

PROJECT 10073 RECORD CARD

1. DATE 12 August 1958		2. LOCATION Cleveland, Ohio		12. CONCLUSIONS ☐ Was Balloon ☐ Probably Balloon ☐ Possibly Balloon ☐ Was Aircraft ☐ Probably Aircraft ☐ Possibly Aircraft	
3. DATE-TIME GROUP Local 9:22 P.M. GMT 13/0222Z		4. TYPE OF OBSERVATION ☒ Ground-Visual ☐ Ground-Radar ☐ Air-Visual ☐ Air-Intercept Radar		☒ Was Astronomical Meteor ☐ Probably Astronomical ☐ Possibly Astronomical	
5. PHOTOS ☐ Yes ☒ No		6. SOURCE Civilian		☐ Other ☐ Insufficient Data for Evaluation ☐ Unknown	
7. LENGTH OF OBSERVATION 17 secs		8. NUMBER OF OBJECTS one		9. COURSE East	
10. BRIEF SUMMARY OF SIGHTING Medium red obj, near perfect circle, edges sharply outlined, had a steady movement fm West to East, size of dime.				11. COMMENTS Meteor Sighting.

(PM)

③

Time zone

② Eastern Standard

① Daylight Savings Time

④

Reported place at seeing object (U.S.A.)

Home

[REDACTED]

② Low level (2) Miles

⑤

An estimate of length of sighting was

③ approximately 17, seven to ten seconds

2- or -3 seconds either way

I gave the object an approximate assessment.

⑥

Conditions of sky

(It (the sky) was dark.

⑦

⑧

Did not see object at daylight, twilight,

or dawn. The sky was dark.

⑨

I saw the object at night

8.1. Stars were many. ①

8.2. Bright Moonlight ②

⑩

Background of the sky to the object

brightness

② Yes.

