Reference your FLYCRIPT OC20-2T-7-10-2 reporting one round, white, shiny object sighted 082227Z. ATIC requests wire answer to the following questions: 1) What were the estimated azimuth and elevation readings of the unidentified object sighting by Mr. Jarrett; and the azimuth and elevation readings of the balloon sighted by civilian and military observers through binoculars at 2350Z? ATIC attempting to establish that both sightings were of the same object - the balloon. 2) Did the 33rd AD report any radar contact in the area at the time of sighting?

ATIC has received three sightings of unidentified objects from you recently. Suggest you contact Lt Kenneth Knopp, Intelligence Officer, 33rd AD. He would be able to brief Tinker tower personnel, weather personnel, and civilian guards on unidentified flying objects. ATIC believes 8 July sighting was of a balloon, possibility of the two preceding sightings also being weather balloons.

BALLOON BY 6th Wm - 2100 Z
 SIGHTING AT - 2227 Z
 BALLOON NOTICED BY TOWER - 2350 Z

If the sighting was of 6th's radar which balloon, this ball. would have been at 87,000 ft. - it seems improbable that even a balloon up 9 ft. Radar would could be seen at this height.

The balloon noticed by Tower - if released at 2100Z would be at approx. 117,000 ft. Too high to be the 2100 Z sampling.

Note:

USCIB Weather Bureau released a pilot at 2100 Z according to B.B. records.
