN REPLY ADDRESS BOTH COMMUNICATION AND ENVELOPE TO COMMANDING GENERAL, AIR MATERIEL COMMAND, ATTENTION FOLLOWING OFFICE SYMBOL:

MCIAXO-3

SUBJECT: Project "Grudge"

TO: Commanding Officer
373rd Reconnaissance Sqd VLR Wea
Kindley AFB, Bermuda
APO 856, % Postmaster
New York, New York

1. Reference is made to your letter (373 D Wea 350.05) dated 9 February 1949, subject, "Semi-Monthly Intelligence Report" concerning sighting of light phenomenon by Captain Mattatall, 24 January 1949.

2. According to astronomical authorities the phenomenon described by Captain [redacted] coincides exactly with the appearance of aurora polarias (northern lights) as seen at latitudes as far south as Bermuda.

3. The Newspaper article "Northern Lights Are Seen Here" which is evaluated A-1, states that the aurora was visible in Bermuda 24 January beginning at a time close to that when Captain [redacted] first saw his phenomenon. Furthermore, the lights were seen in a line of direction from Bermuda which passes through or near the position where Captain [redacted] estimates his light mass to have been located when last seen.

4. It is requested that a transcript of entries from the log of Hamilton Meteorological Station for the night in question be forwarded to this Command, Attention: MCIAXO-3.

5. Request further that Captain [redacted] and his crew be interviewed to determine whether the appearance of nearness of the light mass could have been illusory caused, possibly, by a combination of cloud and water reflection and the intensity of the aurora.

6. Four copies of "Guide to Investigation" are forwarded to aid in recording the desired information.

SUBJECT: Semi-Monthly Intelligence Report

TO: Commanding Officer
2108th Air Weather Group
Westover Air Force Base
Westover Field, Mass

1. In compliance with 308th Reconnaissance Group (Weather) letter, subject,: "Semi-Monthly Intelligence Summary", file 308th WEA 350.05, dated 29 July 1947, the following report is submitted for the period ending 31 January 1949.

2. On 24 January 1949 crew of B-29 aircraft, number 44-87750, returning from a special search mission for BOAC Tudor IV, Star Aerial, observed the following described atmospheric phenomena:

a. At 2400Z, 24 Jan 49, from position 29° 30' N - 67° 29' W, on a true course of 050°, altitude 1,500 ft., Captain [redacted], Aircraft Commander, first saw a red glow off the left wing which at first resembled the moon rising and which the crew later believed to be a burning ship.

b. At 0025Z the pilot turned the aircraft in direction of the light, 350° true course, and within fifteen minutes the aircraft was so close to the red light object that a sharp bank was executed in order to avoid flying into the red light mass.

c. On approaching the redlight it was observed as a dark red glow, 1 to 1-1/2 miles wide, based on the water, and resembling burning oil with a phosphorescent red light rising to 2,500 to 3,000 ft altitude. Also from heading of 350° and 180° two columns of white light, 1/4 to 1/2 mile apart, resembling search light beams and extending upward through approximately 3/4 of the red light mass. The beams were at a slight angle toward each other. Capt [redacted] estimates that if the white light beams had extended above the red light mass to an altitude of 10,000 ft. they would have intersected. It was also observed that the red light mass gave off enough light to illuminate the surface of the water and the bases of surrounding clouds with a dull red glow (see inclosure #5)

d. Aircraft position above the red light mass, 6,000 ft. altitude, at 0040Z, 25 Jan 49, was 31° 24' N - 67° 08' W

e. Wind at 6,000 ft was from 025° with velocity at 25 knots.

f. Clouds were present, two to four tenths coverage, with bases at 3,300 ft and tops to 5,000 ft.

Rusic: Semi-Monthly Intelligence Report, 375d Rcn Sq (VLR) Wea, dtd 9 Feb 49
file 350.05

[redacted]

UNCLASSIFIED

g. At time of observation the moon was not visible.

h. Communications were reported good at that time.

i. Capt [redacted] reports the aircraft as staying in the area Approximately 45 minutes and completely circling and surveying the red light mass from all angles.

j. Photographer aboard special mission aircraft reported attempting to photograph the phenomena with a K-20 camera at shutter setting of 1/125 second and lens setting of 4.5. Due to fast shutter speed no results were obtained even though 15 prints were overdeveloped in an attempt to bring out detail.

k. Last observation made at 0124Z, 25 Jan 49, looking down from an altitude of 6,000 ft., true course of 045°. The red mass seemed to move away from aircraft and spread out and had reached position 31° 35' N - 67° 10' W.

l. (deleted)

m. Aurora Borealis, normally not seen in this area, was very noticeable on the evening the above described light was seen (see incls 2 and 3). However, Aircraft Commander, Capt [redacted], has just returned from 90 days TDY in Alaska and Navigator, Lt Austin, presently TDY this organization from 375th Rcn Sq (VLR) Wea, state that no Northern Lights they had ever witnessed reacted in this manner as to color, shape, position, or intensity.

