7. LENGTH OF OBSERVATION "few minutes"		8. NUMBER OF OBJECTS 1		9. COURSE	
10. BRIEF SUMMARY OF SIGHTING Cubic or diamond-shaped object, approx 5' x 5' x 9' was sighted by three separate sources at Duluth, Minn. Object moved slowly, close to ground, rising to clear trees and fences. Object gained speed as it gained altitude. First source sighted object at 1550 CST, saw object vary altitude from 3' to 40'. Second source sighted object at 1605 CST, claimed object was at 2000-3000', traveling 250-300 mph. Small boys were able to throw stones and hit object.				11. COMMENTS

STATEMENT

By
Mrs. [REDACTED] - taken 24 October 1952

Question: What was the shape of the object?

Answer : It was cubic in shape, one corner had something like a weight that went up and down and it was dark in color.

Question: What was the estimated size?

Answer : It was about 5 feet from corner to corner and from bottom to top tip about 9 feet. I judged the size from the fence that was in the vicinity. It was quite close to the ground, almost touching the ground when I first saw it.

Question: What was the color?

Answer : It was light tan or beige cream, more yellow.

Question : Did it have any markings?

Answer : I did not notice any markings although I first thought it could have been an advertisement of some kind. I did not see any markings.

Question: Did it make any sound?

Answer : It did not make any sound that I heard, I was inside at the kitchen window wondering what to get for supper and I was dumbfounded when I saw it.

Question: What would be the estimated speed?

Answer : It went very slow lifting from the ground. I saw it up over the hill then I couldn't see it any more.

Question: Would you say it had been on the ground?

Answer : At first it was close to the ground and I told my son to see if he could catch it.

Question: About how high was it?

Answer : When it went over the hill it was about 30 or 40 feet in the air and went quite fast. I thought it might get fast in the trees.

Question: What time was it when this happened?

Answer : It was about 5 or 10 minutes to four o'clock in the evening.

Question: How far was it from the tower?

[REDACTED]

Answer : Looking out of kitchen window it was about 75 feet away almost touching the ground, perhaps 3 or 4 feet. I was dumbfounded. I couldn't imagine what it could be. It disappeared behind the end of the house and when I ran out to see where it was it was 3 or 4 feet in the air. I thought it was caught in the trees but all of a sudden it went straight up into the air real fast about 6 or 7 feet.

Question: Did you notify anyone?

Answer : My husband notified the police and they wanted to know if I was all there. My husband notified the Duluth Herald and the party wanted to talk to me, I do not remember the name he gave me. I did give him the information that I have given you.

Question: What kind of material did you think it was?

Answer : It looked like plastic. It wasn't canvas or metal but it did look like plastic or rubber, looked hard and shiny.

Question: Can you think of anything else to tell us?

Answer : Can't think of anything else.

Mrs. [REDACTED]
Signature of Mrs. [REDACTED]

NOTE: Airport (Civilian) was called by [REDACTED] son of [REDACTED] and the call was transferred to 179th and then to 73rd. Son also called the Police and Herald. Clarifying question: "Did you notify anyone?"

STATEMENT

By

taken 24 October 1952

Question: What time did you first notice this object?

Answer : I was throwing rocks outside with some other boys when I first noticed it, it was about 12 feet from the ground, and it went straight up into the air.

Question: What color was it?

Answer : Looked white and shiny color.

Question: What about the bottom of it?

Answer : It was the same color all over.

Question : When did you first see it?

Answer : I was throwing rocks at tin cans when I noticed it. I was with 3 other kids and we all saw it.

Question: What did you do?

Answer : After I saw it I went after it and trailed it 2 or 3 blocks.

Question: How far was it before and above you?

Answer : About as high as the house. I hit it with a rock and it was about 12 feet from the ground and it went straight up in the air.

Signature of witness

aged 9 years.

NB-13

CRUISING ALTITUDES

CRUISING ALTITUDES WITHIN CONTROL AREAS AND ZONES--Aircraft at or more than 3000 feet above the surface within control areas and/or control zones must be flown at odd or even 1000-foot levels appropriate to the direction of flight. "Odd and even" indicators are shown on Coast and Geodetic Survey Radio Facility Charts.