⑪

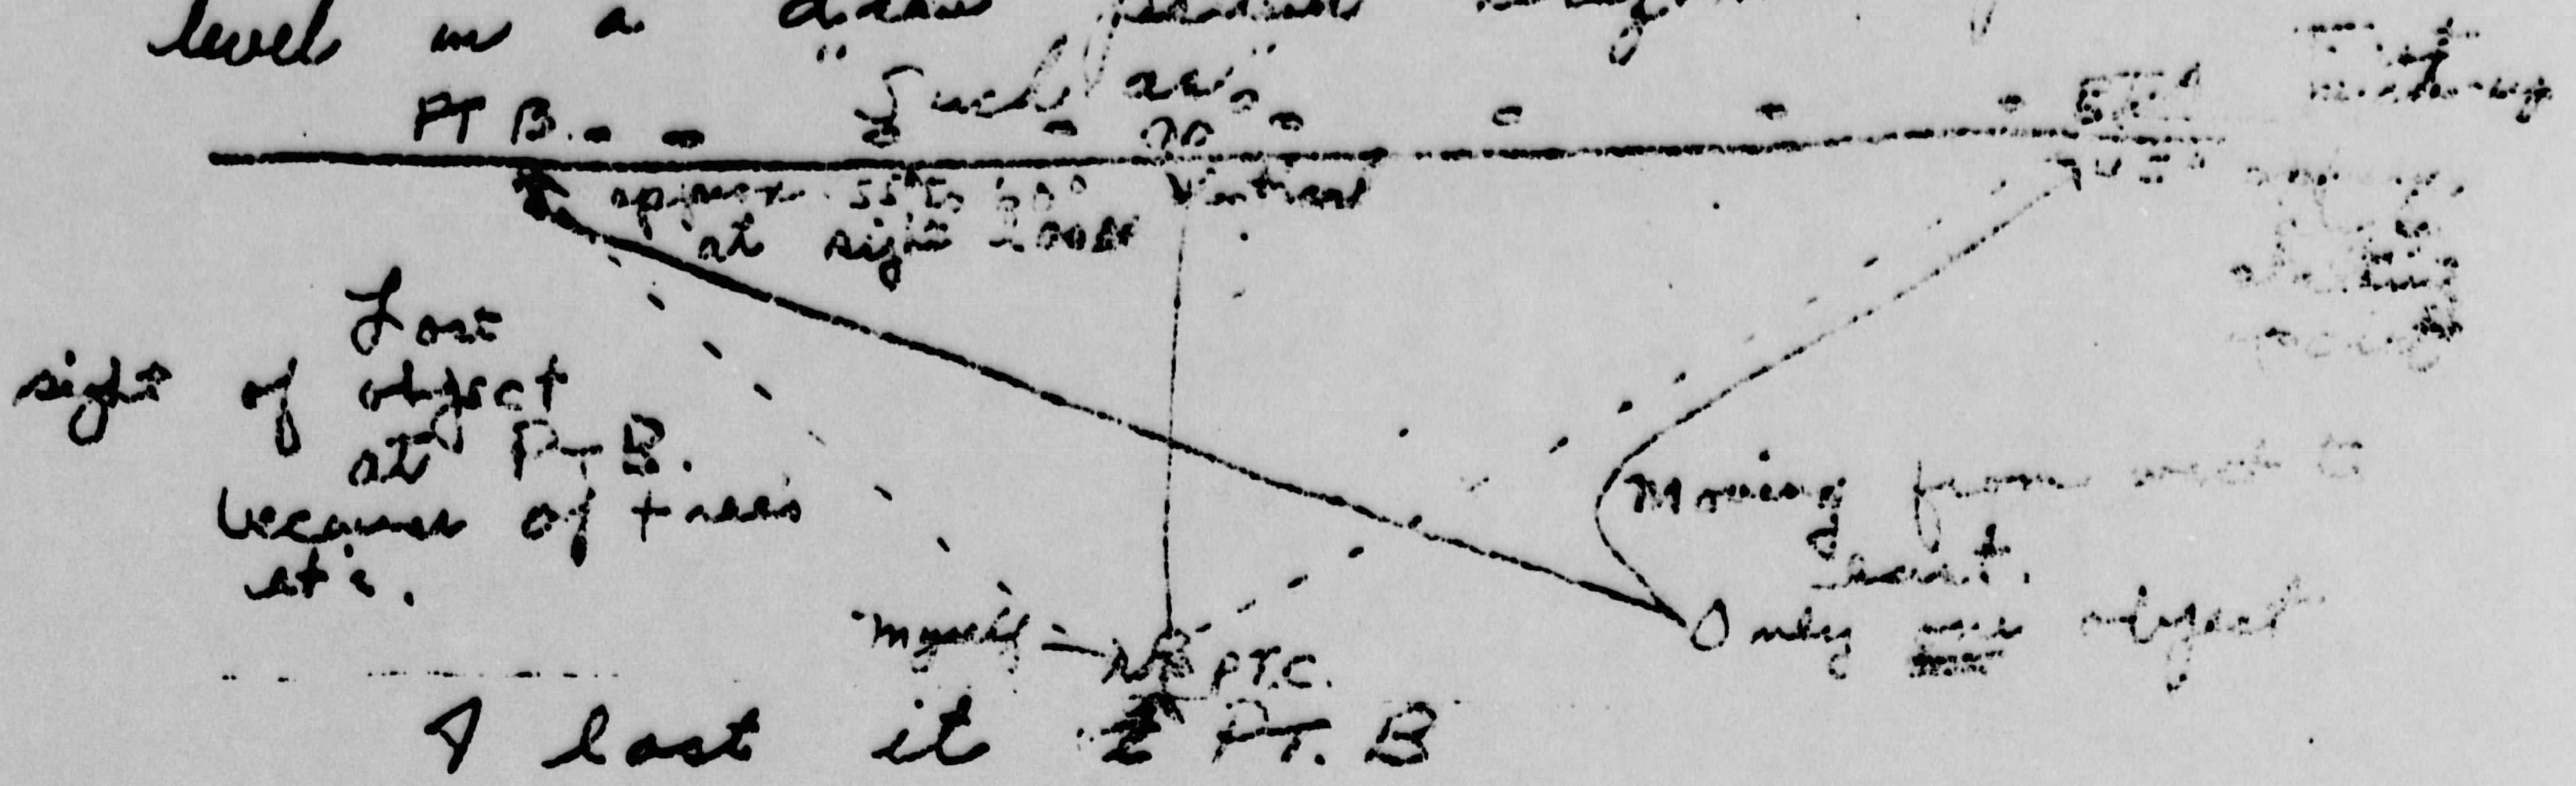

The answer to #10 question is that the object

was not the brightness of any of the four parts,

It was more
(like the brightness of a sun-setting glow.

12. The object never moved behind anything else.

It was a bell-clear night and the object moved
level in a "draw" pattern horizontal plane.

11 Did the object:

- | | | |
|---|-----|------|
| a. appear to stand still at any time? | Yes | (No) |
| b. suddenly speed up and rush away at any time? | Yes | (No) |
| c. Break up into parts or explode? | Yes | (No) |
| d. Give off smoke? | Yes | (No) |
| e. Change brightness? | Yes | (No) |
| f. Change shape? | Yes | (No) |
| g. Flicker, throb, or pulsate? | Yes | (No) |

(The object, as stated, in question 10, did not change in any way, up, or down, stop, or go; It moved at a steady pace of motion, or speed, as if being "drawn," liken to a magnetic field of force, horizontally.

12 Did the object move in front of something at any time, particularly a cloud?

Ans. (No) (The sky was bell-clear.)

13 Did the object move in front of anything

Ans. (No)

14 Did the object appear:

(a) started

(continued)

④ Did you observe the object through any of the following?

Ans. Not with any of these.

Just with the naked eye.