3. The above described phenomena was witnessed from all parts of Bermuda as a red mushroom shaped glow with two pillars of white light rising up through, but not extending above the red light mass.

4. At 2245Z, 25 Jan 49, B-29 aircraft, number 45-21790 was dispatched.*** The crew reported that on arrival at destination the red light mass could not be located ***

EVALUATED B-2

Mid-Ocean News article "Northern Lights Are Seen.Here" dtd 25 Jan 49

Northern Lights Are Seen Here

For nearly six hours last night Bermudians were treated to the unusual sight of Northern Lights. Entries in the Hamilton Meteorological Station's log indicate that the Northern Lights -- otherwise known as the Aurora Borealis -- were visible from about 8.30 P. M. to 2 A. M. Appearing to the north-northwest, they began with a reddish hue and changed throughout the evening to a powerful white, which spread like a curtain.

The lights which are seen frequently in the far North are rarely visible this far South. When they are seen in these latitudes the weather is exceptionally fine, the Met Station said. Last night conditions here were still and fine.

John Jefferies, branch engineer for Cable and Wireless, Ltd, in Bermuda, said the service was subnormal from about 11 p. m. to 6 a. m. As expected he explained the station experienced fading on the wireless circuits.

This was the first time interference due to the aurora had been noticed in Bermuda, he said, although in some other parts of the world it is not uncommon

Mid-Ocean News article "Northern Lights Seen Here For Second Time" dated 26 Jan 1949

Northern Lights Seen Here For Second Time

Northern Lights were seen last night for the second time in succession in the sky to the north and northwest.

A red-orange glow appeared to the north-northwest shortly after 9:30, but was partially obscured by low clouds. The Hamilton "Met" station reported a faint aurora corealis at one o'clock. Radio reception was hampered by the phememenon.

Cable and Wireless (West Indies) Limited reported earth currents in their cables and complete wireless failure on wireless circuits. All cables were received, the company stated, and the wireless messages received were not for public service.

Capt G. M. Fletcher of the Gascony was as surprised as a lot of other people when he first saw the display on Monday night. "I didn't know at first what they were," he said this morning aboard his vessel.

This was the first time, Captain Fletcher said, that he had noticed these lights so far south. In northern latitudes he had often seen them. On these occasions he said they were more spectacular, with less red but more blue and violet in their makeup.

1. In reference to the phenomenon reported in subject letter, no glow of the size described has ever been reported previously to the knowledge of the scientific personnel of this Directorate at such low altitude. Due to the auroral activity in the area at the time it is natural to assume that the phenomenon is in some way related to the aurora, however the fact that this has been observed on the surface of the water rather than high in the atmosphere is

Subject: Request for Analysis

difficult to explain. The orange color seems to indicate an excited state of oxygen, however, with the small mean free path which exists at the earth's surface, a terrific electrostatic field would be required which is not likely. If such a field existed due to some freak condition, static charges should have been noted by the B-29 personnel when approaching the glow. This would have produced corona from propeller tips and wing tips which should have interfered with radio communication.

2. At the present time no nuclear reaction is known to the personnel of this Directorate which would produce ionizing particles of suffient energy to excite the oxygen line in such a manner. The highest decay energy known is that resulting from nuclear fission of U^{235} and Pu^{239} which is in the neighborhood of 200 MEV. It is estimated that several thousand MEV should be required to produce this effect, and to date this has only been observed in cosmic rays which are not sufficiently dense enough nor localized enough to produce the effect. Even a controlled rate of fission would liberate heat which should have been readily detectable by the crew of the B-29 through heat radiation effects.