The following rules will govern the altitude at which aircraft shall fly when making flights along civil airways:

Green and Red Airways

Eastbound flights. Aircraft making good a true course of from 0° (or 360°) to, but not including, 180° along a green or red civil airway shall fly at an ODD thousand-foot level above sea level (such as 3000, 5000, or 7000 feet).

Westbound flights. Aircraft making good a true course of from 180° to, but not including, 360° (or 0°) along a green or red civil airway shall fly at an EVEN thousand-foot level above sea level (such as 2000, 4000, or 6000 feet).

Amber and Blue Airways

Northbound flights. Aircraft making good a true course of from 270° to, but not including, 90° along an amber or blue civil airway shall fly at an ODD thousand-foot level above sea level (such as 3000, 5000, or 7000 feet).

Southbound flights. Aircraft making good a true course of from 90° to, but not including, 270° along an amber or blue civil airway shall fly at an EVEN thousand-foot level above sea level (such as 2000, 4000, or 6000 feet).

CRUISING ALTITUDES OUTSIDE CONTROL AREAS AND ZONES--When the flight visibility is less than three miles, aircraft must be flown at an altitude appropriate to the magnetic course as illustrated below.

VISUAL FLIGHT PLANS

The Civil Air Regulations do not require that a VFR flight plan be filed for a VFR flight. However, the filing of such a flight plan is desirable, and the CAA urges that VFR flights be covered by flight plan whenever practicable as such filing materially assists in search and rescue operations if such action becomes necessary. Flight plans may be submitted to the nearest CAA airway communications station either in person or by telephone. Flight plans may be filed by radio if no other means are available but this practice should be avoided whenever possible to reduce congestion of radio channels.

If filing the flight plan, the pilot should state the name of the CAA communications station with which he will close his flight plan. If the destination is not served by a CAA communications station, or is in Canada or Mexico, the method by which the arrival report will be filed must be clearly understood by all concerned. VFR flight plans are transmitted via CAA communications facilities only to the CAA communications station with which the pilot has stated his arrival report or closing of flight plan will be filed. One hour after the estimated time of arrival, if no notice of arrival is received, queries are sent out over CAA communications systems to determine the location of the aircraft. If no information concerning the aircraft is obtained after an exhaustive communications inquiry, search and rescue operations are inaugurated. In as much as the government may be put to considerable expense in determining the location of aircraft when an arrival report is not filed, it is vitally necessary that all pilots make certain that notice of arrival is filed. If flight is terminated prior to reaching the point of intended destination specified in the flight plan, pilots should contact the nearest CAA communications station and request that an arrival report be transmitted over CAA facilities to the CAA communications station with which the pilot stated the arrival report would be filed.

Pilots of aircraft operating on VFR flight plan who desire to make flight progress reports, should include in the report the phrase: "VFR FLIGHT PLAN FROM (blank) TO (blank)."

The flight plan shall contain the items listed under INSTRUMENT FLIGHT RULES - Flight Plan, except "Alternate Airport" and except that a visual flight rule flight plan should always specify "VFR" as a cruising altitude. The use of this term in lieu of an actual altitude indicates that the pilot intends to fly in accordance with Visual Flight Rules. Aircraft may be operated in accordance with VFR above a well defined cloud or other formation provided, climb to and descent from such "on top" flight can also be made in accordance with VFR.

SUMMARY: (Enter concise summary of report. Give significance in final one-sentence paragraph. List inclosures at lower left. Begin text of report on AF Form 112—Part II.)

One unidentified object, color tan or beige-cream, yellowish tint, cubic in shape, diameter about 9 feet, one side about 5 feet, dark object at bottom point appears to oscillate. No sound or exhaust trail. Moved slowly, an rise slowly and can rise vertically with speed. Observed by Mrs. [REDACTED] about 75 feet distant, 3 or 4 feet above the ground.

Winds at surface from 200° 19 knots, visability unlimited. No meteorological activity. No physical evidence, no interception or identification.

One t-33 landed in Duluth at 1553Z, other air traffic unknown.
