Had been in the park for a couple of hours, taking some cloud pictures with a Agfa Karat f 2.8 and green filter. Having used up the film in the camera I sat chatting with Miss [redacted] when I noticed a white sharply defined bar in a hole in the clouds which generally go over Point Dume via on-shore winds. I pointed it out to Miss A when a second bar appeared close to the first. Then others appeared and the second took off in line of sight and dwindled to nothing in under 3 seconds. Within 10 seconds it came back on same course and position. Taking off and stopping without acce- and deceleration. Sketch on Page 6 shows cloud and interconnected holes in same. Others appeared by simply appearing. Some disappeared and appeared in other locations at the same instant. Evidently shifting position laterally at such speed that they became invisible whilst in transit. Evidently having no inertia whatsoever. The one taking off in line of sight gave a clue to their speed as used then: 7 - 7 500 MPH. A speed attained without any time lag and lost the same. At one time they formed a perfect diamond formation in vertical echelon around an object which appeared larger, round and not clearly defined. All this time some were winking out one place and winking on in another place. Finally they just, first a few, then one after another, winked off and were gone.

The second sighting was 11.30 PM. Walking home a long block I noted a bright object 3 diameters beneath the moon. Watched it until I entered my door. When I came out again, a few seconds later, with field glasses, it was gone. But there was a faint vapor track going up at about 40° to the left.

A neighbor tells me she watched one a couple of months ago from her cottage in Topanga Canyon. Time: 2-4AM. It was evidently a closer sighting as her description only differs in that she claims that the corners were rounded. When hanging still it had a slight pendulous motion. But moved to other locations at slower speed but without acce- or deceleration. Disappeared at times but came back within minutes. Total time about 2 hours.

Whilst my observation indicates simple maneuvers of group tactics and movements, hers indicate a survey of a limited location. My second sighting also could have been holding a position for observation.

At no time did any of the objects observed show any deviation from a perfectly horizontal position. Never the slightest banking or slant.

I append a picture of clouds taken earlier that afternoon which, I believe, shows one of the objects. (circled in pencil.) Object evidently is partly hidden by cloud.

Their light was generated by them as they were between me and the sun. Showed no reflection. The one at night had a luminosity of -2-3 Their brightness was greater than that of the thin, sunlit, clouds.

Most remarkable, their sharp, rectangular definition. Like a ground metal bar.

Sir:

I wish to report two sightings, this date, of the so-called "flying saucer" objects. The first as follows:

"Watching the sun setting behind clouds from the park at Ocean Parkway I noticed first one then up to six bright objects in one group in a location surrounded mostly by clouds. The appeared and disappeared and first one then two such objects appeared about a mile to the left, of which one remained very visible for awhile then took off rapidly in a direction almost straight away. Diminishing in size and brilliance. After about 2-3 minutes this object came back, leaving a slight vapor trail. Then somewhat to the right and below the first group a wide vapor trail formed and a group of 7 or 8 such objects formed into a squadron formation and remained stationary for several minutes. Then some of the objects disappeared and others appeared in group No. 2. Then these bright objects simply disappeared whilst the clouds around the locations remained just as brightly lit. This ended about 12 - 15 minutes before sunset.

The second sighting was at 11:30 whilst walking home from Santa Monica Blvd. Directly beneath the moon, about 3 diameters, I noted an elongated bright object of about 1/4 moon diameter long and 1/16th thickness, stationary for several minutes. It took less than 30 seconds to open my door, drop the load and grab 6-35 Goerz glasses and look for the object. It was gone but left a vapor trail which went up left at about 40°. This object also was quite brilliant of a minus 2 rating. General search failed to show any trace of it. The sky around the moon was quite clear with just a few traces of wisps of cirrus."

I would be interested whether you have had any other reports on these objects.

Sincerely

/s/ [REDACTED]
