AIR INTELLIGENCE INFORMATION REPORT		
SUBJECT FLYOVERPT		
AREA REPORTED ON Texas	FROM (Agency) Wing Intelligence Webb AFB, Texas	
DATE OF REPORT 22 August 1952	DATE OF INFORMATION 17 August 1952	EVALUATION C-3
PREPARED BY (Officer) ALBERT B. STREETE Maj., USAF Wg Intel Off	SOURCE Captain James H. Perry, AO718060	
REFERENCES (Control number, directive, previous report, etc., as applicable) AF letter 200-5, TMX GA4444 Hq Webb AFB dtd 19 Aug 52		

SUMMARY: (Enter concise summary of report. Give significance in final one-sentence paragraph. List inclosures at lower left. Begin text of report on AF Form 112-Part II.)

This report contains information on report of unidentified flying object as reported to this section on 18 August 1952 by Captain James H. Perry AO718060. The pilot sighted object while on a routine training flight from Hensley Naval Air Station, Dallas, Texas to Webb Air Force Base, Big Spring, Texas at 1649 hours CST on 17 August 1952.

Captain Perry reported sighting to Abilene Radio at 1652 hours CST giving the approximate heading of the object at time of sighting as 275 degrees. Abilene Radio advised El Paso and Fort Worth at 1738 hours CST. The location at time of sighting, as indicated on inclosed chart, was 3235N 9913W.

AIR INTELLIGENCE INFORMATION REPORT

FROM (Agency) Wing Intelligence Webb Air Force Base, Texas	REPORT NO. IR-60-52	PAGE 2	PAGES 2
--	-----------------------------------	------------------	-------------------

In compliance with paragraph 7d Air Force Letter 200-5 dated 29 April 1952 the following information is submitted:

(1) Description of the object. The lone object was oblong in shape and appeared very bright with no color as if a very bright light were being reflected from highly polished metal. The observer estimated the overall size of the object to be slightly smaller than the AF B-25. There were no wings or rudder visible and the object seemed to move with ease traveling at a constant speed. The propulsion system could not be determined but there were no trails or exhaust and no excessive static was noticed in the radio receiver. There was no sound but since pilot was flying a T-6 the sound could not be observed. The object maintained constant flight, and climbed at an estimated rate of 2000 feet per minute at a speed in excess of 500 miles per hour and gradually disappeared as the distance interval increased.

(2) Time of sighting. The object was sighted at 1649 hours CST 17 Aug 52 and was observed for a period of three or four seconds.

(3) Manner of observation. The object was observed visually from air at a speed of 150 knots at an altitude of 8000 feet above MSL from a T-6-D. No optical equipment was used.

(4) Location of observer during sighting. The observer's position at time of sighting was $32^{\circ} 35'N$ $99^{\circ} 13'W$. The observer was flying at a speed of 150 knots on a true heading of 245° at an altitude of 8000 feet. The object was sighted approximately one and one-half miles 45° off the observer's heading to the right. It was traveling at a speed estimated well over 500 MPH at an altitude of 15000 feet above MSL on an approximate heading of 275° . The pilot first sighted the object at two o'clock.

(5) The observer is thirty five years of age and has an estimated 6000 hours flying time of which only 1290 hours are in military aircraft. He began flying as a civilian pilot in 1935 and was graduated from military pilot training in 1944. The pilot has no combat experience. Captain Perry was placed on inactive reserve status in 1946 and returned to active duty in September 1951. He is a rated pilot on flying status....behind-the-line-pilot presently assigned as Installation Squadron Commander.

(6) Weather. The weather was clear with visibility unlimited at time of sighting. The wind was 160° , 12 knots.

(7) Interception or identification action taken. The observer reported the sighting to Abilene Radio giving approximate heading, speed and other pertinent information. Abilene Radio advised El Paso and Fort Worth.

(8) Location of air traffic in general area. The pilot was flying to the right of the Civil Airway in the twilight zone. Two Navy jet aircraft had passed at about 1440 hours CST. The observer had met a civilian Lockheed Hudson and a B-25 going east over Weatherford, Texas, $32^{\circ} 45'N$ $97^{\circ} 43'W$.

NARRATIVE STATEMENT OF OBSERVER

22 August 1952

1. On 17 August 1952, while on a routine training flight from Hensley Naval Air Station, Dallas, Texas to Webb Air Force Base, Big Spring, Texas, I saw an unusual object approximately one and one-half miles 45° off my heading to the right. The time of sighting was 1649 hours CST. I was flying an Air Force F-6-D at an altitude of 8000 feet above MSL with an indicated air speed of 150 knots on a true heading of 245° . The weather was clear with visibility unlimited. The wind was 160° , 12 knots. My position at time of sighting was $32^{\circ} 35' N$ $99^{\circ} 13' W$.

2. The object was at an altitude of approximately 15000 feet above MSL on a heading of 275° and traveling at a terrific rate of speed....well over 500 MPH. The object was just below cloud base when first sighted and was climbing. It continued to climb through scuddy clouds and disappeared from sight in about three seconds, still climbing at approximately 2000 feet per minute to the west.

3. I was flying to the right of the Civil Airway in the twilight zone. Two Navy jet aircraft had passed at about 1440 hours CST. I had met a Civilian Lockheed Hudson and a B-25 going east over Weatherford, Texas, $32^{\circ} 45' N$ $97^{\circ} 43' W$.

4. When I first noticed the object it attracted my attention about two o'clock. Its movement was in a straight line with no smoke trail or streamer in its wake. No excessive static was noticed in the radio receiver. It was very attractive and seemed to move with ease traveling at a constant rate of speed. There were no wings or rudder visible.

5. The object appeared oblong in shape and of a size slightly smaller than the Air Force B-25. Exact size and shape of the object would be hard to describe definitely due to only 3 or 4 seconds of observation and the apparent distance covered in this time. The object covered approximately thirty miles in the three seconds observed.