The only background was the stars.

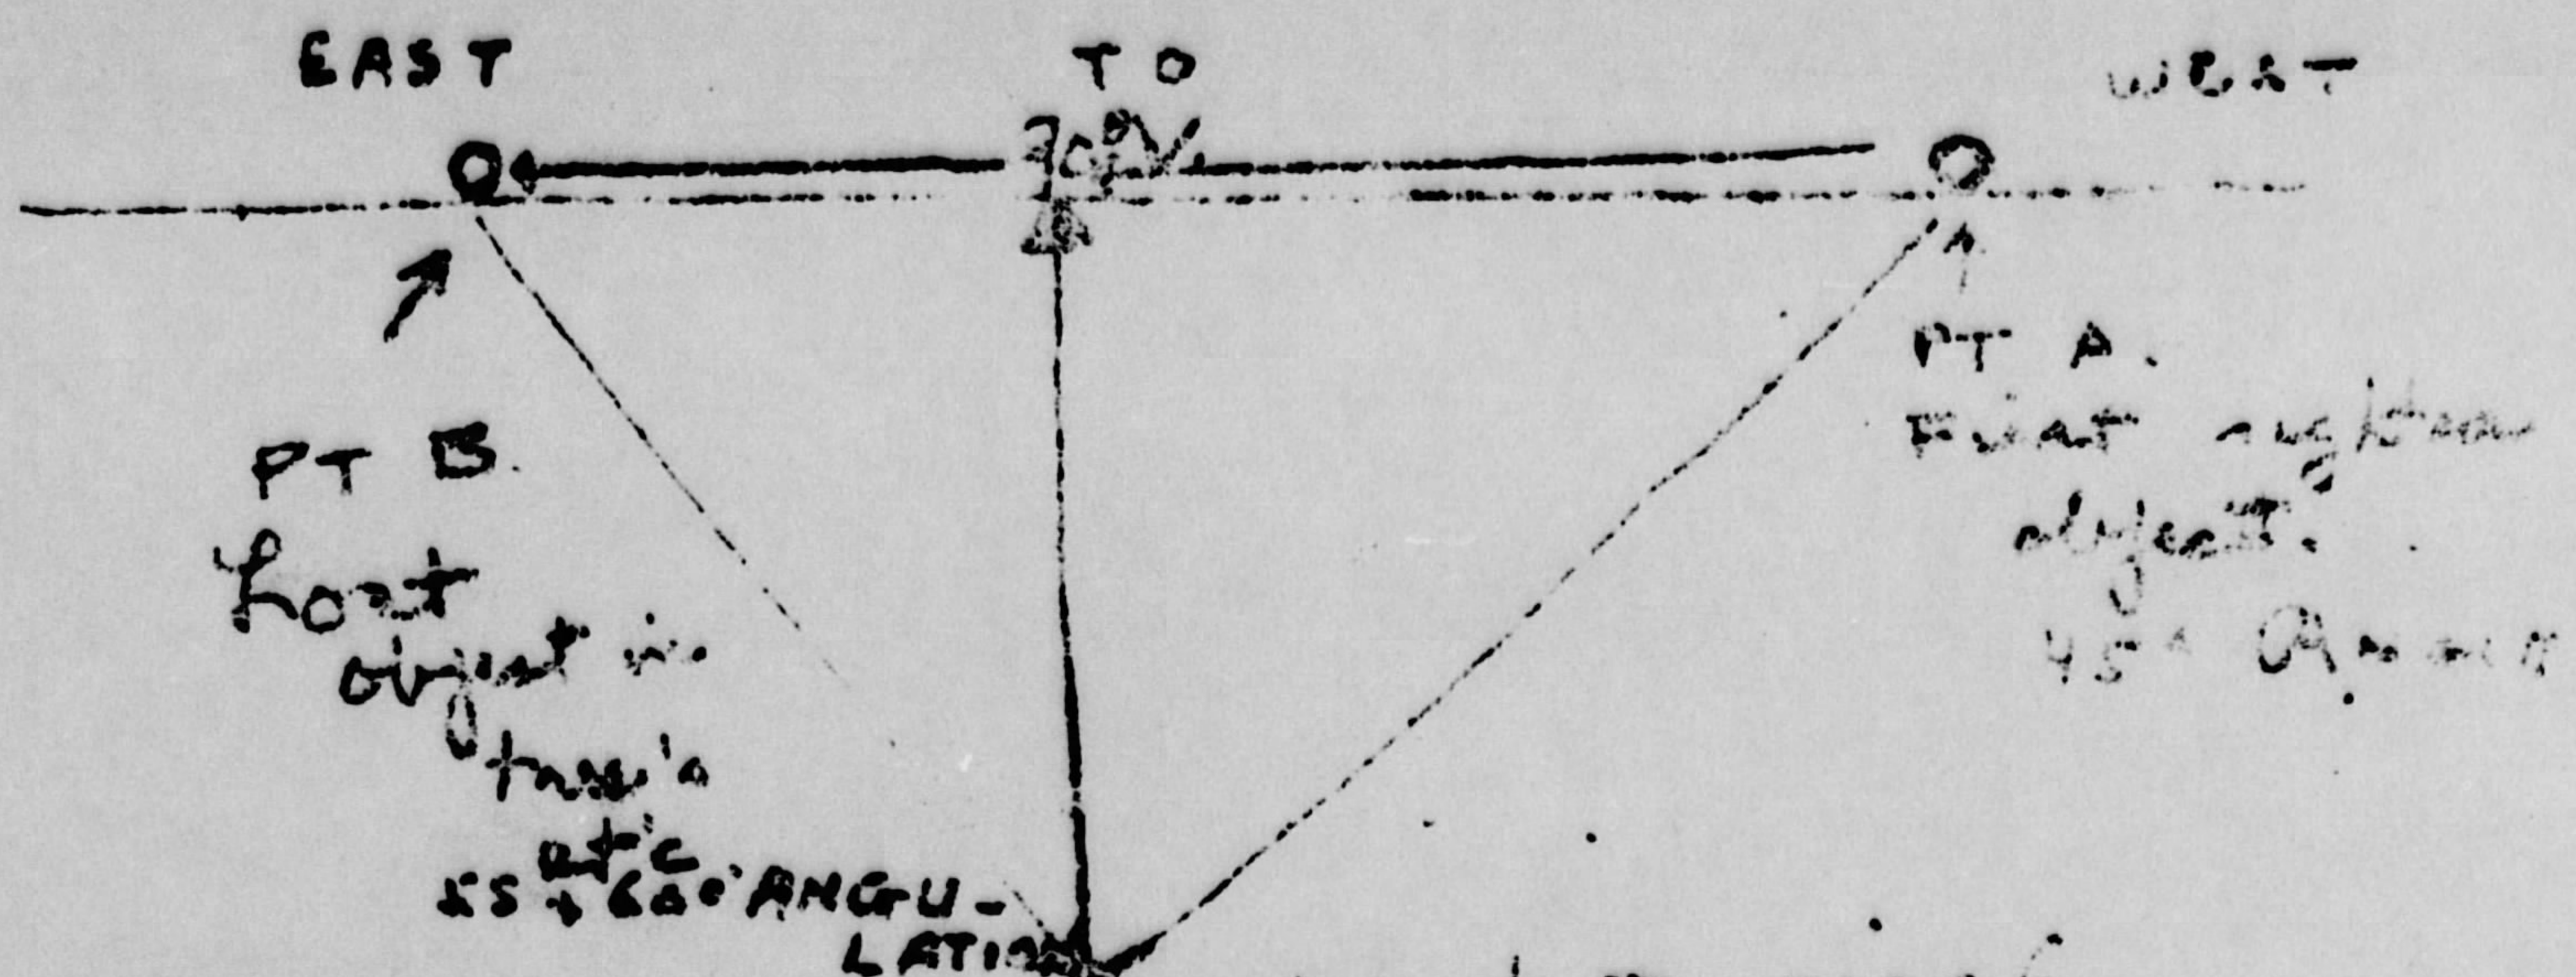

⑤ Tell in a few words the following things about the object.

a. Sound. There was no sound.

b. Color. The color was red.

red at all times & there the sighting.

⑦

The object was a near perfect circle
I believe I saw it as a bottom when I looked up.

There were no exhaust or vapors + rails.

