Darlington, Wisconsin

31 May 1953

I. DESCRIPTION

Between 0320 CST and 1130 CST on 31 May 1953, eleven persons in the Darlington-Monroe area in Wisconsin sighted an unidentified aerial object. The object appeared as a steady white light coming generally out of the East and disappearing high overhead after 8 hours of continuous observation. It appeared low on the Eastern horizon, much brighter than the surrounding stars. It was reported to hover and then move at terrific speeds by several local inhabitants, including several county sheriffs and Ground Observer Corps members. Two of the policemen pursued the object in their squad car without gaining any noticeable ground. A telescope was employed to view the phenomenon by the GOC members. The weather during the time of sighting was unusually clear with a few scattered clouds carried on a north heading by the wind.

II. DISCUSSION

A newspaper account of the sighting came to the attention of ATIC and as a result an officer and an astronomer were sent to the area of the sighting. They interrogated eight of the eleven observers in attempting to piece together the variety of reports. Estimates of azimuth and elevation readings were obtained from different observers at varied locations in Monroe and Darlington for evenly spaced time intervals during the 8 hour period. The description of the object turned out to be the same with all observers - bright white. The description of the maneuvers varied, however, some stating the object rose slowly, others saying it moved at great speeds, and then hovered. The latter description usually came from observers while riding in a car. All agreed that the object was too bright to be a star and moreover it was seen in the daytime.

It was determined that the path of the object in question across the sky, its position at appearance and disappearance, very closely paralleled the path of the planet Venus on 31 May 1953. Venus on this day rose at 0310 CST and was at its approximate maximum brilliancy. Under ideal weather conditions it can be seen in the daytime, although this is rare. The fact that GOC personnel first sighted it at night and had the object pin-pointed for daylight observation allowed them to keep it under constant surveillance. Reports that the object maneuvered radically usually came from persons driving in cars while observing the object. If Venus is stared at for any length of time without any balancing reference point, it can appear to perform erratic maneuvers.

GOC personnel alerted the Chicago filter center and jets were scrambled to investigate. This was during daylight observation and the jets, although vectored toward the object by visual directions from Darlington, were unable to locate the unknown.

Special Action Report from Chicago Filter Center

1 June 1953

31 May 1953 3:43 AM CST

Monroe, Wisconsin

Object sighted - Bright white light - no glare

Direction of Object - Going east of observation post and climbing - losing sight due to sun rise.

31 May 1953 7:55 AM CST

Object appeared as bright star, not flickering, very high, estimated
? altitude 10 miles, moving west. Astronomer B. [REDACTED] unsuccessful in
locating object in telescope.? He said, "It might be a planet".

31 May 1953 8:23 AM CST

Pinpoint of light drifting westwardly.

31 May 1953 8:33 AM CST

Object heading south and higher. Aircraft overhead - lower than object

31 May 1953 9:12 AM CST

Contact of object lost due to haze in the sky - Object changed direction,
is now headed north. X ♀

31 May 1953 9:17 AM CST

Resighted object. Headed eastward. Still a silver speck - Lost contact
again at 9:25 AM CST. X ♀

31 May 1953 9:30 AM CST

Object heading northwest then west. Still high.

31 May 1953 10:05 AM CST

Radar called in No Tell on object.

1. Any real (!) astronomer would know Venus!
2. No change of direction if star or planet
3. Radar could not pick up star or planet

A -

- i) Winds aloft for 0600 ?
- ii) How about a balloon-device from General Mills & Minneapolis?

31 May 53, 0343C to 1005C.

What about the possibility that
it was Venus — that the con-
dition of the atmosphere was
just right to produce "wandering"
effect and enable it to be seen
after the sun was quite high.
If this were true, then the
Radar blip would have to be
accounted for otherwise.

Q: Did the object change
position with respect to
the sun?
This would make or break
the Venus theory.

2 June 1953

Mr. J. Allen Hynek
Director, Emerson McMillan Observatory
Ohio State University
Columbus 10, Ohio

Dear Mr. Hynek:

Inclosed is a clipping concerning a Blue-White Light sighted in
South Western Wisconsin, Sunday, 31 May 1953.

At present no other information is available at this Detachment.

Very Truly Yours,

Robert E. Sherbundy
ROBERT E. SHERBUNDY
Captain, USAF
Detachment Commander

**Blue-White Light
Like Second Moon
Seen at Darlington**

DARLINGTON, Wis. — (U.P.) — Several persons told today how they watched an "enormous blue-white light like a second moon" light up the Wisconsin countryside near here early Sunday.

The witnesses included a sheriff, several policemen, a reporter and a volunteer civil defense sky-watcher.

The unexplained object was not seen by the astronomers at Yerkes Observatory in Williams Bay, Wis., just miles east of here. There were rumors, however, that the Air force sent jet interceptors into the sky to investigate.

Air force spokesmen at Travis air base and the Chicago filter center would not confirm the reports.

One of the first persons to spot the object was Policeman Glenn Winslow. He said a full moon was out when, at about 3:15 a.m., he noticed "it was very bright, getting brighter."

"I thought I was seeing things," so I radioed the Monroe, Wis. police station 35 miles east of here."

The policeman awakened Louis Graham, a United Press correspondent for this area, who accompanied Winslow to a hill on the edge of Darlington. They were joined there by Lafayette County Sheriff Lawrence James.

All the witnesses agreed the light was shaped like a globe— "like a balloon with an internal blue-white light."

They sat until well past seven, watching the object.

Ed. J. F. Superintendent of a skywatch observation post at Monroe, said he saw the light about 3:30 a.m. James and the Darlington witnesses said they found it difficult to see the light after dark.

Shaver said he heard jet pilots talking to the Chicago filter center by radio about the light. Authorities would not confirm this.

WASHBURN OBSERVATORY
UNIVERSITY OF WISCONSIN

MADISON 6, WISCONSIN

June 6, 1953

Miss Jonnie R. Gluck
Meteoritics Research
Emerson McMillin Observatory
Ohio State University
Columbus 10, Ohio

Dear Miss Gluck:

We have no eye-witness reports of the phenomenon observed in southwestern Wisconsin on the morning of the 31st of May, 1953. It would have seemed to be a duplication of effort for us to attempt an investigation of this sort, since the fighter squadron based at Truax Field near Madison does take care of this.

Captain John M. Fox informs me that he has made a report through Air Force channels of his investigation. He believes that it was moonlight on some scattered low-lying clouds against a background of high overcast. This jibes with what I saw about midnight here in Madison.

Very truly yours,

A. E. Whitford

A. E. Whitford
Director

AEW:pac

8 June 1953

1st Lt. Robert Olsson
ATTC Wright-Patterson AFB
Dayton, Ohio

Dear Lt. Olsson,

In connection with the sightings of 31 May in Wisconsin the following phone calls were made for additional information:

(1) To Mr. Glenn Winslow, a Darlington police officer, who reported he saw object first at 0315, overhead, moved NE, could see it move, was bright enough to light up surroundings (subjective?). He reported it on police radio and another car set after it, presumably in a NE direction, at 75 mph but could not keep up with it. Direction of object changed to South later. Object was observed by Winslow for more than 4 hours, becoming much dimmer as daylight approached.

Overhead sighting, brightness, apparent motion, NE heading and change in direction rule out Venus.

Winslow stated that police officers in Monroe sighted the same object. Winslow familiar with Venus, states object was not Venus. Was asked to observe Venus before sunrise as soon as possible to double check. Also stated object almost as large as the moon.

(2) Called [redacted], an amateur astronomer in Milwaukee. Made no sighting himself but has been receiving reports. He is the head of one of Jennie's standby amateur groups. Stated he would like to have me meet with a representative from Sturgen Bay, Wisconsin, of the "Aerial Phenomena Research Organization," a civilian group that collects sightings.

(3) Called J.B. Sharer, Monroe GOC Observation Post. Object not reported to him until 0815. Object starlike and difficult to pick out, moving west. Was directly South at 0900. NOTE: Venus on that day was directly South at 0900. His evidence all points to Venus.

(4 & 5) Jennie also called Chicago and Green Bay Filter Centers to see if anything had been called in to them.

Green Bay had no direct reports but later sent down a newspaper clipping from Darlington paper. Chicago had a sequence of reports from the Monroe observation post (J.B. Sharer). Chicago had a radar track on an object supposedly the same as was sighted from the ground. The radar track was evidently established at 1005.

It seems probable on the present evidence that some observers saw Venus and others definitely did not and probably saw a balloon.

4

II. Recently Project Blue Book sent five of its best unsolved 1953 sightings to Dr. H. P. Robinson, California Institute of Technology, for his review and comment. The sightings included Lake AFB, Continental Divide, Sea of Japan, and Port Huron, Michigan.

III. The system of transmitting FLYOBRPTS to McMillan Observatory with the possibility of identifying them as astronomical bodies is working out well. Their system was instrumental in identifying the object of the Darlington, Wisconsin, sighting as well as establishing the ^{fact} ~~possibility~~ that the planet Venus has been the cause for ^{almost} all the sightings coming from Japan in recent months.

Lt R.M. Olsson
ATIAE-5

What's Seen! Was It Flying Saucer?

Was the bright disc which floated over Darlington and Monroe, Wis., early Sunday morning one of those things that astronomers modestly term a "questionable object" — flying saucer to us credulous laymen?

The experts would like to know. So would a good many people who saw it, including sheriffs and police officers of the two towns.

Southern Wisconsin was alerted by police radio at 3:15 a. m. by Darlington Police Officer Glen Winslow, who sighted a bright blue-white light. He described it as bigger than the full moon which was shining at the time. The object had appeared west of the city, moving northeast.

HOVERED OVER MONROE

Winslow picked up Sheriff Lawrence James and Louis Graham, a Darlington newspaperman. At 3:45 a. m. they stood on a hill south of the city, watching the light travel east from Darlington. It appeared to hover over Monroe, then moved southeast toward Chicago.

