1. Date of Observation 1625 Date of Interview _____
2. Exact Time (local) _____
3. Place of Observation Dayton, Ohio
4. Position of observer Ground
5. What attracted attention to object. Mrs. Blandford
6. Number of objects Twice that of A/C
7. Apparent size 1 side dull in color other side flashed brightly in sun.
8. Color of object Appearing to be gold or bronze.
9. Shape Round and flat (Disc)
10. Altitude 25° Elevation
11. Direction from observer North
12. Distance from observer North Easterny
13. Direction of flight of object(s) 2 - 3 minutes possibly less
14. Time in sight faster than A/C
15. Speed
16. Sound and odor
17. Trail Reflected light from 1 side
18. Luminosity
19. Projections Climbing Gradually oscillating
20. Maneuvers
21. Manner of disappearance
22. Effect on Clouds
23. Additional Information Concerning Object-
24. Weather Conditions.

"Flying Disc" Incident in Dayton, Ohio
3 May 1949

Sighted by Mrs. [REDACTED] St., and Mrs. [REDACTED] Street at 16:25 hours, 3 May 1949. The sighting was reported to Hq, A.M.C. by Mr. [REDACTED] on the telephone. The two witnesses were interviewed by the undersigned (A. B. Deyarmond, Analysis Div., Intelligence Dept., Hq, A.M.C.) the following information was presented:

Mrs. [REDACTED]

Her attention was first called to the object by Mrs. [REDACTED]. It was sighted almost directly north of their position in the back yards of their homes. In elevation, it appeared to be just above some houses in the next street (estimated by undersigned 25° elev.) but the distance away could not be determined. It proceeded in an easterly direction, climbing gradually, seemed to level out for a short while, then climbed rapidly, disappearing at very high altitude in the northeasterly direction. The object was round in shape when seen in full size, but flat when seen edgewise. It was oscillating in roll ("flipping over" in words of witness) continuously. One side was dull in color but the other side flashed brightly in the sun. The speed of the object could not be estimated but appeared to be travelling "pretty fast". The size could not be estimated, it did not appear very large in the distance, but could have been a good-sized object. There was no trail of vapor or smoke of any kind. She had no idea what the object could be. This latter statement was repeated several times. The time in sight was described as two or three minutes, but when a five second count was made by the undersigned, she thought it was probably a much shorter time than "two or three" minutes.

Mrs. J. [REDACTED]

The location and direction of movement coincided exactly with the description of Mrs. [REDACTED]. She also described the "flipping motion" stating that, when first seen, it appeared to be moving rather leisurely, but picked up speed when it leveled off, then started its rapid climb. The shiny side seemed to be golden or bronze in color. She could not estimate the distance away, however, when questioned about the size she was quite certain that it was about twice the size of the aircraft that were always flying around and moved faster than an airplane. The time in sight was described as "two or three" minutes. There was no trail of vapor or smoke and no noise. There was no other object of any kind near the one observed. The object sighted was described as round in shape, but not round in all directions. It appeared to be flat, when seen edgewise, thus could hardly be seen in that attitude. Her son also saw the object and described it as being like the lid of a large tin can sailing thru the air (i.e., the way a flat round object sails when thrown and spun, turning over gradually.)