No wings, or protrusions, etc, just a globular red circle object.

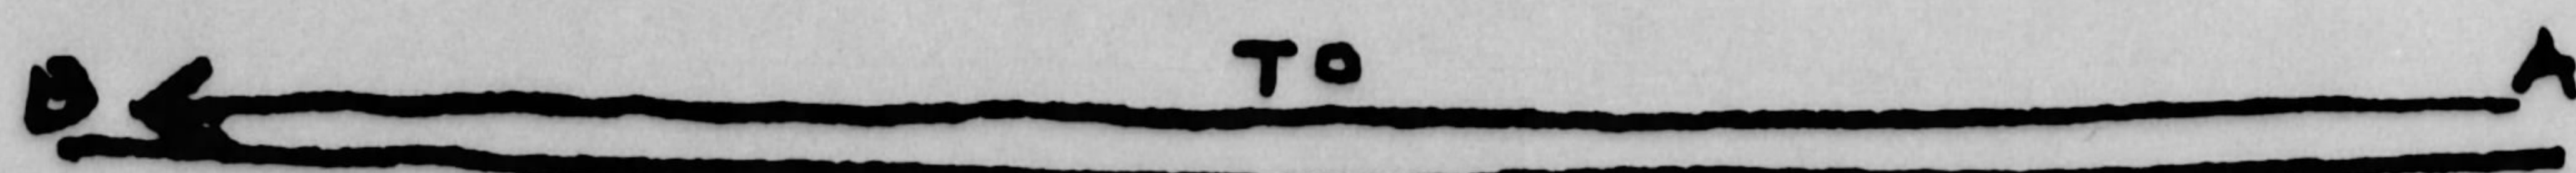

⑧ The edges of the object were

③ sharply outlined

19. There was of only one object.

⑨

(over) The motion the object made was akin to a horizontal "draw" motion swiftly yet constantly moving such as in a controlled manner. Horizontal field of

