February 28, 1953

When I first observed the oval-shaped object, it seemed small and vaguely defined. In between 5 & 10 seconds, it grew larger as though approaching, and became sharp and clear in shape and color.

The light from the object was steady. No wobbling motion was apparent.

At first it was in the N.E.

After seeming to approach, it ceased to increase in brilliance and size.

It then moved slowly across the sky (keeping at the same distance from the horizon) to the S.E.

This movement took about 30 seconds. It stopped in the S.E., slowly grew smaller, as if moving away; became very vague in shape; then faded out completely. This fading out process took between 5 and 10 seconds.

Shortly before and sometime after observing the object I saw the moon. The moon was not in the same direction as the object, was not ~~at~~ the same height above the horizon, and did not have the same shape or color.

The direction of the movement of the object was almost the opposite of the wind direction at that time.
