I. DESCRIPTION OF METEOROLOGICAL PHENOMENON

A. Circumstances

1. Captain [REDACTED] AC [REDACTED] (SOURCE) and 2nd Lt. [REDACTED], AC [REDACTED] (COMPANION) had just landed from a local flight and were walking toward the 10th Squadron Operations Building. It was at this time (2020Z), 14 August 1951, that they observed the phenomenon.

B. Description

1. While on the ramp, SOURCE and companion first saw a light to the South of RHEIN MAIN AIR BASE. The light seemed to fall slowly as though suspended from a parachute, then leveled off on a Southerly course, made a turn to the West, then a turn to the East. The Southerly heading was maintained during these maneuvers.
2. The object, or light, appeared to travel extremely fast after leveling off.
3. A visible path was evident through very light clouds. Moonlight was quite bright.
4. The altitude of the light object was thought to be very high, but the brilliancy of the light made it appear to be much lower.
5. The light was round in shape, brilliantly white (not orange colored), left no trail (as a comet) and held a perfectly steady course subsequent to turns described above.
6. SOURCE and companion state that to the best of their knowledge, the light, or object, was not any known aircraft.