21. The object was smaller in dimension.
As for the length of the object, being round in
dimension, I could not say.

22. © dime

(I had a penny in my pocket and knowing
of the arms length experiment, I held up
the penny and it covered the area of the
object.

22.1 (answer to Question 22

② Certain.

23. How did the object disappear from view?

Ans. The neighboring trees, etc, obstructed
my view.

Also - The object came from the west on
a straight parallel horizontal line of
motion and left my view to the east
in the same manner.

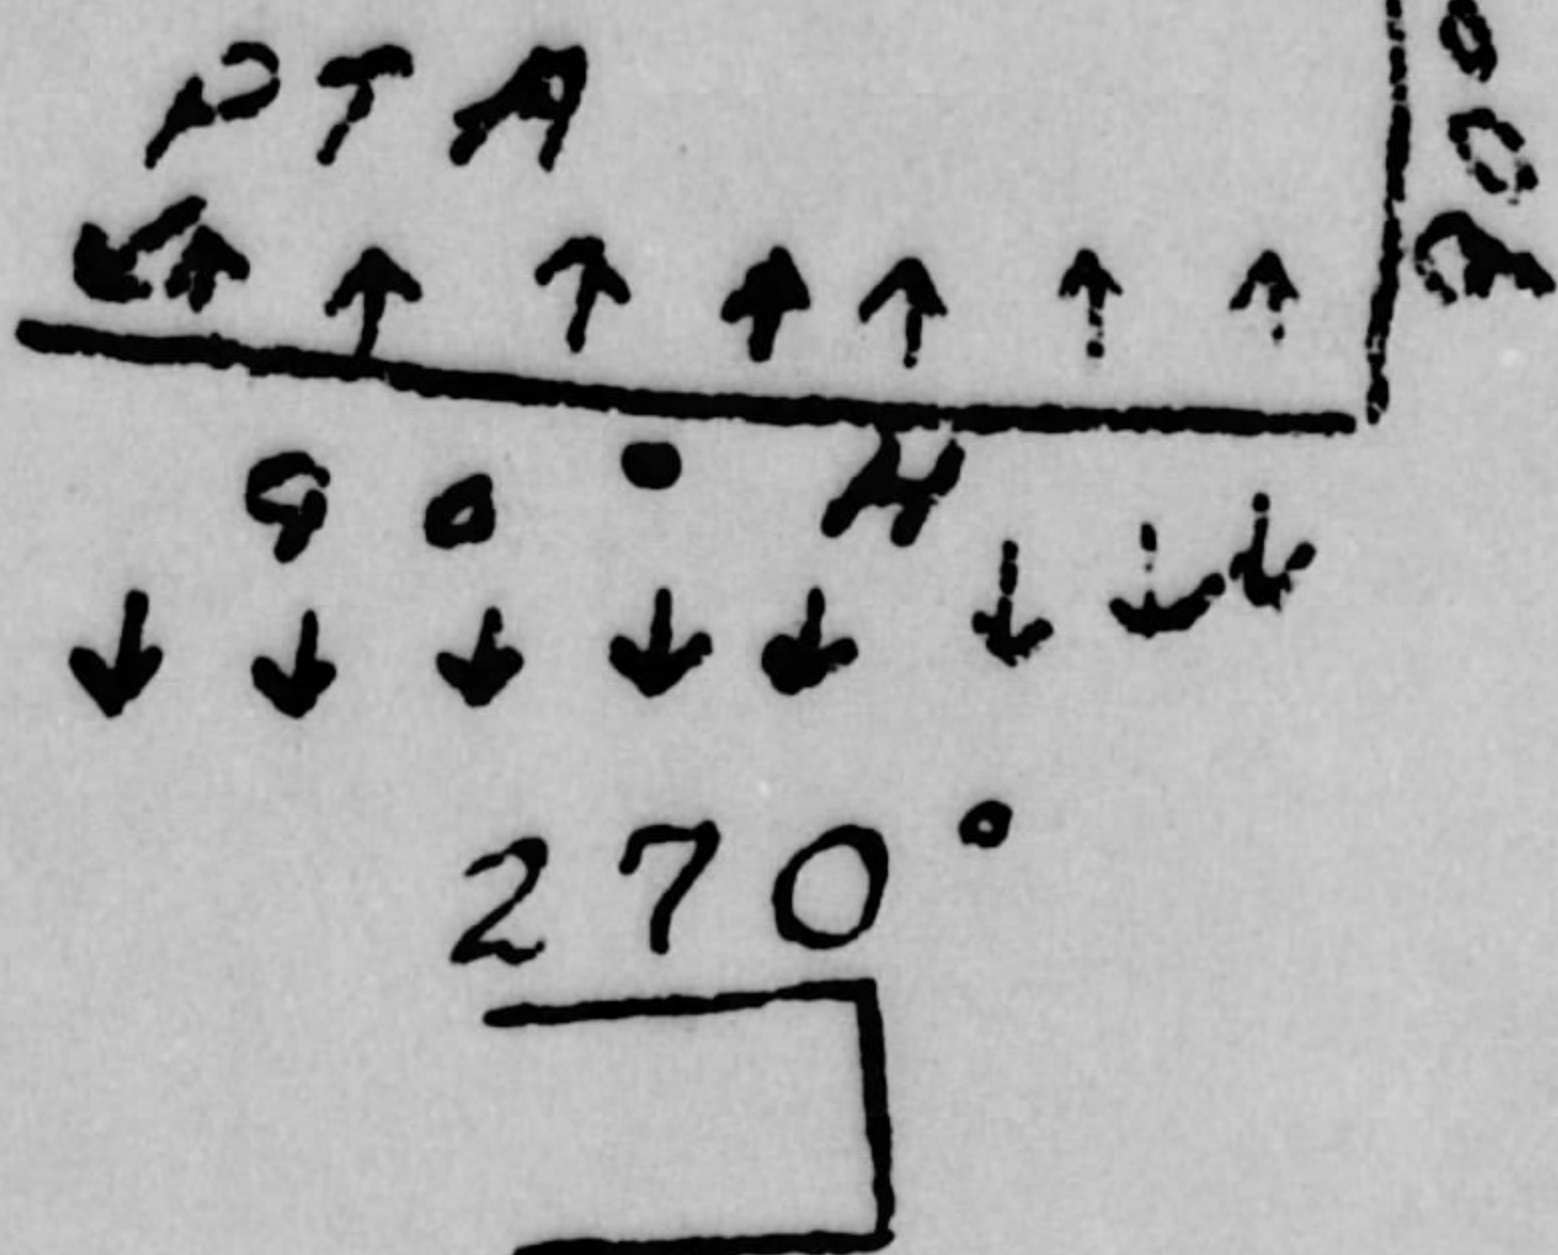

24. This is a hypothetical question obviously
to view as many facts of the disc as possible,
but, I'll give my view for what it's worth.
To start with my theory as the flying saucer
is this:

I have believed, for years, that it is composed,
or "made" of a flexible, non-metallic
material which gives a "clay" of shape to the
object thru its mode of travel, which I think,
is a force field; that to be exact, an electro-magnetic
field. Of force, I think, I am not sure, but "field".

that bring the "travel" or "motion" of the waves
 into direct degree lines of "motion." I believe
 there is a "give" in its body when transitioning
 from a horizontal to a vertical magnetic field.
 Being as we know its electro-magnetism
 is 270°, therefore why can't there be an "ahead"
 el.-magn. field in front, back, and side of
 the sancer at all times, thus creating a
 line or lines of elec.-magnetic "constantcy."

As such diagrammed below:

PT.C ↑ ↑ 90° H ↑ ↑ PT.B

- (PT.A.) Would evolve at say, 15%
