25 July 1952. F-94. 50928. Pilot: 1st Lt Claine M. Jones (B-2). Radar Observer: 2nd Lt Aubrey M. Brenner (B-?).

UNCLASSIFIED

At 0820Z in the area Southeast of Talkeetna, 62°10' N 149°40' W, at 11,500 feet, a contact was made on a target which appeared larger than an F-94 at 14,000 yards. Lock-on was accomplished at this time with a target speed of 40 knots greater than that of the aircraft. Aircraft speed was increased to 350 knots in a 4200 feet per minute climb. The target was still pulling away at over 100 knots. After a climb

to 18,500 feet, the target appeared to level off and increase speed. Chase was broken off at this time. Visual sighting was not accomplished.

Weather was: estimated 14,000 feet broken; estimated 25,000 feet overcast with a visibility of 15 miles plus.

A further comment by the Commanding Officer of the Squadron to which the three (3) F-94's are assigned is that "no defects were found in the radar sets aboard any of the three (3) aircraft involved in these reports of unusual radar contacts".

A check of the records in the ADCC shows no target returns that could be connected in any way with those obtained by the APG-33.

AIR INTELLIGENCE INFORMATION REPORT

FROM (Agency)	REPORT NO.	PAGE 1 OF 3 PAGES
67[illegible]th AC&W Sq., Osceola, Wisc.	2-52	

1. DESCRIPTION OF OBJECTS:

a. ELECTRONIC SIGHTINGS: Numerous unidentified flying objects of undetermined size or shape were sighted by Ground Electronic means in the early morning of 25 July 1952, by members of the 67[illegible]th AC&W Squadron, Osceola, Wisconsin, who were then on duty. Size of the blips which constituted the sightings were normal with the exception of some sightings which appeared as an arc (reference is made to Inc #2 this report). Arcs would appear and fade on the radar scope as a complete unit not one part of the arc appearing and fading before another part. There was no indication of any organized formation noted during sightings. Speeds varied between 14,400 and 20,000 knots as computed on the radar scope set on the 200 nautical mile range. Targets either disappeared on reaching the extreme range of the equipment or, after being painted once or twice, failed to reappear. Altitude of targets could not be computed because of their speed. Targets appearing on the radar scope followed a general pattern of a clockwise cycle, running southeast then westerly, and finally north easterly. One (1) cycle would take approximately two (2) minutes and forty-five (45) seconds for completion. There was an average delay of one (1) minute between cycles. This procedure was repeated over and over again during the entire sighting period. Toward the end of the sightings it was extremely difficult topick out any one (1) cycle due to the heavy sporadic sightings in the northern half of the radar scope and the lessening of the defined sightings in the southern half of the radar scope. There was some correlation between these electronic sightings and visual sightings made by pilots of the 109th Fighter Squadron, Wold-Chamberlain Field, Minneapolis, Minnesota, who were scrambled by the 67[illegible]th AC&W Squadron in conjunction with the radar sightings. This correlation placed both types of sightings in the same area at the same time.

b. VISUAL SIGHTINGS: Numerous unidentified moving lights were visually observed in the early morning of 25 July 1952, by members of the 67[illegible]th AC&W Squadron, Osceola, Wisconsin, who were then on duty. The lights observed were very short yellowish flashes, each flash lasting approximately one (1) second with three (3) to six (6) seconds elapsing between flahes. The flashes moved very rapidly across the sky. One (1) sighting was of two (2) simultaneous flashes in parallel movement which was the only indication of any possible formation noted. Size and speed were not determined due to lack of comparison with known objects. Lights progressed from the eastern horizon to the western horizon south of the site of the 67[illegible]th AC&W Squadron, at what was judged to be twenty(20) degrees above the horizon.

2. TIME OF SIGHTINGS:

a. ELECTRONIC SIGHTINGS: Sightings occurred between 250122S and 250245S lasting one (1) hour and twenty-three (23) minutes.

b. VISUAL SIGHTINGS: All visual sightings covered by this report occurred between 250130S and 250200S lasting thirty (30) minutes.