At 4:50 a. m., in early daylight, Graham said. Meanwhile, Monroe police and Green County sheriff's deputies there, alerted by radio, were observing it. They watched it until 6:30 a. m. Said John Lewis, a night dispatcher at the Monroe sheriff's office:

"By the time I saw it, at 6:30, it didn't look much bigger than a star. It seemed to waver, moving south a ways, then straight up, then south again. The sheriff's department had sent a car out Highway 11. It stayed in front of them although they were going 70 miles an hour."

Edward A. Halbach, 2941 S. 52nd St., director of the Milwaukee Astronomical Observatory, said he would appreciate cards from anyone who saw the object, giving details. He collects all such information for a government sponsored record kept at Ohio State University, Columbus, O.

APPEALS FOR WITNESSES

He suggested it might have been a weather balloon. So near sunrise, a high object might catch the sun although the earth

still is dark, a fact that could account for its brilliant light, he said.

BALLOONS RULED OUT

But officials of the Airport Weather Bureau station believed that theory, too, is almost ruled out. Balloons about 4 feet across were inflated at 3 a. m. at Madison, La Crosse, and Moline, Ill. The wind aloft was about due west.

But—the balloons climb at an average 1,000 feet a minute. Within 15 minutes they would have been nearly invisible from earth. And they ordinarily stay aloft only 45 to 50 minutes.

So—what was it? Graham commented:

"I'm inclined to pooch-pooch the whole thing—only I saw it myself."

Fuel octane ratings listed by number are those available to civil aircraft, unless otherwise noted.

Military fuel is listed by letter code indicating octane ratings as follows: A+115/145, A: 100/130, B: 91/98, C: 73 or 80, J: JP-1, 3.

The above listing does not include Air Force Aerodromes.

*Joint civil and military operations; Air Force facilities at these fields are not listed.

Consult the latest Airman's Guide for changes in data subsequent to date of chart.

5-25-51

SEARCH AND RESCUE

Search and Rescue Service is a life saving service provided through the combined efforts of the CAA, Air Force, and Coast Guard who are assisted by other organizations such as the Civil Air Patrol, Sheriffs Air Patrol, State Police, and such other agencies as may be available. It provides search, survival aid, and rescue of personnel of missing or crashed aircraft.

All you need to remember to obtain this valuable protection is:

1. File a Flight Plan with a CAA Airway Communications Station in person or by telephone or radio.
2. File an Arrival Report.
3. If you land at a location other than intended destination, report the landing to the nearest CAA Communications Station.
4. If you land enroute and are delayed more than an hour, report this information to the nearest communications station.
5. Remember that if you fail to report within one hour after your E.T.A., a search will be started to locate you. If you fail to report within three hours after your E.T.A., the full facilities of the Search and Rescue Service will be activated.

Searches are expensive, they inconvenience other people, and on numerous occasions the lives of other pilots are sacrificed when searching for lost or overdue pilots. SO, FILE AN ARRIVAL REPORT!

GROUND TO AIR EMERGENCY CODE DISTRESS SIGNALS

REQUIRE DOCTOR, SERIOUS INJURIES ----- I	REQUIRE SIGNAL LAMP WITH BATTERY, AND RADIO ----- I	REQUIRE FUEL AND OIL ----- L
REQUIRE MEDICAL SUPPLIES ----- II	INDICATE DIRECTION TO PROCEED ----- K	ALL WELL ----- LL
UNABLE TO PROCEED ----- X	AM PROCEEDING IN THIS DIRECTION ----- ↑	NO ----- N
REQUIRE FOOD AND WATER ----- F	WILL ATTEMPT TAKE-OFF ----- >	YES ----- Y
REQUIRE FIREARMS AND AMMUNITION ----- ∇	AIRCRAFT SERIOUSLY DAMAGED ----- L7	NOT UNDERSTOOD ----- JL
REQUIRE MAP AND COMPASS ----- □	PROBABLY SAFE TO LAND HERE ----- Δ	REQUIRE MECHANIC ----- W
	IF IN DOUBT, USE INTERNATIONAL SYMBOL ----- SOS	

INSTRUCTIONS:

1. Lay out symbols by using strips of fabric or parachutes, pieces of wood, stones, or any available material.
2. Provide as much color contrast as possible between material used for symbols and background against which symbols are exposed.
3. Symbols should be at least 10 feet high or larger, if possible. Care should be taken to lay out symbols exactly as shown to avoid confusion with other symbols.
4. In addition to using symbols, every effort is to be made to attract attention by means of radio, flares, smoke, or other available means.
5. When ground is covered with snow, signals can be made by dragging, shoveling or tramping the snow. The depressed areas forming the symbols will appear to be black from the air.
6. Pilot should acknowledge message by rocking wings from side to side.

VISUAL EMERGENCY SIGNALS

NEED MEDICAL ASSISTANCE - URGENT USED ONLY WHEN LIFE IS AT STAKE 	ALL OK - DO NOT WAIT 	CAN PROCEED SHORTLY - WAIT IF PRACTICAL 	NEED MECHANICAL HELP OR PARTS - LONG DELAY 	DO NOT ATTEMPT TO LAND HERE 
LIE PRONE	WAVE ONE ARM OVERHEAD	ONE ARM HORIZONTAL	BOTH ARMS HORIZONTAL	BOTH ARMS WAVED ACROSS FACE
LAND HERE 	USE DROP MESSAGE 	OUR RECEIVER IS OPERATING 	NEGATIVE (NO) 	AFFIRMATIVE (YES) 
BOTH ARMS FORWARD HORIZONTALLY, SQUATTING AND POINTING IN DIRECTION OF LANDING - REPEAT	MAKE THROWING MOTION	CUP HANDS OVER EARS	WHITE CLOTH WAVED HORIZONTALLY	WHITE CLOTH WAVED VERTICALLY
PICK US UP - PLANE ABANDONED 	AFFIRMATIVE (YES) 	NEGATIVE (NO) 	HOW TO USE THEM IF YOU ARE FORCED DOWN AND ARE ABLE TO ATTRACT THE ATTENTION OF THE PILOT OF A RESCUE AIRPLANE, THE BODY SIGNALS ILLUSTRATED ON THIS PAGE CAN BE USED TO TRANSMIT MESSAGES TO HIM AS HE CIRCLES OVER YOUR LOCATION. STAND IN THE OPEN WHEN YOU MAKE THE SIGNALS. BE SURE THAT THE BACKGROUND, AS SEEN FROM THE AIR, IS NOT CONFUSING. GO THROUGH THE MOTIONS SLOWLY AND REPEAT EACH SIGNAL UNTIL YOU ARE POSITIVE THAT THE PILOT UNDERSTANDS YOU.	
BOTH ARMS VERTICAL	DIP NOSE OF PLANE SEVERAL TIMES	FISHTAIL PLANE		

PILOTS GUIDE FOR COMMUNICATING WITH AIRWAY STATIONS

PILOTS - never hesitate to use your radio. Remember that talking by radio is almost the same as talking on your home telephone.

The following are typical examples of two-way communication with airway stations.

IDENTIFICATION OF AIRWAY STATIONS: CAA Airway Communications Stations are identified by the name of the station followed by the word "RADIO".

Example: "CLEVELAND RADIO".

IDENTIFICATION OF AIRCRAFT: Your aircraft is identified by the make of aircraft followed by the certificate number and letter suffix, if any.

Example: "STINSON ONE THREE SIX FIVE".
"STINSON ONE THREE SIX FIVE-Y".

Example of pilot calling an airway station:

"CLEVELAND RADIO - THIS IS - STINSON ONE THREE SIX FIVE - OVER".

After communication has been established, an abbreviated form of identification may be used, if desired, using the last three units of the certificate number only.

The airway station will normally answer on the radio range or radiobeacon frequency. If reply is desired on other than the radio range or radiobeacon frequency, pilots should indicate the frequency on which the station reply is expected.

Example: "CLEVELAND RADIO - THIS IS - STINSON ONE THREE SIX FIVE - REPLY ON ONE ELEVEN POINT ONE MEGACYCLES - OVER".

After the airway station has answered your call, proceed with your message without further call up other than preceding the message with the aircraft identification. Your message may consist of your position report, a request for weather data or other information that may be required to assist you to your destination.

Example: "STINSON ONE THREE SIX FIVE - OVER CLEVELAND AT ELEVEN TWENTY - FOUR THOUSAND FEET ON VFR FLIGHT PLAN FROM YOUNGSTOWN TO TOLEDO - WHAT IS THE WEATHER AT TOLEDO - OVER".

If you are flying VFR, a position report is not required, however, it is to your advantage that the stations along your route of flight know your position at all times in order that assistance can be rendered should you encounter difficulty.

Flight plans may be filed while in flight, with a CAA Airway Communications Station, if your departure was from an airport not served by such a station.

The word "ROGER" is used to acknowledge receipt of a message.

The word "OUT" is used when a conversation is ended and no response is expected.

Example: "STINSON ONE THREE SIX FIVE - ROGER, OUT".

The words "SAY AGAIN" are used if a message was not understood and a repetition is desired.

The words "STAND BY" are used to indicate that a return call will be made as soon as practicable.

Examples: "STINSON ONE THREE SIX FIVE - SAY AGAIN, OVER".
"STINSON ONE THREE SIX FIVE - STAND BY".

ENROUTE FLIGHT SERVICE

All airway communications stations are ready to provide pilots with enroute flight information or assistance at any time. You may call any CAA RADIO for latest weather along your route of flight, upper wind velocities, airport conditions, and other flight information. If you become lost or uncertain of your position, call any CAA RADIO. Personnel at CAA airway communications stations are trained to assist pilots in establishing position by any of the following methods: (a) Visual reference to terrain features; (b) Low frequency radio range orientation; (c) VHF omni-range indications (triangulations).