 of electro-magnetic "constantcy."
- (PT.B.) Would evolve at say, 40%
 of electro-magnetic "constantcy."
- (PT.C.) Would evolve at say,
 80% of "constantcy."

Also the side-way "motion," or
 travel could be either from
 within, or without, as the field
 of force is lengthened, or shortened.

Of course, concerning the shape of the object
 it would be of a circular nature,
 such as the circular pattern makeup of
 our universe and space beyond of our
 universe. The "Rev." is follow a pattern of constantcy.

of w.f.o. in relationship to the pattern and construction of our universe and space beyond. A circular pattern. The size of the object is not important. It could be any size.

(25) Where were you located when you saw the object? (C) Out doors

(26) (3) Residential section of the city.

(27) I was waiting to view the moon come from the Russian Sputniks, which appeared previously, the last 5 nights in Cleveland's area. I was scanning the sky to the North-Northwest when turning my head North-west-West I caught a glimpse of this object, and follow it, which was about 3-5' from directly overhead until it disappeared from view to the east, and lost in the natural surroundings, trees, etc.

(28) Answer to #28 question.

I was not in an automobile

(29) What direction were you looking when you first saw the object? Answer (G) West

③① What direction were you looking when you last saw the object? Answer ☒ East

③①.1. ^{Appearance} ☒ not sure

☒ 45° from western horizon, moving west.

(I did not see it instantaneously)

③①.2.