3. MANNER OF SIGHTINGS:

a. ELECTRONIC SIGHTINGS: Sightings were made by Ground Electronic Equipment. Type of equipment--AN/CPS-6B; Operating Frequency--2965 Mcs to 2980 Mcs; PRF--300 PPS; Antenna RPM--6; MIT--Nil; Antenna Tilt--Two (2) point five (5) degrees; Antenna Slant--eight (8) degrees. All meter reading were normal and equipment was functioning properly.

b. VISUAL SIGHTINGS: All visual sightings, covered by this report, were made from the ground by naked eye.

674th AC&W Sq., Osceola, Wisc.	2-52	

4. LOCATION:

a. ELECTRONIC SIGHTINGS: Location of sighting station is 45/15N-92/38/5.4W. Targets would generally appear on the radar scope on the 130th azimuth approximately seventy (70) nautical miles out from sighting station and, remaining in the vicinity of this azimuth, would proceed at a great speed away from the sighting station until they went beyond the limit of the equipment. Almost immediately targets would appear in an unpredictable position roughly 100 nautical miles south of sighting station and proceed in a westerly direction at great speed until running beyond the limit of the equipment (reference is made to Inc #1, this report). Again, targets would immediately appear, this time north of sighting station and, following no particular pattern, would paint once or twice in an easterly direction and disappear.

b. VISUAL SIGHTINGS: All visual sightings, covered by this report, were made from the ground at 45/15N-92/38/5.4W. Lights observed traveled from east to west an unknown distance south of this position. Lights were judged to be twenty(20) degrees above the horizon.

5. IDENTIFYING INFORMATION OF OBSERVERS:

a. ELECTRONIC SIGHTINGS:

KORIHEK, WARREN J.	Captain, USAF	AFSC 1635	1½ yrs Experience
FRYE, CHESTER B.	1st Lt , USAF	AFSC 1635	1 year Experience

b. VISUAL SIGHTINGS:

NEWCOMER, GEORGE R.	A/1C , USAF		

6. WEATHER AT TIME OF SIGHTINGS:

a. ELECTRONIC SIGHTINGS: Weather at sighting station was CAVU. Weather in area of sightings was CAVU as reported by pilots. There were strong lightning flashes far to the north during this entire period. Winds aloft were unknown.

b. VISUAL SIGHTINGS: Same as above.

7. CONDITIONS ACCOUNTING FOR SIGHTINGS:

a. ELECTRONIC SIGHTINGS:- Nothing that has not been stated.

b. VISUAL SIGHTINGS: Nothing that has not been stated.

8. EXISTENCE OF EVIDENCE:

a. ELECTRONIC SIGHTINGS: Photographs of the radar scope showing size of blips and their movements. These photographs are in two (2) inclosures: Inc #1, this report, is a series of six (6) photographs, times as indicated on photographs, showing six (6) individual views of a target as it progressed across the radar scope. Each photograph is a point of Inc #1, and has appropriate annotations on the reverse side; Inc #2, this report, is a series of seven (7) photographs, times as indicated on photographs, showing seven (7) individual views of a target that is in the form of an arc as it progressed across the radar scope. Each photograph is a point of Inc #2, and has appropriate annotations on the reverse side.

CADF 4481-52

[redacted] (CLASSIFICATION)

16—55570-1 U. S. GOVERNMENT PRINTING OFFICE

25 July 1952, Osceola, Wisconsin

Targets on photos marked Inclosure "Point #2" are considered to be due to interference from another radar set operating very near the same frequency, pulse repetition rate and antenna rotation speed as the radar at Osceola. Indications are that this interfering radar is located in a South-Eastern direction from Osceola. It is considered possible that the AN/CPS-6B located at Elkhorn, Wisconsin, could have caused interference to the radar set located near Osceola.

The periodic appearance of the targets was caused by the slight difference in rotation speed of the two radar antennas - interference occurred when the two antennas were pointing towards each other.