V.H.F. OMNI-RANGE (VOR)

The V.H.F. omni-range operates within the 112-118 megacycle band. In this band it is relatively free from atmospheric and precipitation static and interference from other radio stations. Furthermore, it is not limited to four courses as is the A-N range, but provides definite guidance on any course, to or from the station, the pilot may select. That is why it is called the Omni (Directional) Range. At minimum instrument altitudes the VOR gives reliable indications up to about 50 miles, depending on enroute terrain.

In flying the V.H.F. omni-range, the pilot uses three basic instruments. The first is the Flight Path Deviation Indicator (cross-pointer instrument), the same type used for the visual-aural range (VAR) and the ILS localizer. The vertical needle of this instrument tells the pilot whether he is right or left of the desired course. The second is an Omni-bearing Selector, manually operated by the rotation of a small knob, by which the pilot selects the course he desires to fly. When the cross-pointer needle is centered, the omni-bearing selector indicates the magnetic bearing of the aircraft either to or from the station. The third is a "TO-FROM" indicator which shows whether the bearing indicated by the Omni-bearing Selector is from or to the station. Furthermore, the "TO-FROM" needle can tell a flier when his aircraft is too far from the VOR or is otherwise receiving a weak signal. In this case the needle points to a red sector instead of TO or FROM.

In operation, the pilot selects a course by adjusting the omni-bearing selector to the desired magnetic bearing, and then maintains it by keeping the cross-pointer needle centered. If the aircraft is correctly aligned with the TO-FROM indications, when the needle swings to the right, for example, it indicates that the course selected lies to the right.

For example, an aircraft is due south of a VOR station. If its pilot desires to fly to the station, he sets the omni-bearing selector to indicate 0°. The "TO-FROM" indicator will then point to the word "TO". As the aircraft passes over the station the "TO-FROM" indicator will point to the word "FROM". If a turn of 180° is made north of the station, although the vertical cross-pointer needle will again become centered, the "TO-FROM" indicator will still point to "FROM". The pilot, however, will now find that he must fly "Away from the needle" to stay on course. This shows him that the "TO-FROM" indicator is incorrect. So, the pilot now rotates his omni-bearing selector to 180°. After he has done this, the "TO-FROM" indicator shifts to the "TO" position, and flying "Toward the needle" will keep him on course.

TABLE OF V.H.F. RECEPTION DISTANCES

With the increasing use of VHF and UHF frequencies for communication and navigation it appears desirable to publicize the reception distances for these frequencies. They, therefore, are tabulated below:

Feet Above Ground Station*	Reception Distance** - Statute Miles
500	30
1,000	45
3,000	80
5,000	100
10,000	140
15,000	175
20,000	200

*No physical obstruction intervening.

**Based on zero elevation of the facility.

If you are using a VHF transmitter, remember that its effective range increases with your altitude. Don't attempt to contact a station unless you are within "line of sight"

U.S. WEATHER BROADCASTS AND TRANSMISSIONS

All continuously operated CAA radio range and radio beacon stations having voice facilities on the range or radio beacon frequencies broadcast weather reports and airway information at 15 and 45 minutes past each hour. The 15-minutes past-the-hour broadcast is an "airway" broadcast consisting of weather reports from important terminals located on airway (s) within approximately 400 miles of the station. The 45-minutes-past-the-hour broadcast is an "area" broadcast consisting of weather reports from locations within the flight information area of the station.

The broadcast consists of the local weather report and the latest available surface reports from other locations. Reports more than one hour old are not broadcast. Local winds aloft are broadcast 4 times after the broadcasts at 6:15 and 12:15 A.M., and P.M., E.S.T. The velocities of winds aloft are broadcast in knots - not miles.

At selected stations the Weather Bureau provides a local terminal forecast covering the next two hours. This forecast is broadcast, when available, immediately following the local weather report.

Pilots enroute are requested to avoid, if possible, calling airway communications stations at or about 15 and 45 minutes past the hour (which are the scheduled broadcast times) to request weather information, as such calls may delay starting of scheduled broadcasts and cause inconvenience to other persons who are dependent on the broadcasts for weather reports.

VHF OMNI-DIRECTIONAL RADIO RANGE DESCRIPTION

The VHF omni-directional range provides visual track guidance along any selected radial from the station out to a distance of approximately 50 miles when flying at the minimum instrument altitude. These ranges operate in the frequencies between 112 and 118 megacycles and require a special omni range type receiver to make use of the navigational features. Also provided are simultaneous voice communication and 3-letter (coded) identification. In operation, the pilot selects a course by setting the pointer on a course or radial selector to the desired magnetic bearing and then flies that course by reference to a cross pointer instrument.

CRUISING ALTITUDES

CRUISING ALTITUDES WITHIN CONTROL AREAS AND ZONES—Aircraft at or more than 3000 feet above the surface within control areas and/or control zones must be flown at odd or even 1000-foot levels appropriate to the direction of flight. "Odd and even" indicators are shown on Coast and Geodetic Survey Radio Facility Charts.

The following rules will govern the altitude at which aircraft shall fly when making flights along civil airways:

Green and Red Airways

Eastbound flights. Aircraft making good a true course of from 0° (or 360°) to, but not including, 180° along a green or red civil airway shall fly at an **ODD** thousand-foot level above sea level (such as 3000, 5000, or 7000 feet).

Westbound flights. Aircraft making good a true course of from 180° to, but not including, 360° (or 0°) along a green or red civil airway shall fly at an **EVEN** thousand-foot level above sea level (such as 2000, 4000, or 6000 feet).

Amber and Blue Airways

Northbound flights. Aircraft making good a true course of from 270° to, but not including, 90° along an amber or blue civil airway shall fly at an **ODD** thousand-foot level above sea level (such as 3000, 5000, or 7000 feet).

Southbound flights. Aircraft making good a true course of from 90° to, but not including, 270° along an amber or blue civil airway shall fly at an **EVEN** thousand-foot level above sea level (such as 2000, 4000, or 6000 feet).

CRUISING ALTITUDES OUTSIDE CONTROL AREAS AND ZONES—When the flight visibility is less than three miles, aircraft must be flown at an altitude appropriate to the magnetic course as illustrated below.

VISUAL FLIGHT PLANS

The Civil Air Regulations do not require that a VFR flight plan be filed for a VFR flight. However, the filing of such a flight plan is desirable, and the CAA urges that VFR flights be covered by flight plan whenever practicable as such filing materially assists in search and rescue operations if such action becomes necessary. Flight plans may be submitted to the nearest CAA airway communications station either in person or by telephone. Flight plans may be filed by radio if no other means are available but this practice should be avoided whenever possible to reduce congestion of radio channels.

If filing the flight plan, the pilot should state the name of the CAA communications station with which he will close his flight plan. If the destination is not served by a CAA communications station, or is in Canada or Mexico, the method by which the arrival report will be filed must be clearly understood by all concerned. VFR flight plans are transmitted via CAA communications facilities only to the CAA communications station with which the pilot has stated his arrival report or closing of flight plan will be filed. One hour after the estimated time of arrival, if no notice of arrival is received, queries are sent out over CAA communications systems to determine the location of the aircraft. If no information concerning the aircraft is obtained after an exhaustive communications inquiry, search and rescue operations are inaugurated. In as much as the government may be put to considerable expense in determining the location of aircraft when an arrival report is not filed, it is vitally necessary that all pilots make certain that notice of arrival is filed. If flight is terminated prior to reaching the point of intended destination specified in the flight plan, pilots should contact the nearest CAA communications station and the request that an arrival report be transmitted over CAA facilities to the CAA communications station with which the pilot stated the arrival report would be filed.

Pilots of aircraft operating on VFR flight plan who desire to make flight progress reports, should include in the report the phrase: "VFR FLIGHT PLAN FROM (blank) TO (blank)."

The flight plan shall contain the items listed under INSTRUMENT FLIGHT RULES - Flight Plan, except "Alternate Airport" and except that a visual flight rule flight plan should always specify "VFR" as a cruising altitude. The use of this term in lieu of an actual altitude indicates that the pilot intends to fly in accordance with Visual Flight Rules. Aircraft may be operated in accordance with VFR above a well defined cloud or other formation provided, climb to and descent from such "on top" flight can also be made in accordance with VFR.

THE KOCH CHART FOR ALTITUDE AND TEMPERATURE EFFECTS

EXAMPLE: The diagonal line shows that 230% must be added for a temperature of 100° and a pressure altitude of 6,000 feet. Therefore, if your standard temperature sea level take-off distance, in order to climb to 50 feet, normally requires 1,000 feet of runway, it would become 3,300 feet under the conditions shown. In addition, the rate of climb would be decreased 76%. Also, if your normal sea level rate of climb is 500 feet per minute, it would become 120 feet per minute.

This chart indicates typical representative values for "personal" airplanes. For exact values consult your airplane flight manual. The chart may be conservative for airplanes with supercharged engines. Also remember that long grass, sand, mud or deep snow can easily double your take-off distance.

Thin Air Red air.

Do you realize to Stapleton

Do you realize titude of yo

The rarified : light plane ha altitude is on

This plane m tried it at 5,0

LOSS OF AIRCRAFT PERFORMANCE DURING HOT WEATHER

Thin Air Reduces Lift. You get thin air at high altitudes and in hot weather. The hotter the temperature, the thinner the air.

Do you realize that Kansas City Airport with an elevation of 744 feet above sea level can have an effective elevation identical to Stapleton Field, Denver, at 5325 feet above sea level, under conditions of extreme heat and low pressure?

Do you realize that Brees Airport at Laramie, Wyoming, at 7273 feet above sea level, can be above the safe operational altitude of your aircraft during hot weather?

Note: The effective elevation of Brees Airport at 86°F, for example, is 10,250 feet-Caution!