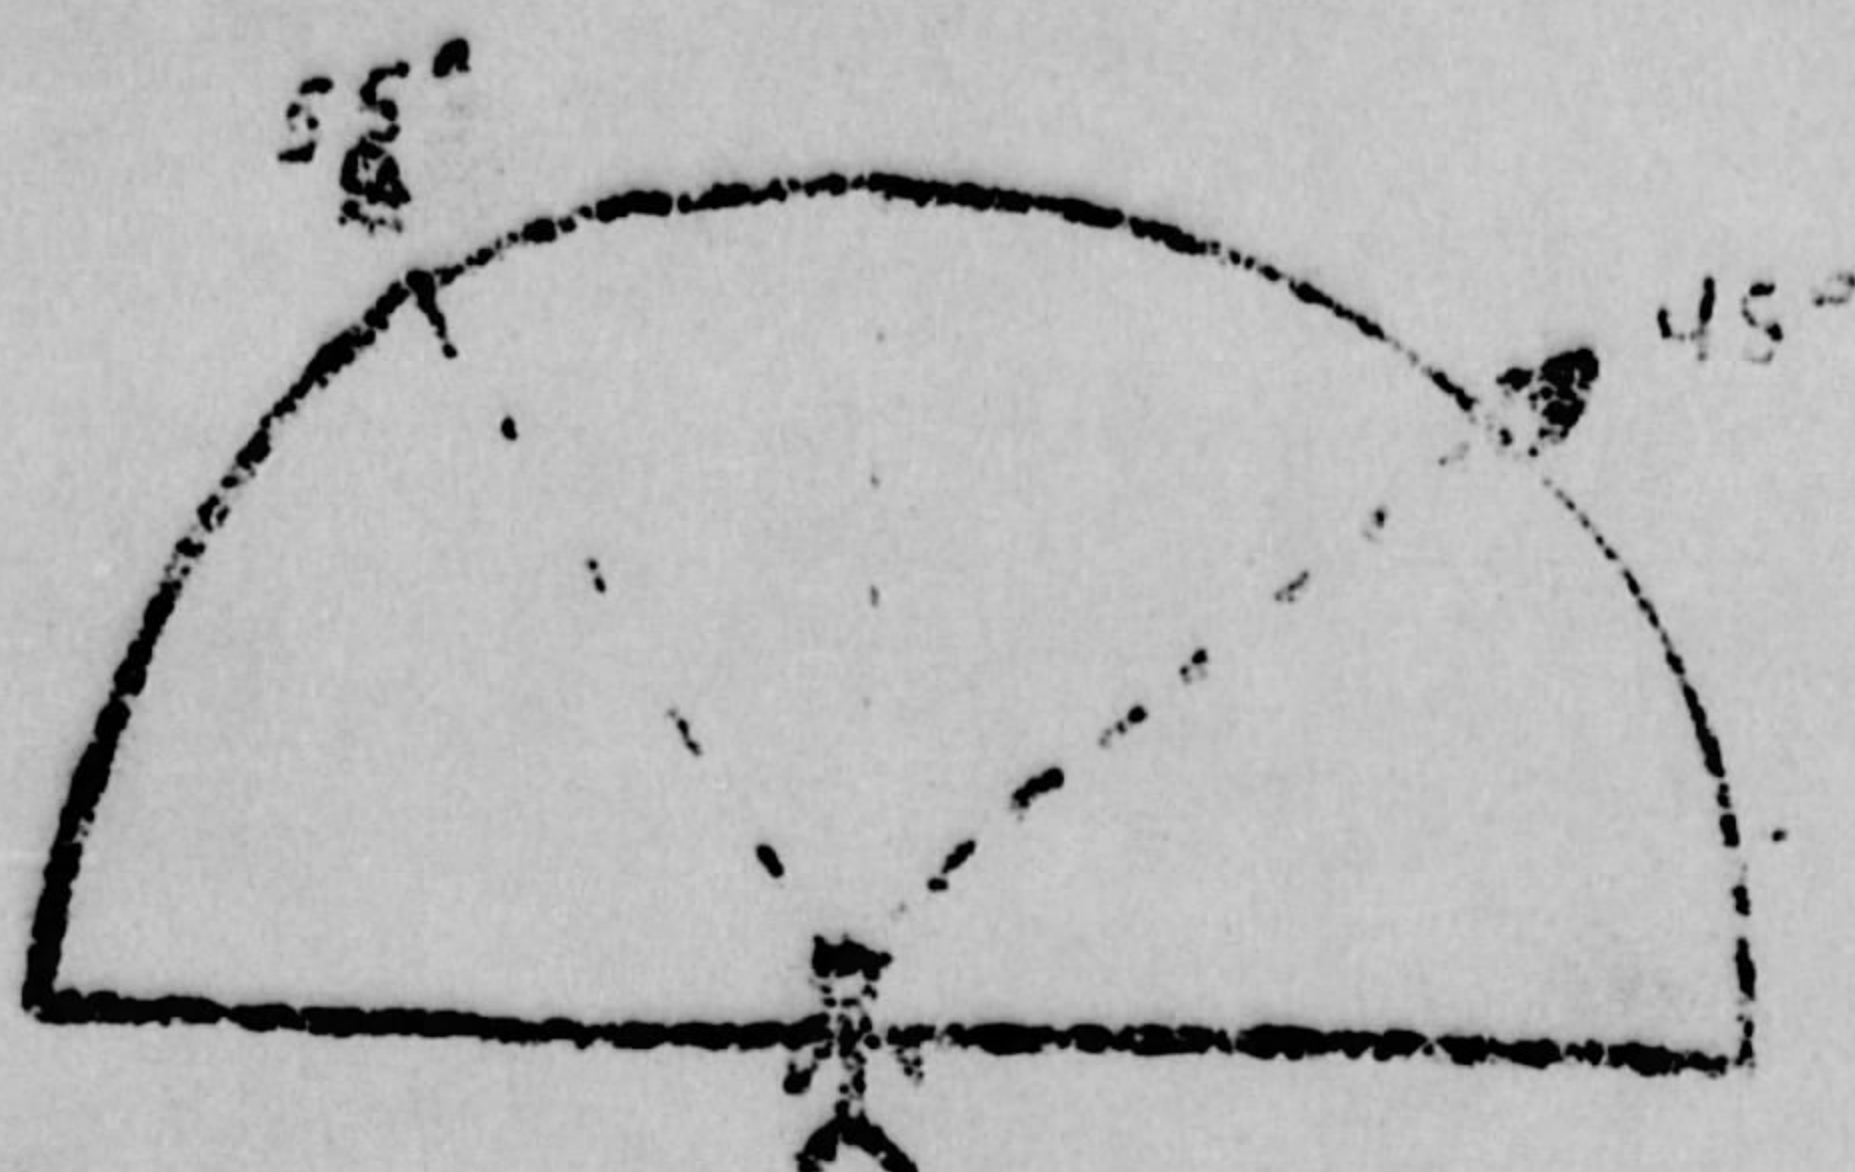

☒ not sure

☒ approximately 55° to 60° due east to disappearance

③②

③③

③④

34.1. ☒ a

34.2. ☒ c

34.3. ☒ e

34.4. ☒ f

③⑤ When did you report to some official that you had seen the object?

day
17

month
August

year
1958

I reported my sighting to Earl F. Hoff,
member of N.I.C.A.P. in the Greater Cleveland
area. (National Investigating Committee for Aerial
Phenomena.)

③⑥ Was anyone with you at the time you saw the object? ☒ No

(over)

③⑦ Was this the first time that you saw
an object, or objects like this? Answer (Yes)

③⑧ In your opinion what do you think the
object was? And what might have caused it?

Answer: I believe the object was a jet.
Why? Because it was travelling too fast
for an air-plane, it left not a vapor trail
in a very clear sky. It was not a meteor
falling, because at the tremendous height it
was not wavering in motion, nor off at an
irregular course at any time. And a plane
that high would not have a red glow the
size of a penny. The only back it had was
the stars themselves. It was not of a
natural cause.

③⑨ Do you think you could estimate the speed
of the object?

(Answer:) At the time I saw the object, which
approximately lasted for 17 seconds, I would say,
after watching later that night approximately 10 minutes
later, that correlating the two objects, I'd say
the thing traveled at some thousands miles per