3. The two white "searchlight" beams seems to indicate higher excitation states of oxygen, nitrogen, and other atmospheric elements which are apparently in the zones of maximum potential gradient. It would be natural to assume that there is a possibility of the effect being man made, however again the voltage required to produce a discharge between two antenna masts of a surface craft should cause breakdown of the air rather than a glow discharge at atmospheric pressure. There is a possibility of exciting the gyro-magnetic frequency of electrons in the earth's magnetic field which should not be overlooked. By establishing a strong electromagnetic field at approximately 1.5 mega cycles, and using the earth's magnetic field in much the same manner as a cyclotron magnet, it is theoretically possible to establish electron orbits in the atmosphere which would accelerate the electrons to the point where ionization of the air (and consequently glow) would take place. This has been proposed as a means of exciting the upper atmosphere on high altitude rocket flights in order to obtain atmospheric composition by spectrographic plates. The possibility of doing this at sea level pressure has not been considered to be possible, however, due to the short mean free path of the electrons at low altitude.

4. The fact that various atmospheric gases have absorption bands in the microwave region is also well known, but no known cases have been reported of exciting such molecules to the point of ionization at sea level pressures. Hydrogen in water has been resonated at relatively low frequencies due to their magnetic moment, however, a magnetic field of several thousand gauss is required for resonance.

5. In conclusion, no valid explanation, either natural or man made, can be found for a logical explanation of this phenomenon. A copy of the sketch and descriptive material will be placed on file in this Directorate in the hope that some valid explanation or further observation may be found.

SUBJECT: Geomagnetic Storms

TO: Commanding General
Air Materiel Command
Wright-Patterson Air Force Base
Dayton 2, Ohio
ATTN: Major R.L.Moore MCREEO

1. Reference is made to letter your office of 29 March 1949, subject "Request for Analysis", and 1st Indorsement of this laboratory of 29 April 1949 concerning the observations of a weather reconnaissance aircraft on 24 January 1949 in the vininity of Bermuda. In accordance with this report a red light mass was sighted on the surface of the water which resembled burning oil and seemed to emit a phosphorescent red light rising to 2500 to 3000 ft in altitude.

2. Dr. E. Penndorf of this laboratory in reviewing literature recently, has noticed a short article in the February 1949 issue of "Nature" published in England which seems to tie in the unusual phenomenon with giant sunspot activity and geomagnetic storms which occurred on the same day. An extract from "Nature" is attached for your information. The article, of course, does not mention the glow observed by the bomber crew, but it now seems obvious that the effect must have been caused indirectly by a stream of "solar particles" ejected from an intense flare from a spot on the sun's surface. The mechanism of actual production of the red glow with white beams is still unknown and of great interest, and similar reports of this nature of similar occurrences in the future would be appreciated.

UNCLASSIFIED

Extract from "NATURE"

5 February 1949

GIANT SUNSPOT AND GEOMAGNETIC STORM

A very large group of sunspots of 'bipolar' type crossed the solar disk during January 16–20. At central meridian passage on January 22.7 U.T., the middle of the group passed 28° above the centre of the disk. Two big spots were the chief components, with their centres separated 12° in longitude, or approximately 85,000 miles. The aggregate area of the spots for several days was about 2,300 millionths of the sun's hemisphere, or about 55 times the cross-section area of the earth. Greenwich data show that sunspots of this order of size are very likely to be associated with geomagnetic storms beginning within the time-limits of two days before and four days after central meridian passage of the spot group. A severe geomagnetic storm did, in fact, occur, commencing abruptly on January 24 at 18h. 28m. U.T. The disturbance continued with even increased vigour to the night of January 25–26. Displays of the aurora were widely seen on both nights in Great Britain. Provisional overall ranges recorded at Abinger of the earth's magnetic elements (kindly communicated by the Astronomer Royal) are as follows: D, 1° 2′; H, 660γ; V, 490γ. Long-distance radio-communication was seriously affected during the period of the geomagnetic storm.

Although a close connexion between the magnetic storm and the solar region containing this giant spot group can scarcely be doubted, there is little evidence at present for the occurrence of a brilliant solar flare some 24 hours before storm onset. Such a flare may have occurred, however, during the Greenwich night hours, and observations are being sought from observatories recording during 18h. –0h. –6h. U.T. either (a) direct solar observations; (b) radio anomalies that occur in the earth's day hemisphere when flares occur; or (c) a characteristic 'crochet' impulse on magnetograms that likewise betrays the occurrence of the more intense flares. Apart

UNCLASSIFIED

from this, there is [illegible] evidence that the stream of solar particles involved in the occurrence of a great magnetic storm is ejected at the same time of an intense flare within the central region of the sun's disk.