The rarified air at higher altitudes lowers the efficiency of engine and propeller, and lessens a plane's rate of climb. A typical light plane has a maximum rate of climb at sea level of 420 feet per minute, whereas its maximum rate of climb at 5,000 feet altitude is only 225 feet per minute.

This plane might be able to clear a 400 foot hill or factory stack located a few miles from a sea level airport, but if the pilot tried it at 5,000 feet, he would smack right into the middle of the obstruction.

Remember: Any increase in operating altitude (due to elevation or high temperature) greatly increases take-off and landing roll.

ATMOSPHERIC DENSITY AT SEA LEVEL ENABLES A PLANE TO TAKE OFF IN A RELATIVELY SHORT DISTANCE

THE DISTANCE REQUIRED FOR A TAKE-OFF INCREASES WITH THE ALTITUDE OF THE FIELD

5 June 1953

Miss [REDACTED]
Emerson McMillin Observatory
Ohio State University
Columbus 10, Ohio

Dear Miss Gluck:

As I promised at our recent meeting at Ohio State, you will find inclosed a copy of the report of an unidentified light over Darlington, Wisconsin, on 31 May 1953. This was taken from the Dayton Journal Herald.

As yet, I have received no answer to our query to Truax Field at Madison and as soon as this comes in, I will give you a call and we can compare notes.

Thanks again for your quick action on this matter; I hope we can nail this sighting down. I think probably Dr. Hynek is on the right track when he says that one was a meteor and the other Venus.

Best regards,

1st Lt R. M. Olsson

Dr. A. J. Hynek
McMillin Observatory
Ohio State University
Columbus, Ohio

Dear Dr. Hynek:

This concerns the press release on the Darlington sighting for Mr. [redacted] reporter acquaintance and should be forwarded to Mr. [redacted] in Milwaukee immediately.

A synopsis of the Darlington sighting could go something like this:

Between 3:20 A.M. and 11:30 A.M. on 31 May eleven persons in the Darlington-Monroe area in Wisconsin sighted an unidentified aerial object. The object appeared as a steady white light coming generally out of the east and disappearing high overhead after eight hours of observation. It was reported to hover and then attain terrific speeds by several local inhabitants including several county sheriffs and Ground Observer Corps members. Two policemen pursued the object in their squad car at 70 mph and said that the object seemed to be outracing them. A telescope was employed to view the phenomenon by the GOC observers.

A newspaper account of the incident came to the attention of the Air Technical Intelligence Center, Wright-Patterson Air Force Base, Ohio, the Air Force organization officially responsible for investigating such reports. As a result, an officer and an astronomer were dispatched to the area of sighting where they proceeded to investigate all the persons involved and attempted to piece together the many reports. Two observers, one a county sheriff, sighted the object from Darlington, Wisconsin, and since it appeared to be going toward Monroe, it was alerted by radio.

Police dispatchers in Monroe alerted the local GOC post of the unknown object and were informed that the GOC had it under observation. This post last saw the object at 11:30 A.M. in broad daylight. The weather throughout the observation was clear with scattered clouds.

ATIC personnel obtained azimuth and elevations readings from different observers at varied locations for different times covering the 6 hour period. The description of the object turned out to be the same with all observers - bright white. The description of maneuvers varied, however, some stating the object moved slowly, others saying it moved at great speeds and then hovered. All agreed that the object was too bright to be a star and moreover it was seen in the daytime.

15 June 53

31 MAY - DARLINGTON
LUISC.

It was determined that the path of the object in question, that is its position at appearance and disappearance, very closely paralleled the path of the planet Venus. Venus on 31 May 1953 is near its maximum brilliancy and under ideal weather conditions can be seen in the daytime, although this is rare. Usually only trained observers can detect it. If Venus is stared at for any length of time, it will appear to maneuver erratically and attain great speeds, all these characteristics having been attributed to the unknown object sighted over Darlington.

General Outlook on Project Blue Book:

Since 1947 3,000 reports of unidentified aerial objects have been turned in to the Air Force. In 1952 alone 1700 reports were recorded. The Air Technical Intelligence Center objectively examines each report and feels that it can explain 80 to 90% as known phenomena or manmade objects. There is, however, the remaining 15% which cannot be explained to the Air Force's satisfaction. Some of these are truly perplexing reports from highly credible people, others are so sketchy that they aren't worth scientific investigation.

Some of the phenomena which have caused "flying saucer" reports are such things as weather balloons observed in the daytime with the sun glinting off them or at night with their pilot light visible; upper air research balloons; aircraft under peculiar light conditions; astronomical activity such as meteor showers, bright planets such as Venus, etc.; light phenomena as a result of ice crystals or clouds; "sun dogs" or a second mock image of the sun due to cloud conditions. There are some unidentified radar return, however, a majority of them are caused by frequency interference, temperature or dew point inversions, and thunderstorms. The best type of sighting ATIC receives as far as instrumentation or scientific data is concerned are the combination visual and radar detections.

The Air Force does not pretend to be able to explain all "flying saucer" reports but it does feel that it knows enough about the entire subject to say that there is no existing danger to the United States nor is there anything to cause undue speculation or hysteria. Of all sightings 80 or 90% have been explained. The Air Force believes that it has the responsibility of assuring itself and the public with as much conclusiveness as possible on a sometimes nebulous subject, that nothing unforeseen is going on in our skies. After reviewing 3,000 reports ATIC and general scientific opinion which it has consulted find that there is absolutely no proof that space travel from another planet is going on.

Sincerely,

R. M. OLSSON
1st Lt, USAF
Chief, Project Blue Book

Report of J. A. Hynek
on the Darlington-Monroe sighting
31 May 1953

The nature of the newspaper and other reports including those obtained personally by telephone from two of the original observers led this investigator to believe that the incident was worthy of detailed investigation. The reports were conflicting, as evidenced, for instance, by the following excerpts:

"...an enormous blue-white light like a second moon."

"...it was suddenly getting brighter than usual."

"...like a balloon with an internal blue-white light."

"...it didn't look much bigger than a star. It seemed to waver, moving south a ways, then straight up, then south again."

"...as big as the moon."

"...it passed slightly to the south of Darlington, between us and the moon."

"...stayed in front of them, although they were going seventy miles an hour."

"...about the size of a grapefruit, traveling very high and almost due East."

"...pinpoint of light drifting westwardly."

It was felt by this investigator that if this case could be cleared up it might shed light on similar reports and particularly on the vagaries of the human element in reporting. Accordingly, this investigator and Lt. R. Olsson journeyed to Truax Field, Madison, Wisc.,

where they were extended the courtesy of a staff car and a driver.

It might be best, if the reader does not wish to study the interrogation in any detail, to state the opinions of these two investigators.

It is the considered opinion of this investigator (and concurred in by Lt. Olsson) at the conclusion of the interrogation of about a dozen people that the object sighted was the planet Venus. This, despite the flamboyant descriptions of size and motion given by some observers, the conclusion is based on the fact that whenever it was possible to obtain actual positions (altitude-azimuth) of sightings from numerous independent observers, the positions and times corresponded very closely with the calculated positions of the planet Venus from 0320 to 1120 on 31 May 1953. That is, there was no residual specific evidence that the object was sighted in any other portion of the sky than that occupied by Venus. In particular, no agreement whatever was obtained concerning rapid angular velocities where as agreement was very strong as to position during the eight hour interval of observation. The evidence however does not exclude the possibility that a bright meteor traveling toward, and disappearing at, the approximate rising position of Venus, had been the triggering incident, although it seems more probable to the investigators that the observers' first glimpse of Venus (then nearly at its most brilliant phase) rising in the east may have given the momentary illusion of rapid motion. It must be remembered that none of the observers were tutored in matters astronomical, and hence unaware that on occasion Venus can be so bright as to be visible in the daytime.

The itinerary of investigation was as follows:

Mr. Scherer, head of the GOC at Monroe, Wisconsin, was the first to be questioned. He was closely followed by Mr. Ruby, Mr. Hallaway, Mr. Guess and others, all of the GOC post. Mr. Hallaway was requested to remain at the observation post throughout the night to note the rising of Venus and its visibility after daylight. The investigators proceeded then to Darlington, promising to return to check with Mr. Hallaway after dawn.

Mr. Glenn Winslow, policeman at Darlington, met the investigators in his patrol car and "re-enacted the episode" as faithfully as his memory permitted. He was quite vague about the original sighting but much surer about the position and later motion of the object in the eastern sky. He drove the investigators to the point from which he radioed police officers in Monroe (to the east of Darlington) telling them that an object was approaching at great speed. The investigators contacted Monroe officers via the Winslow car radio and interviews were arranged for later in the morning. Mr. Winslow in particular was unable to reconcile the notion of rapid motion with the fact that he observed the object for several hours. His ability as an observer must unfortunately be given a very low rating. He appeared more intent on repeating vague statements than on attempting to be scientifically helpful.

The investigators returned to Monroe and found not only Hallaway at the observation post but about half-dozen observers. One of these, Burel Guess, local amateur astronomer, had set up his telescope and was following Venus into the daytime sky. We again checked their original sighting of position made with reference to the edge of the observing shack and found

again that these agreed closely with the diurnal positions of Venus. As we left, Guess admitted that the object seen had most probably been Venus.

Finally, we interrogated the city and county police officers who had been alerted by radio call from Winslow. We were particularly anxious to discover whether anyone had seen the object approach from the west — the direction of the town of Darlington. No one had. Without exception all observers, questioned independently, pointed out sky positions which agreed closely with those of Venus, although they were totally unaware of this fact. Although several stated the object moved rapidly, not one placed the object in any other position in the sky than that occupied by Venus at the various times of observation.

The interrogations satisfied the investigators beyond all reasonable doubt that the positions of the object sighted over the total eight hour period were also those of the planet Venus, unless therefore, one should be willing to strain credulity and state that the mysterious object should have by coincidence occupied the sky positions of Venus over this relatively long period. One must conclude that the object observed was Venus.