hour, though it was not as high as the ~~fastest~~
the time element is the differential ~~between~~ ~~of~~

(40) Do you think you can estimate how far away the object was?

Answer: I cannot give an accurate estimate of the object's height.

(41) My name is

[REDACTED]

[REDACTED] - Cleveland, 2, Ohio

Telephone is: [REDACTED]

Presently among the unemployed.

Age - 35 Sex - Male

Grade School - Kenton Elementary
Junior High School - William Howard Taft
High School - West Technical High

(42) Date questionnaire completed;

9-9-58

(43) Date questionnaire sent to U. S. G. F. T. I. S.

9-25-58

P.S. A further thought on Question Number Ten.
The object I saw was of a complete medium red color. As for the reference to the sun-light reflection upon the object, it may have been the reflected sun-light on the object to an exact curvature of a degree to the height of the object in relation to the curvature of the earth.

10

and reflection of the sun on the object to a degree, but after it got into the earth's shadow it still remained a medium red color.

P.P.S. As a backing-up to my statements of January 24 I would like to point out an interesting fact in relationship to my theory of the electric-magnetic viewpoint.

That ~~is~~ is with the Leyden jar experiment.

~~used~~ used in ^{electric} magnetic setups in his experiment and got the same results of the well-known "angel's hair" that falls from the sky on the altars of the W.F.C.
