Sir,

I wish to report having seen an unidentified flying object on November 11, 1959 about 2:00 p.m. The following is an account of what I saw.

About 2:00 p.m. as I was looking toward the southern sky I saw a round white object coming across the sky in a south-north direction. At first I thought it was a weather balloon but soon discounted this as it got closer. It was flying high and at a tremendous rate of speed; faster than any jet could possibly fly. It had a round ball shape and was white in color. It was not glowing. It disappeared in the northern sky. The sky at the time of observation was a clear blue without cloud formations. It was not an optical illusion. The only object that I could use to describe it would be a satellite coming on a path very close to earth.

The above is a factual report as I described it. I am sending this information to you for whatever value it may be to you.

Sincerely,

19 November 1959

A weather balloon would resemble it except that it was too large and travelling too fast to be a weather balloon.

Material could be a white metal and it must have been large because of the height of its path.

I happened to be looking at the sky in a southern direction when I saw a round white object appear. At first it seemed to be without motion. As it approached the speed seemed to increase. When it was directly in front of me it was going at a terrific rate of speed. It was definitely round and white in color. It continued on its path toward the northern sky and disappeared all at once in the distance. At first I thought it might be a weather balloon but discounted this because of its size and the rate of speed it was travelling. The sky was

Clear without any cloud formations when this was observed. I have seen many weather balloons and many types of aircraft but this was definitely something that I had never seen before in the sky and yet it was something real.