One striking thing, however, is revealed by this interrogation, and that is the ease with which Venus could be seen in broad daylight. This in itself is unusual since ordinarily Venus even when at its brightest is difficult to pick out in the sky and is not at all easily pointed out to a casual observer. We must conclude that the meteorological conditions on the morning of 31 May must have been exceptional, particularly with respect to freedom from haze, to which the majority of observers attested.

FOR INTELLIGENCE OFFICER

ATIC has received a newspaper report of an unidentified flying object seen over Darlington, Wis., on or about 31 May at 0315 CST. Object was described as "enormous blue-white light like a second moon" and was observed by following persons: (1) Glen Winslow, local policeman; (2) ~~XXXXXXXXXX~~, United Press correspondent; and (3) Lawrence James, county sheriff. Object was described as lighting up the countryside. Observers stated that volunteer G.O.C. spotters in area also sighted the light. The article also states that the Air Force scrambled jets to identify the unknown. Project Blue Book requests your office investigate this sighting and submit standard AF Form 112. Suggest you investigate possibility of the objects being a very bright meteor. Another possibility would be local weather balloon flights. Request you forward winds aloft from 5 to 40,000 ft. at the date and time of sighting. How long was the object seen?

U. S. AIR FORCE TECHNICAL INFORMATION SHEET

This questionnaire has been prepared so that you can give the U. S. Air Force as much information as possible concerning the unidentified aerial phenomenon that you have observed. Please try to answer as many questions as you possibly can. The information that you give will be used for research purposes, and will be regarded as confidential material. Your name will not be used in connection with any statements, conclusions, or publications without your permission. We request this personal information so that, if it is deemed necessary, we may contact you for further details.

1. When did you see the object?

31 May 1953
Day Month Year

2. Time of day: 4 40
Hour Minutes

(Circle One): A.M. or P.M.

3. Time zone:

(Circle One): a. Eastern
b. Central
c. Mountain
d. Pacific
e. Other _____

(Circle One): a. Daylight Saving
b. Standard

4. Where were you when you saw the object?

[REDACTED] Darlington La Fayette
Nearest Postal Address City or Town State or Country

Additional remarks: _____

5. Estimate how long you saw the object. 4 20 _____
Hours Minutes Seconds

5.1 Circle one of the following to indicate how certain you are of your answer to Question 5.

a. Certain c. Not very sure
b. Fairly certain d. Just a guess

6. What was the condition of the sky?

(Circle One): a. Bright daylight d. Just a trace of daylight
b. Dull daylight e. No trace of daylight
c. Bright twilight f. Don't remember

7. IF you saw the object during DAYLIGHT, TWILIGHT, or DAWN, where was the SUN located as you looked at the object?

(Circle One): a. In front of you d. To your left
b. In back of you e. Overhead
c. To your right f. Don't remember

8. IF you saw the object at NIGHT, TWILIGHT, or DAWN, what did you notice concerning the STARS and MOON?

8.1 STARS (Circle One):

 b. A few
 c. Many
 d. Don't remember

8.2 MOON (Circle One):

- a. Bright moonlight
 b. Dull moonlight
 c. No moonlight — pitch dark
 d. Don't remember

9. Was the object brighter than the background of the sky?

(Circle One):

a. Yes

b. No

c. Don't remember

10. IF it was BRIGHTER THAN the sky background, was the brightness like that of an automobile headlight?:

(Circle One) a. A mile or more away (a distant car)?

b. Several blocks away?

c. A block away?

d. Several yards away?

e. Other _____

11. Did the object:

(Circle One for each question)

- | | | | |
|---|-----|-----------|------------|
| a. Appear to stand still at any time? | Yes | <u>No</u> | Don't Know |
| b. Suddenly speed up and rush away at any time? | Yes | <u>No</u> | Don't Know |
| c. Break up into parts or explode? | Yes | <u>No</u> | Don't Know |
| d. Give off smoke? | Yes | <u>No</u> | Don't Know |
| e. Change brightness? | Yes | <u>No</u> | Don't Know |
| f. Change shape? | Yes | <u>No</u> | Don't Know |
| g. Flicker, throb, or pulsate? | Yes | <u>No</u> | Don't Know |

12. Did the object move behind something at anytime, particularly a cloud?

(Circle One): Yes

No

Don't Know.

IF you answered YES, then tell what

it moved behind: _____

13. Did the object move in front of something at anytime, particularly a cloud?

(Circle One): Yes

No

Don't Know.

IF you answered YES, than tell what

it moved in front of: _____

14. Did the object appear: (Circle One):

a. Solid?

b. Transparent?

c. Don't Know.

15. Did you observe the object through any of the following?

- | | | | | | |
|-----------------|------------|----|----------------|-----|----|
| a. Eyeglasses | <u>Yes</u> | No | e. Binoculars | Yes | No |
| b. Sun glasses | <u>Yes</u> | No | f. Telescope | Yes | No |
| c. Windshield | <u>Yes</u> | No | g. Theodolite | Yes | No |
| d. Window glass | <u>Yes</u> | No | h. Other _____ | | |

16. Tell in a few words the following things about the object.

a. Sound no sound

b. Color Orange color light

17. Draw a picture that will show the shape of the object or objects. Label and include in your sketch any details of the object that you saw such as wings, protrusions, etc., and especially exhaust trails or vapor trails. Place an arrow beside the drawing to show the direction the object was moving.

O → EAST

18. The edges of the object were:

- (Circle One):
- a. Fuzzy or blurred
 - b. Like a bright star
 - c. Sharply outlined
 - d. Don't remember

e. Other _____

19. IF there was MORE THAN ONE object, then how many were there? one only.
Draw a picture of how they were arranged, and put an arrow to show the direction that they were traveling.

20. Draw a picture that will show the motion that the object or objects made. Place an "A" at the beginning of the path, a "B" at the end of the path, and show any changes in direction during the course.

0 ————— → EAST.

21. IF POSSIBLE, try to guess or estimate what the real size of the object was in its longest dimension.
_____ feet.

22. How large did the object or objects appear as compared with one of the following objects held in the hand and at about arm's length?

(Circle One):

- a. Head of a pin
- b. Pea
- c. Dime
- d. Nickel
- e. Quarter
- f. Half dollar

- g. Silver dollar
- h. Baseball
- i. Grapefruit
- j. Basketball
- k. Other _____

- 22.1 (Circle One of the following to indicate how certain you are of your answer to Question 22.

- a. Certain
- b. Fairly certain

- c. Not very sure
- d. Uncertain

23. How did the object or objects disappear from view? That I cannot answer

24. In order that you can give as clear a picture as possible of what you saw, we would like for you to imagine that you could construct the object that you saw. Of what type material would you make it? How large would it be, and what shape would it have? Describe in your own words a common object or objects which when placed up in the sky would give the same appearance as the object which you saw.

*It was a orange color light about size of basketball.
This is all I saw.*

25. Where were you located when you saw the object?
(Circle One):

- a. Inside a building
- b. In a car
- c. Outdoors
- d. In an airplane
- e. At sea
- f. Other _____

26. Were you (Circle One)

- a. In the business section of a city?
- b. In the residential section of a city?
- c. In open countryside?
- d. Flying near an airfield?
- e. Flying over a city?
- f. Flying over open country?
- g. Other _____

27. What were you doing at the time you saw the object, and how did you happen to notice it?

Being fishing. My cousin drew my attention to it.

28. IF you were MOVING IN AN AUTOMOBILE or other vehicle at the time, then complete the following questions:

28.1 What direction were you moving? (Circle One)

- | | | | |
|---------------------|--------------|--------------|--------------|
| a. North | c. East | e. South | g. West |
| b. <u>Northeast</u> | d. Southeast | f. Southwest | h. Northwest |

28.2 How fast were you moving? 55 miles per hour.

28.3 Did you stop at any time while you were looking at the object?

(Circle One) Yes No

29. What direction were you looking when you first saw the object? (Circle One)

- | | | | |
|--------------|----------------|--------------|--------------|
| a. North | c. <u>East</u> | e. South | g. West |
| b. Northeast | d. Southeast | f. Southwest | h. Northwest |

30. What direction were you looking when you last saw the object? (Circle One)

- | | | | |
|--------------|----------------|--------------|--------------|
| a. North | c. <u>East</u> | e. South | g. West |
| b. Northeast | d. Southeast | f. Southwest | h. Northwest |

31. If you are familiar with bearing terms (angular direction), try to estimate the number of degrees the object was from true North and also the number of degrees it was upward from the horizon (elevation).

31.1 When it first appeared:

- a. From true North 90 degrees.
- b. From horizon 70 degrees.

31.2 When it disappeared:

- a. From true North _____ degrees.
- b. From horizon _____ degrees.

32. In the following sketch, imagine that you are at the point shown. Place an "A" on the curved line to show how high the object was above the horizon (skyline) when you *first* saw it. Place a "B" on the same curved line to show how high the object was above the horizon (skyline) when you *last* saw it.

33. In the following larger sketch place an "A" at the position the object was when you *first* saw it, and a "B" at its position when you *last* saw it. Refer to smaller sketch as an example of how to complete the larger sketch.

34. What were the weather conditions at the time you saw the object?

34.1 CLOUDS (Circle One)

- a. Clear sky
- b. Hazy
- c. Scattered clouds
- d. Thick or heavy clouds
- e. Don't remember

34.2 WIND (Circle One)

- a. No wind
- b. Slight breeze
- c. Strong wind
- d. Don't remember

34.3 WEATHER (Circle One)

- a. Dry
- b. Fog, mist, or light rain
- c. Moderate or heavy rain
- d. Snow
- e. Don't remember

34.4 TEMPERATURE (Circle One)

- a. Cold
- b. Cool
- c. Warm
- d. Hot
- e. Don't remember

35. When did you report to some official that you had seen the object?

31 May 1953
Day Month Year

36. Was anyone else with you at the time you saw the object?

(Circle One) Yes No

36.1 IF you answered YES, did they see the object too?

(Circle One) Yes No

36.2 Please list their names and addresses:

[Redacted]
Darlington, Wis.

