F-6

Milton Radovsky, Capt, USAF

Icelandic Newspaper Pro-US

1. Copies of this report will be furnished the Commanding General, IDB, and Air Attache, England.

2. At about 2400Z, 18 February 1953, a bright light was observed by three men at Melrakkasletta (66-26N; 16-18W). The light was low and travelling south-east. It was not steady but faded and brightened several times and was observed for about 10 minutes.

3. There was no indication in the article as to altitude, speed or color of the light.

COMMENTS of the PREPARING OFFICER

4. Quite often there have been reports of flying saucers included in the local newspapers which arrived at this section long after they were observed, which is the main reason for their not having been reported. However, this section now has the services of a full-time translator and these reports will be available to us within a short period after the incidents occur and will be reported.

APPROVED:

MILTON RADOVSKY
Captain, USAF
Intelligence Officer