1. As requested in par 5, basic correspondence, Captain [redacted] and crew have been interviewed (see Incls 2, 3, 4, 5, & 6). Navigator, 1st Lt [redacted] was TDY to this headquarters from 375th Rcn Sq, Eielson AFB, Alaska and has since returned to that organization. Radio Operator, Sgt [redacted], was busy at radio pannel and viewed light but briefly. Extra Scanner, Sgt [redacted], was operating engineer's pannel and did not view light. Right Scanner, Sgt [redacted] is at present 30 days TDY to 2108th Air Weather Group, Westover AFB, Mass.

2. All Officers and Airmen interviewed viewed phenomenon through plexiglass aircraft windows or blisters. No artificial aids to vision were used.

3. Approximately 5 to 15 miles from the light mass Capt [redacted] and Lt [redacted] reported seeing the lights of a surface vessel. Radio operator, Sgt Barker was requested to contact it, however, contact could not be made.

4. Radio contact was good all during the flight and contact was maintained with Bermuda. However the radio operator does not remember if there was an undue amount of radio interferance.

5. Radar Operator, Sgt [redacted] operating radar set AN/APQ-13 had been receiving good results. Several surface vessels were picked-up in areas other than that where the phenomenon occured. He was unable to pick-up surface vessel which was sighted in the vicinity, even-though all ranges were tried. There was no indication on the scope in the vicinity of the phenomenon. Sgt [redacted] could not get an indication on the radar scope until about 90 miles from Bermuda, at which time the island was picked-up.

6. All crew members who observed this phenomenon stated that it was not illusory and did not seem to be a reflection. It seems hardly feasible that it was an illusory condition caused by the Northern Lights as there was no visible display of them at that time. "Northern Lights" as refered to in cited news article was the Light Mass here-in described.

7. Log of the meteorological station at Hamilton, Bermuda could not be obtained without causing undue comment. It was, however, viewed by Major Savage, Station Weather Officer (see Incl #7). Log of the weather station, Kindley AFB, Bermuda has been substituted (Incl #9).

SUBJECT: Project "Grudge"

TO: Commanding Officer
373rd Reconnaissance Sqd VLR Wea
Kindley AFB, Bermuda
APO 856, % Postmaster
New York, New York

1. Reference is made to your letter (373 D Wea 350.05) dated 9 February 1949, subject, "Semi-Monthly Intelligence Report" concerning sighting of light phenomenon by Captain Mattatall, 24 January 1949.

2. According to astronomical authorities the phenomenon described by Captain [redacted] coincides exactly with the appearance of aurora polarias (northern lights) as seen at latitudes as far south as Bermuda.

3. The Newspaper article "Northern Lights Are Seen Here" which is evaluated A-1, states that the aurora was visible in Bermuda 24 January beginning at a time close to that when Captain [redacted] first saw his phenomenon. Furthermore, the lights were seen in a line of direction from Bermuda which passes through or near the position where Captain [redacted] estimates his light mass to have been located when last seen.

4. It is requested that a transcript of entries from the log of Hamilton Meteorlogical Station for the night in question be forwarded to this Command, Attention: MCIAXO-3.

5. Request further that Captain [redacted] and his crew be interviewed to determine whether the appearance of nearness of the light mass could have been illusory caused, possibly, by a combination of cloud and water reflection and the intensity of the aurora.

6. Four copies of "Guide to Investigation" are forwarded to aid in recording the desired information.

FOR THE COMMANDING GENERAL:

373D WEA 350.05

Feb 9 1949

SUBJECT: Semi-Monthly Intelligence Report

TO: Commanding Officer
2108th Air Weather Group
Westover Air Force Base
Westover Field, Mass

1. In compliance with 308th Reconnaissance Group (Weather) letter, subject,: "Semi-Monthly Intelligence Summary", file 308th WEA 350.05, dated 29 July 1947, the following report is submitted for the period ending 31 January 1949.