37. Was this the first time that you had seen an object or objects like this?

(Circle One) Yes No

37.1 IF you answered NO, then when, where, and under what circumstances did you see other ones?

_____.

38. In your opinion what do you think the object was and what might have caused it?

39. Do you think you can estimate the speed of the object?

(Circle One)

Yes

No

IF you answered YES, then what speed would you estimate?

_____ m.p.h.

40. Do you think you can estimate how far away from you the object was?

(Circle One)

Yes

No

IF you answered YES, then how far away would you say it was?

_____ feet.

41. Please give the following information about yourself:

NAME

_____ Last Name

_____ First Name

_____ Middle Name

ADDRESS

_____ Street

Darlington City

2 Zone

Miss. State

TELEPHONE NUMBER

What is your present job?

Truck Driving

Age

35

Sex

Male

Please indicate any special educational training that you have had.

a. Grade school 8th grade

b. High school _____

c. College _____

d. Post graduate _____

e. e. Technical school _____

(Type) _____

f. Other special training _____

U. S. AIR FORCE TECHNICAL INFORMATION SHEET

This questionnaire has been prepared so that you can give the U. S. Air Force as much information as possible concerning the unidentified aerial phenomenon that you have observed. Please try to answer as many questions as you possibly can. The information that you give will be used for research purposes, and will be regarded as confidential material. Your name will not be used in connection with any statements, conclusions, or publications without your permission. We request this personal information so that, if it is deemed necessary, we may contact you for further details.

1. When did you see the object?

31st May 1953
Day Month Year

2. Time of day:

3 45
Hour Minutes

(Circle One): A.M. or P.M.

3. Time zone:

(Circle One): a. Eastern
b. Central
c. Mountain
d. Pacific
e. Other _____

(Circle One): a. Daylight Saving
b. Standard

4. Where were you when you saw the object?

Washington
Nearest Postal Address

Washington
City or Town

Wisc
State or Country

Additional remarks: _____

5. Estimate how long you saw the object.

2 30 _____
Hours Minutes Seconds

5.1 Circle one of the following to indicate how certain you are of your answer to Question 5.

a. Certain
b. Fairly certain

c. Not very sure
d. Just a guess

6. What was the condition of the sky?

(Circle One): a. Bright daylight
b. Dull daylight
c. Bright twilight

d. Just a trace of daylight
e. No trace of daylight
f. Don't remember

Bright Moon lit and later bright Sun lit

7. IF you saw the object during DAYLIGHT, TWILIGHT, or DAWN, where was the SUN located as you looked at the object?

(Circle One): a. In front of you
b. In back of you
c. To your right

d. To your left
e. Overhead
f. Don't remember

8. IF you saw the object at NIGHT, TWILIGHT, or DAWN, what did you notice concerning the STARS and MOON?

8.1 STARS (Circle One):

- a. None
 b. A few
 c. Many
 d. Don't remember

8.2 MOON (Circle One):

- a. Bright moonlight
 b. Dull moonlight
 c. No moonlight — pitch dark
 d. Don't remember

9. Was the object brighter than the background of the sky?

(Circle One):

a. Yes

b. No

c. Don't remember

10. IF it was BRIGHTER THAN the sky background, was the brightness like that of an automobile headlight?:

(Circle One) a. A mile or more away (a distant car)?

b. Several blocks away?

c. A block away?

d. Several yards away?

e. Other

more like a dimming
although not in shape

11. Did the object:

- a. Appear to stand still at any time?
 b. Suddenly speed up and rush away at any time?
 c. Break up into parts or explode?
 d. Give off smoke?
 e. Change brightness?
 f. Change shape?
 g. Flicker, throb, or pulsate?

No
 No

16. Tell in a few words the following things about the object.

- a. Sound None
- b. Color blue-white

17. Draw a picture that will show the shape of the object or objects. Label and include in your sketch any details of the object that you saw such as wings, protrusions, etc., and especially exhaust trails or vapor trails. Place an arrow beside the drawing to show the direction the object was moving.

18. The edges of the object were:

- (Circle One):
- a. Fuzzy or blurred
 - b. Like a bright star
 - c. Sharply outlined
 - d. Don't remember

e. Other _____

19. IF there was MORE THAN ONE object, then how many were there? no

Draw a picture of how they were arranged, and put an arrow to show the direction that they were traveling.

20. Draw a picture that will show the motion that the object or objects made. Place an "A" at the beginning of the path, a "B" at the end of the path, and show any changes in direction during the course.

21. IF POSSIBLE, try to guess or estimate what the real size of the object was in its longest dimension.

_____ feet. *must be long to be seen at such a distance*

22. How large did the object or objects appear as compared with one of the following objects held in the hand and at about arm's length?

(Circle One):

- a. Head of a pin
- b. Pea
- c. Dime
- d. Nickel
- e. Quarter
- f. Half dollar

- g. Silver dollar
- h. Baseball
- i. Grapefruit
- j. Basketball
- k. Other _____

- 22.1 (Circle One of the following to indicate how certain you are of your answer to Question 22.)

- a. Certain
- b. Fairly certain

- c. Not very sure
- d. Uncertain

23. How did the object or objects disappear from view?

Could be plainly seen as I quit observing at 6:30 A.M.

24. In order that you can give as clear a picture as possible of what you saw, we would like for you to imagine that you could construct the object that you saw. Of what type material would you make it? How large would it be, and what shape would it have? Describe in your own words a common object or objects which when placed up in the sky would give the same appearance as the object which you saw.

*shape would be round
don't know what material*

25. Where were you located when you saw the object?
(Circle One):

- a. Inside a building
- b. In a car
- c. Outdoors
- d. In an airplane
- e. At sea
- f. Other _____

26. Were you (Circle One)

- a. In the business section of a city?
- b. In the residential section of a city?
- c. In open countryside?
- d. Flying near an airfield?
- e. Flying over a city?
- f. Flying over open country?
- g. Other _____

27. What were you doing at the time you saw the object, and how did you happen to notice it?

Called from Sleep by City Police
Officer

28. IF you were MOVING IN AN AUTOMOBILE or other vehicle at the time, then complete the following questions:

28.1 What direction were you moving? (Circle One)

- a. North
- b. Northeast
- c. East
- d. Southeast
- e. South
- f. Southwest
- g. West
- h. Northwest

28.2 How fast were you moving? 15 miles per hour.

28.3 Did you stop at any time while you were looking at the object?

(Circle One) Yes No

29. What direction were you looking when you first saw the object? (Circle One)

- a. North
- b. Northeast
- c. East
- d. Southeast
- e. South
- f. Southwest
- g. West
- h. Northwest

30. What direction were you looking when you last saw the object? (Circle One)

- a. North
- b. Northeast
- c. East
- d. Southeast
- e. South
- f. Southwest
- g. West
- h. Northwest

31. If you are familiar with bearing terms (angular direction), try to estimate the number of degrees the object was from true North and also the number of degrees it was upward from the horizon (elevation).

31.1 When it first appeared:

- a. From true North 80 degrees.
- b. From horizon 20 degrees.

31.2 When it disappeared:

- a. From true North _____ degrees.
- b. From horizon _____ degrees.

32. In the following sketch, imagine that you are at the point shown. Place an "A" on the curved line to show how high the object was above the horizon (skyline) when you *first* saw it. Place a "B" on the same curved line to show how high the object was above the horizon (skyline) when you *last* saw it.

33. In the following larger sketch place an "A" at the position the object was when you *first* saw it, and a "B" at its position when you *last* saw it. Refer to smaller sketch as an example of how to complete the larger sketch.

34. What were the weather conditions at the time you saw the object?

34.1 CLOUDS (Circle One)

- ☒ a. Clear sky
- b. Hazy
- c. Scattered clouds
- d. Thick or heavy clouds
- e. Don't remember

34.2 WIND (Circle One)

- ☒ a. No wind
- b. Slight breeze
- c. Strong wind
- d. Don't remember

34.3 WEATHER (Circle One)

- ☒ a. Dry
- b. Fog, mist, or light rain
- c. Moderate or heavy rain
- d. Snow
- e. Don't remember

34.4 TEMPERATURE (Circle One)

- a. Cold
- b. Cool
- ☒ c. Warm
- d. Hot
- e. Don't remember

35. When did you report to some official that you had seen the object?

31st May 1953
Day Month Year

36. Was anyone else with you at the time you saw the object?

(Circle One) ☒ Yes No

36.1 IF you answered YES, did they see the object too?

(Circle One) ☒ Yes No

36.2 Please list their names and addresses:

~~John Doe~~ Washington, Wisc.
~~John Doe~~ Washington, Wisc.

37. Was this the first time that you had seen an object or objects like this?

(Circle One) ☒ Yes No

37.1 IF you answered NO, then when, where, and under what circumstances did you see other ones?

_____.

38. In your opinion what do you think the object was and what might have caused it?

Don't know

39. Do you think you can estimate the speed of the object?

(Circle One)

Yes

No

IF you answered YES, then what speed would you estimate?

_____ m.p.h.

40. Do you think you can estimate how far away from you the object was?

(Circle One)

Yes

No

IF you answered YES, then how far away would you say it was?

_____ feet.

CODE:

DATE June 9th 1953

Was awakened by telephone at 3:35 A.M.
May 31st 1953. It was Washington Police
Officer Glen Whislow. He told me of the
object and came to my home at once in the
squad car. We watched the object from
my lawn for a few minutes and then went
to a hill south of Hurl to observe. We
were joined there by Sheriff Lawrence James.
When we first observed the object
(blue white) it was the size of a grape fruit
and became smaller as it went n. east
from Hurl. We noted how it moved
south east and then stopped again.
Last saw it at 6:30 A.M. as I had to leave
my post of observation.