Targets on photos marked Inclosure "Point #1" cannot be as accurately evaluated as those described above. However, since they occurred at about the same time as the others, it is considered possible that they too may have been caused by interference from the interferring radar signals.

Weather data would be useful in determining if some distant (200 plus miles) radar set could have caused the interference. The data needed are as follows:

a. Temperature vs height
b. Moisture vs height
c. Cloud conditions.

Capt R. L. James

Large amount of ground clutter indicates anomalous weather conditions which would be suitable for receiving interference signals from a distant radar set.

AIR INTELLIGENCE INFORMATION REPORT

FROM (Agency)	REPORT NO.	PAGE 1 OF 3 PAGES
67[illegible]th AC&W Sq., Osceola, Wisc.	2-52	

1. DESCRIPTION OF OBJECTS:

a. ELECTRONIC SIGHTINGS: Numerous unidentified flying objects of undetermined size or shape were sighted by Ground Electronic means in the early morning of 25 July 1952, by members of the 67[illegible]th AC&W Squadron, Osceola, Wisconsin, who were then on duty. Size of the blips which constituted the sightings were normal with the exception of some sightings which appeared as an arc (reference is made to Inc #2 this report). Arcs would appear and fade on the radar scope as a complete unit not one part of the arc appearing and fading before another part. There was no indication of any organized formation noted during sightings. Speeds varied between 14,400 and 20,000 knots as computed on the radar scope set on the 200 nautical mile range. Targets either disappeared on reaching the extreme range of the equipment or, after being painted once or twice, failed to reappear. Altitude of targets could not be computed because of their speed. Targets appearing on the radar scope followed a general pattern of a clockwise cycle, running southeast then westerly, and finally north easterly. One (1) cycle would take approximately two (2) minutes and forty-five (45) seconds for completion. There was an average delay of one (1) minute between cycles. This procedure was repeated over and over again during the entire sighting period. Toward the end of the sightings it was extremely difficult to pick out any one (1) cycle due to the heavy sporadic sightings in the northern half of the radar scope and the lessening of the defined sightings in the southern half of the radar scope. There was some correlation between these electronic sightings and visual sightings made by pilots of the 109th Fighter Squadron, Wold-Chamberlain Field, Minneapolis, Minnesota, who were scrambled by the 67[illegible]th AC&W Squadron in conjunction with the radar sightings. This correlation placed both types of sightings in the same area at the same time.

b. VISUAL SIGHTINGS: Numerous unidentified moving lights were visually observed in the early morning of 25 July 1952, by members of the 67[illegible]th AC&W Squadron, Osceola, Wisconsin, who were then on duty. The lights observed were very short yellowish flashes, each flash lasting approximately one (1) second with three (3) to six (6) seconds elapsing between flashes. The flashes moved very rapidly across the sky. One (1) sighting was of two (2) simultaneous flashes in parallel movement which was the only indication of any possible formation noted. Size and speed were not determined due to lack of comparison with known objects. Lights progressed from the eastern horizon to the western horizon south of the site of the 67[illegible]th AC&W Squadron, at what was judged to be twenty(20) degrees above the horizon.

2. TIME OF SIGHTINGS:

a. ELECTRONIC SIGHTINGS: Sightings occurred between 250122S and 250245S lasting one (1) hour and twenty-three (23) minutes.

b. VISUAL SIGHTINGS: All visual sightings covered by this report occurred between 250130S and 250200S lasting thirty (30) minutes.

3. MANNER OF SIGHTINGS:

a. ELECTRONIC SIGHTINGS: Sightings were made by Ground Electronic Equipment. Type of equipment--AN/CPS-6B; Operating Frequency--2965 Mcs to 2990 Mcs; PRF--300 PPS; Antenna RPM--6; MIT--Mil; Antenna Tilt--Two (2) point five (5) degrees; Antenna Slant--eight (8) degrees. All meter readings were normal and equipment was functioning properly.

b. VISUAL SIGHTINGS: All visual sightings, covered by this report, were made from the ground by naked eye.