2. On 24 January 1949 crew of B-29 aircraft, number 44-87750, returning from a special search mission for BOAC Tudor IV, Star Aerial, observed the following described atmospheric phenomena:

a. At 2400Z, 24 Jan 49, from position 29° 30' N - 67° 29' W, on a true course of 050°, altitude 1,500 ft., Captain [redacted], Aircraft Commander, first saw a red glow off the left wing which at first resembled the moon rising and which the crew later believed to be a burning ship.

b. At 0025Z the pilot turned the aircraft in direction of the light, 350° true course, and within fifteen minutes the aircraft was so close to the red light object that a sharp bank was executed in order to avoid flying into the red light mass.

c. On approaching the redlight it was observed as a dark red glow, 1 to 1-1/2 miles wide, based on the water, and resembling burning oil with a phosphorescent red light rising to 2,500 to 3,000 ft altitude. Also from heading of 350° and 180° two columns of white light, 1/4 to 1/2 mile apart, resembling search light beams and extending upward through approximately 3/4 of the red light mass. The beams were at a slight angle toward each other. Capt [redacted] estimates that if the white light beams had extended above the red light mass to an altitude of 10,000 ft. they would have intersected. It was also observed that the red light mass gave off enough light to illuminate the surface of the water and the bases of surrounding clouds with a dull red glow (see inclosure #5)

d. Aircraft position above the red light mass, 6,000 ft. altitude, at 0040Z, 25 Jan 49, was 31° 24' N - 67° 08' W

e. Wind at 6,000 ft was from 025° with velocity at 25 knots.

f. Clouds were present, two to four tenths coverage, with bases at 3,200 ft and tops to 5,000 ft.

file 350.05

g. At time of observation the moon was not visible.

h. Communications were reported good at that time.

i. Capt [redacted] reports the aircraft as staying in the area Approximately 45 minutes and completely circling and surveying the red light mass from all angles.

j. Photographer aboard special mission aircraft reported attempting to photograph the phenomena with a K-20 camera at shutter setting of 1/125 second and lens setting of 4.5. Due to fast shutter speed no results were obtained even though 15 prints were overdeveloped in an attempt to bring out detail.

k. Last observation made at 0124Z, 25 Jan 49, looking down from an altitude of 6,000 ft., true course of 045°. The red mass seemed to move away from aircraft and spread out and had reached position 31° 35' N - 67° 10' W.

l. (deleted)

m. Aurora Borealis, normally not seen in this area, was very noticeable on the evening the above described light was seen (see incls 2 and 3). However, Aircraft Commander, Capt [redacted], has just returned from 90 days TDY in Alaska and Navigator, Lt Austin, presently TDY this organization from 375th Rcn Sq (VLR) Wea, state that no Northern Lights they had ever witnessed reacted in this manner as to color, shape, position, or intensity.

3. The above described phenomena was witnessed from all parts of Bermuda as a red mushroom shaped glow with two pillars of white light rising up through, but not extending above the red light mass.

4. At 2245Z, 25 Jan 49, B-29 aircraft, number 45-21790 was dispatched.*** The crew reported that on arrival at destination the red light mass could not be located ***

Mid-Ocean News article "Northern Lights Are Seen Here" dtd 25 Jan 49

Northern Lights Are Seen Here

For nearly six hours last night Bermudians were treated to the unusual sight of Northern Lights. Entries in the Hamilton Meteorological Station's log indicate that the Northern Lights -- otherwise known as the Aurora Borealis -- were visible from about 8.30 P. M. to 2 A. M. Appearing to the north-northwest, they began with a reddish hue and changed throughout the evening to a powerful white, which spread like a curtain.

The lights which are seen frequently in the far North are rarely visible this far South. When they are seen in these latitudes the weather is exceptionally fine, the Met Station said. Last night conditions here were still and fine.

John Jefferies, branch engineer for Cable and Wireless, Ltd, in Bermuda, said the service was subnormal from about 11 p. m. to 6 a. m. As expected he explained the station experienced fading on the wireless circuits.

This was the first time interference due to the aurora had been noticed in Bermuda, he said, although in some other parts of the world it is not uncommon

Mid-Ocean News article "Northern Lights Seen Here For Second Time" dated 26 Jan 1949

Northern Lights Seen Here For Second Time

Northern Lights were seen last night for the second time in succession in the sky to the north and northwest.

A red-orange glow appeared to the north-northwest shortly after 9:30, but was partially obscured by low clouds. The Hamilton "Met" station reported a faint aurora corealis at one o'clock. Radio reception was hampered by the phenemenon.

Cable and Wireless (West Indies) Limited reported earth currents in their cables and complete wireless failure on wireless circuits. All cables were received, the company stated, and the wireless messages received were not for public service.

Capt G. M. Fletcher of the Cascory was as surprised as a lot of other people when he first saw the display on Monday night. "I didn't know at first what they were," he said this morning aboard his vessel.

This was the first time, Captain Fletcher said, that he had noticed these lights so far south. In northern latitudes he had often seen them. On these occasions he said they were more spectacular, with less red but more blue and violet in their makeup.