U. S. AIR FORCE TECHNICAL INFORMATION SHEET

This questionnaire has been prepared so that you can give the U. S. Air Force as much information as possible concerning the unidentified aerial phenomenon that you have observed. Please try to answer as many questions as you possibly can. The information that you give will be used for research purposes, and will be regarded as confidential material. - i. Grapefruit
- j. Basketball
- k. Other _____

- 22.1 (Circle One of the following to indicate how certain you are of your answer to Question 22.

- a. Certain
- b. Fairly certain

- c. Not very sure
- d. Uncertain

23. How did the object or objects disappear from view?

slowly

24. In order that you can give as clear a picture as possible of what you saw, we would like for you to imagine that you could construct the object that you saw. Of what type material would you make it? How large would it be, and what shape would it have? Describe in your own words a common object or objects which when placed up in the sky would give the same appearance as the object which you saw.

*a bright light and white after day light.
10 foot Circle.*

25. Where were you located when you saw the object?
(Circle One):

- a. Inside a building
- b. In a car
- c. Outdoors
- d. In an airplane
- e. At sea
- f. Other _____

26. Were you (Circle One)

- a. In the business section of a city?
- b. In the residential section of a city?
- c. In open countryside?
- d. Flying near an airfield?
- e. Flying over a city?
- f. Flying over open country?
- g. Other _____

27. What were you doing at the time you saw the object, and how did you happen to notice it?

Driving Police Car on night watch

28. IF you were MOVING IN AN AUTOMOBILE or other vehicle at the time, then complete the following questions:

28.1 What direction were you moving? (Circle One)

- | | | | |
|---------------------|--------------|--------------|--------------|
| a. North | c. East | e. South | g. West |
| b. <u>Northeast</u> | d. Southeast | f. Southwest | h. Northwest |

28.2 How fast were you moving? 10 miles per hour.

28.3 Did you stop at any time while you were looking at the object?

(Circle One) Yes No

29. What direction were you looking when you first saw the object? (Circle One)

- | | | | |
|---------------------|--------------|--------------|--------------|
| a. North | c. East | e. South | g. West |
| b. <u>Northeast</u> | d. Southeast | f. Southwest | h. Northwest |

30. What direction were you looking when you last saw the object? (Circle One)

- | | | | |
|---------------------|-------------------------|--------------|--------------|
| a. North | c. East | e. South | g. West |
| b. <u>Northeast</u> | d. Southeast | f. Southwest | h. Northwest |

31. If you are familiar with bearing terms (angular direction), try to estimate the number of degrees the object was from true North and also the number of degrees it was upward from the horizon (elevation).

31.1 When it first appeared:

- a. From true North 20 degrees.
- b. From horizon 40 degrees.

31.2 When it disappeared:

- a. From true North 135 degrees.
- b. From horizon 45 degrees.

32. In the following sketch, imagine that you are at the point shown. Place an "A" on the curved line to show how high the object was above the horizon (skyline) when you *first* saw it. Place a "B" on the same curved line to show how high the object was above the horizon (skyline) when you *last* saw it.

33. In the following larger sketch place an "A" at the position the object was when you *first* saw it, and a "B" at its position when you *last* saw it. Refer to smaller sketch as an example of how to complete the larger sketch.

34. What were the weather conditions at the time you saw the object?

34.1 CLOUDS (Circle One)

- a. Clear sky
- b. Hazy
- c. Scattered clouds
- d. Thick or heavy clouds
- e. Don't remember

34.2 WIND (Circle One)

- a. No wind
- b. Slight breeze
- c. Strong wind
- d. Don't remember

34.3 WEATHER (Circle One)

- a. Dry
- b. Fog, mist, or light rain
- c. Moderate or heavy rain
- d. Snow
- e. Don't remember

34.4 TEMPERATURE (Circle One)

- a. Cold
- b. Cool
- c. Warm
- d. Hot
- e. Don't remember

35. When did you report to some official that you had seen the object?

31 May 1953
Day Month Year

36. Was anyone else with you at the time you saw the object?

(Circle One) Yes ~~No~~

36.1 IF you answered YES, did they see the object too?

(Circle One) Yes No

36.2 Please list their names and addresses:

~~_____~~
Shiriff
~~_____~~

37. Was this the first time that you had seen an object or objects like this?

(Circle One) Yes No

37.1 IF you answered NO, then when, where, and under what circumstances did you see other ones?

_____.

38. In your opinion what do you think the object was and what might have caused it?

Weather Balloon

39. Do you think you can estimate the speed of the object?

(Circle One)

Yes

No

IF you answered YES, then what speed would you estimate?

Gen 100 m.p.h.

40. Do you think you can estimate how far away from you the object was?

(Circle One)

Yes

No

IF you answered YES, then how far away would you say it was?

10,000 feet.

U. S. AIR FORCE TECHNICAL INFORMATION SHEET

This questionnaire has been prepared so that you can give the U. S. Air Force as much information as possible concerning the unidentified aerial phenomenon that you have observed. Please try to answer as many questions as you possibly can. The information that you give will be used for research purposes, and will be regarded as confidential material. Your name will not be used in connection with any statements, conclusions, or publications without your permission. We request this personal information so that, if it is deemed necessary, we may contact you for further details.

1. When did you see the object?

Sunday May 1953
Day Month Year

2. Time of day:

4 15
Hour Minutes

(Circle One): A.M. or P.M.

3. Time zone:

(Circle One): a. Eastern

b. Central

c. Mountain

d. Pacific

e. Other _____

(Circle One): a. Daylight Saving

b. Standard

4. Where were you when you saw the object?

DARLINGTON DARLINGTON WISCONSIN
Nearest Postal Address City or Town State or Country

Additional remarks: 100' OUTSIDE CITY LIMITS ON
CENTER HILL

5. Estimate how long you saw the object.

5 45 _____
Hours Minutes Seconds

5.1 Circle one of the following to indicate how certain you are of your answer to Question 5.

a. Certain

b. Fairly certain

c. Not very sure

d. Just a guess

6. What was the condition of the sky?

(Circle One): - a. Bright daylight

b. Dull daylight

c. Bright twilight

d. Just a trace of daylight

e. No trace of daylight

f. Don't remember

7. IF you saw the object during DAYLIGHT, TWILIGHT, or DAWN, where was the SUN located as you looked at the object?

(Circle One): a. In front of you

b. In back of you

c. To your right

d. To your left

e. Overhead

f. Don't remember

8. IF you saw the object at NIGHT, TWILIGHT, or DAWN, what did you notice concerning the STARS and MOON?

8.1 STARS (Circle One):

- a. None
 b. A few
 c. Many
 d. Don't remember

8.2 MOON (Circle One):

- a. Bright moonlight
 b. Dull moonlight
 - c. No moonlight — pitch dark
 d. Don't remember

9. Was the object brighter than the background of the sky?

(Circle One):

a. Yes

b. No

c. Don't remember

10. IF it was BRIGHTER THAN the sky background, was the brightness like that of an automobile headlight?:

(Circle One) a. A mile or more away (a distant car)?

b. Several blocks away?

c. A block away?

d. Several yards away?

e. Other BRIGHT Shining Object

11. Did the object:

(Circle One for each question)

- | | | | |
|---|------------|-----------|------------|
| a. Appear to stand still at any time? | Yes | <u>No</u> | Don't Know |
| b. Suddenly speed up and rush away at any time? | <u>Yes</u> | No | Don't Know |
| c. Break up into parts or explode? | Yes | <u>No</u> | Don't Know |
| d. Give off smoke? | Yes | <u>No</u> | Don't Know |
| e. Change brightness? | Yes | <u>No</u> | Don't Know |
| f. Change shape? | Yes | <u>No</u> | Don't Know |
| g. Flicker, throb, or pulsate? | Yes | <u>No</u> | Don't Know |

12. Did the object move behind something at anytime, particularly a cloud?

(Circle One):

Yes

No

Don't Know.

IF you answered YES, then tell what

it moved behind: _____

13. Did the object move in front of something at anytime, particularly a cloud?

(Circle One):

Yes

No

Don't Know.

IF you answered YES, than tell what

it moved in front of: _____

14. Did the object appear: (Circle One):

a. Solid?

b. Transparent?

c. Don't Know.

15. Did you observe the object through any of the following?

- | | | | | | |
|-----------------|------------|-----------|----------------|-----|-----------|
| a. Eyeglasses | Yes | <u>No</u> | e. Binoculars | Yes | <u>No</u> |
| b. Sun glasses | Yes | <u>No</u> | f. Telescope | Yes | <u>No</u> |
| c. Windshield | <u>Yes</u> | No | g. Theodolite | Yes | <u>No</u> |
| d. Window glass | <u>Yes</u> | No | h. Other _____ | | |

16. Tell in a few words the following things about the object.

- a. Sound NONE
- b. Color BRIGHT BLUE-White (like Arc welding light)

17. Draw a picture that will show the shape of the object or objects. Label and include in your sketch any details of the object that you saw such as wings, protrusions, etc., and especially exhaust trails or vapor trails. Place an arrow beside the drawing to show the direction the object was moving.

came from North West traveled
to South East -

18. The edges of the object were:

- (Circle One): a. Fuzzy or blurred
b. Like a bright star
c. Sharply outlined
d. Don't remember

e. Other _____

19. IF there was MORE THAN ONE object, then how many were there? Only one
Draw a picture of how they were arranged, and put an arrow to show the direction that they were traveling.

20. Draw a picture that will show the motion that the object or objects made. Place an "A" at the beginning of the path, a "B" at the end of the path, and show any changes in direction during the course.