AIR INTELLIGENCE INFORMATION REPORT

FROM (Agency)	REPORT NO.	PAGE 2 OF 3 PAGES
574th ACW Sq., Osceola, Miss.	2-52	

4. LOCATION:

a. ELECTRONIC SIGHTINGS: Location of sighting station is 45/15N-92/38/5.5W. Targets would generally appear on the radar scope on the 130th azimuth approximately seventy (70) nautical miles out from sighting station and, remaining in the vicinity of this azimuth, would proceed at a great speed away from the sighting station until they went beyond the limit of the equipment. Almost incredibly targets would appear in an unpredictable position roughly 100 nautical miles south of sighting station and proceed in a westerly direction at great speed until running beyond the limit of the equipment (reference is made to Inc #1, this report). Again, targets would immediately appear, this time north of sighting station and, following no particular pattern, would paint once or twice in an eastern direction and disappear.

b. VISUAL SIGHTINGS: All visual sightings, covered by this report, were made from the ground at 45/15N-92/38/5.5W. Lights observed traveled from east to west an unknown distance south of this position. Lights were judged to be twenty(20) degrees above the horizon.

5. IDENTIFYING INFORMATION OF OBSERVERS:

a. ELECTRONIC SIGHTINGS:

KORINEK, WARREN J.	Captain, USAF	AFSC 1635	1½ yrs Experience
FRYE, CHESTER R.	1st Lt , USAF	AFSC 1635	1 year Experience

b. VISUAL SIGHTINGS:

KORINEK, WARREN J.	Captain, USAF	OVERVOLD, RICHARD H.	A/2C, USAF
FRYE, CHESTER R.	1st Lt., USAF	CASPER, JOHN S.	A/2C, USAF
FULLER, JOHN D.	A/1C , USAF	RITTENBURG, RICHARD	A/2C, USAF
HENCOCK, GEORGE E.	A/1C , USAF		

6. WEATHER AT TIME OF SIGHTINGS:

a. ELECTRONIC SIGHTINGS: Weather at sighting station was CAVU. Weather in area of sightings was CAVU as reported by pilots. There were strong thunderstorms far to the north during this entire period. Winds aloft were unknown.

b. VISUAL SIGHTINGS: Same as above.

7. CONDITIONS ACCOUNTING FOR SIGHTINGS:

a. ELECTRONIC SIGHTINGS: Nothing that has not been stated.

b. VISUAL SIGHTINGS: Nothing that has not been stated.

8. EXISTENCE OF EVIDENCE:

a. ELECTRONIC SIGHTINGS: Photographs of the radar scope showing plan of blips and their movements. These photographs are in two (2) installments. Inc #1, this report, is a series of six (6) photographs, time as indicated on photographs, showing six (6) individual views of a target as it progressed across the radar scope. Each photograph is a point of Inc #1, and has appropriate annotations on the reverse side; Inc #2, this report, is a series of seven (7) photographs, times as indicated on photographs, showing seven (7) individual views of a target that is in the form of an arc as it progressed across the radar scope. Each photograph is a point of Inc #2, and has appropriate annotations on the reverse side.

b. VISUAL SIGHTINGS: Signed narrative statements of observers. Statements are in one (1) inclosure: Inc #3, this report, is five (5) signed narrative statements of observers. Each statement is a point of Inc #3, and has appropriate annotations on the reverse side.

9. INTERCEPTION OR IDENTIFICATION ACTION TAKEN:

a. ELECTRONIC SIGHTINGS: Two F-51 type aircraft were sent to sighting area by the 67th ACW Squadron controller for purpose of intercepting and/or identifying unknown targets. These aircraft were from the 109th Fighter Squadron, Wold-Chamberlain Field, Minneapolis, Minnesota.

b. VISUAL SIGHTINGS: None.

10. LOCATION OF AIR TRAFFIC:

a. ELECTRONIC SIGHTINGS: Two (2) F-51 type aircraft were in an area fifty (50) to seventy (70) nautical miles south and south southeast of 45/15N-92/38/5.4W between the altitudes of 6000 to 10000 feet during the sighting period.

b. VISUAL SIGHTINGS: Same as above.