No change of direction

21. IF POSSIBLE, try to guess or estimate what the real size of the object was in its longest dimension.

3 ft diameter at 10000 feet.

22. How large did the object or objects appear as compared with one of the following objects held in the hand and at about arm's length?

(Circle One):

- a. Head of a pin
- b. Pea
- c. Dime
- d. Nickel
- e. Quarter
- f. Half dollar

- g. Silver dollar
- h. Baseball
- i. Grapefruit
- j. Basketball
- k. Other

Larger than any of above

- 22.1 (Circle One of the following to indicate how certain you are of your answer to Question 22.

a. Certain

b. Fairly certain

c. Not very sure

d. Uncertain

23. How did the object or objects disappear from view? *did not observe*
after 10 am.

24. In order that you can give as clear a picture as possible of what you saw, we would like for you to imagine that you could construct the object that you saw. Of what type material would you make it? How large would it be, and what shape would it have? Describe in your own words a common object or objects which when placed up in the sky would give the same appearance as the object which you saw.

Round glowing object

25. Where were you located when you saw the object?
(Circle One):

- a. Inside a building
- b. In a car
- c. Outdoors
- d. In an airplane
- e. At sea
- f. Other _____

26. Were you (Circle One)

- a. In the business section of a city?
- b. In the residential section of a city?
- c. In open countryside?
- d. Flying near an airfield?
- e. Flying over a city?
- f. Flying over open country?
- g. Other _____

27. What were you doing at the time you saw the object, and how did you happen to notice it?

Starting on fishing trip - City Police
notified me.

28. IF you were MOVING IN AN AUTOMOBILE or other vehicle at the time, then complete the following questions:

28.1 What direction were you moving? (Circle One)

- a. North
- b. Northeast
- c. East
- d. Southeast
- e. South
- f. Southwest
- g. West
- h. Northwest

28.2 How fast were you moving? 25-30 miles per hour.

28.3 Did you stop at any time while you were looking at the object?

(Circle One) Yes No

29. What direction were you looking when you first saw the object? (Circle One)

- a. North
- b. Northeast
- c. East
- d. Southeast
- e. South
- f. Southwest
- g. West
- h. Northwest

30. What direction were you looking when you last saw the object? (Circle One)

- a. North
- b. Northeast
- c. East
- d. Southeast
- e. South
- f. Southwest
- g. West
- h. Northwest

31. If you are familiar with bearing terms (angular direction), try to estimate the number of degrees the object was from true North and also the number of degrees it was upward from the horizon (elevation).

31.1 When it first appeared:

- a. From true North 30° degrees.
- b. From horizon 70 degrees.

31.2 When it disappeared:

- a. From true North 150 degrees.
- b. From horizon 2 degrees.

32. In the following sketch, imagine that you are at the point shown. Place an "A" on the curved line to show how high the object was above the horizon (skyline) when you *first* saw it. Place a "B" on the same curved line to show how high the object was above the horizon (skyline) when you *last* saw it.

25-30000

33. In the following larger sketch place an "A" at the position the object was when you *first* saw it, and a "B" at its position when you *last* saw it. Refer to smaller sketch as an example of how to complete the larger sketch.

34. What were the weather conditions at the time you saw the object?

34.1 CLOUDS (Circle One)

- ☒ a. Clear sky
- b. Hazy
- c. Scattered clouds
- d. Thick or heavy clouds
- e. Don't remember

34.2 WIND (Circle One)

- a. No wind
- ☒ b. Slight breeze
- c. Strong wind
- d. Don't remember

34.3 WEATHER (Circle One)

- ☒ a. Dry
- b. Fog, mist, or light rain
- c. Moderate or heavy rain

Darlington, Wisconsin

31 May 1953

I. DESCRIPTION

Between 0320 CST and 1130 CST on 31 May 1953, eleven persons in the Darlington-Monroe area in Wisconsin sighted an unidentified aerial object. The object appeared as a steady white light coming generally out of the East and disappearing high overhead after 8 hours of continuous observation. It appeared low on the Eastern horizon, much brighter than the surrounding stars. It was reported to hover and then move at terrific speeds by several local inhabitants, including several county sheriffs and Ground Observer Corps members. Two of the policemen pursued the object in their squad car without gaining any noticeable ground. A telescope was employed to view the phenomena by the GOC members. The weather during the time of sighting was unusually clear with a few scattered clouds carried on a north heading by the wind.

II. DISCUSSION

A newspaper account of the sighting came to the attention of ATIC and as a result an officer and an astronomer were sent to the area of the sighting. **(L. Olson)** **(Dr. A. J. Hynek)** They interrogated eight of the eleven observers in attempting to piece together the variety of reports. Estimates of azimuth and elevation readings were obtained from different observers at varied locations in Monroe and Darlington for evenly spaced time intervals during the 8 hour period. The description of the object turned out to be the same with all observers - bright white. The description of the maneuvers varied, however, some stating the object rose slowly, others saying it moved at great speeds, and then hovered. The latter description usually came from observers while riding in a car. All agreed that the object was too bright to be a star and moreover it was seen in the daytime.

It was determined that the path of the object in question across the sky, its position at appearance and disappearance, very closely paralleled the path of the planet Venus on 31 May 1953. Venus on this day rose at 0310 CST and was at its approximate maximum brilliancy. Under ideal weather conditions it can be seen in the daytime, although this is rare. The fact that GOC personnel first sighted it at night and had the object pin-pointed for daylight observation allowed them to keep it under constant surveillance. Reports that the object maneuvered radically usually came from persons driving in cars while observing the object. If Venus is stared at for any length of time without any balancing reference point, it can appear to perform erratic maneuvers.

GOC personnel alerted the Chicago filter center and jets were scrambled to investigate. This was during daylight observation and the jets, although vectored toward the object by visual directions from Darlington, were unable to locate the unknown.

PROJECT 10073 WORKSHEET

I. GENERAL

1. DATE <i>31 May 1953</i>	2. LOCATION <i>DARLINGTON - MONROE, WISC.</i>	3. TIME Local: <i>08:00</i> Zebra: <i>1420</i>
4. WAS OBJECT OBSERVED FROM THE GROUND? ☒ Yes ☐ No		
☒ Naked Eye ☐ Binoculars ☒ Telescope ☐ Theodolite		
5. WAS OBJECT OBSERVED BY GROUND RADAR? ☐ Yes ☒ No		
☐ By One Set ☐ By Two Sets ☐ By Three Sets		
6. WAS OBJECT OBSERVED FROM THE AIR? ☐ Yes ☒ No		
☐ A/C Observed Object ☐ Interception Attempted ☐ No Intercept Attempted		
7. WERE AIRCRAFT SCRAMBLED TO INTERCEPT? ☒ Yes ☐ No		
☒ A/C Scrambled ☐ Visual Contact Made ☐ A/I Contact Made ☐ No Contact Made		
8. DID OBJECT CHANGE DIRECTION AT ANY TIME? ☒ Yes ☐ No		
☐ Normal ☐ Violent		
9. IF OBJECT WAS A "LIGHT", WAS IT: ☐ Blinking ☒ Steady		
10. LENGTH OF TIME IN SIGHT: ☐ 1-15 Seconds ☐ 1-5 Minutes ☒ Over 10 Minutes <i>8 hrs</i>		
11. REPORTING AGENCY (Unit Number and Mailing Address) <i>Darlington, Wisc. G.O.C. - Towne AFB, Madison, Wisc.</i>		

II. ASTRONOMICAL DATA

12. WHAT ASTRONOMICAL ACTIVITY WAS NOTED? <i>No</i>		
13. DID OBJECT APPEAR TO ARCH DOWNWARD?	☐ Yes	☐ No
14. DID OBJECT HAVE A TAIL?	☐ Yes	☐ No
15. DID OBJECT APPEAR TO DISINTEGRATE?	☐ Yes	☐ No
16. TIME OF SIGHTING RELATIVE TO SUNRISE OR SUNSET (Data From Air Almanac)		
☒ Night ☐ Day ☐ Sunrise ☐ Sunset		

III. AIRCRAFT DATA

17. WERE AIRCRAFT NOTED IN AREA?	☐ Yes	☒ No
☐ One Aircraft ☐ More Than One Aircraft		
18. WAS ANY SOUND HEARD?	☐ Yes	☐ No
19. WERE THERE INDICATIONS OF HIGH BACKGROUND NOISE?	☐ Yes	☐ No
20. WAS THE OBJECT VIEWED ABOVE 45° ELEVATION?	☒ Yes	☐ No

IV. BALLOON DATA

21. WERE BALLOONS RELEASED IN AREA?		☒ Yes		☐ No		
22. TIME SINCE SCHEDULED BALLOON RELEASE:		30 Minutes

V. EVALUATION

21. EVALUATION OF SOURCE:		22. DETAILS OF REPORT:	
☐ Excellent ☐ Good ☒ Fair ☐ Poor ☐ Unreliable ☐ Extremely Doubtful ☐ Hoax		☒ Good ☐ Fair ☐ Poor ☐ Insufficient to Evaluate	
23. FINAL EVALUATION:			
☐ Was Balloon ☐ Probably Balloon ☐ Possibly Balloon ☐ Was Aircraft ☐ Probably Aircraft ☐ Possibly Aircraft		☒ Was Astronomical ☐ Probably Astronomical ☐ Possibly Astronomical ☐ Other: _____ ☐ Insufficient Data For Evaluation ☐ Unknown	
24. COMMENTS:			
Contract Astronomer and H. R. M. Osborn made T.O.V. trip to Washington to investigate sighting. Interviewed 8 out of 11 observers and found that what they were observing was without a doubt Venus. Experience level of sources was rather low with the exception of an amateur astronomer (Mr. Burr). Shows all would not believe it was Venus, even when shown Venus in the early morning hours. R. Osborn
