10. BRIEF SUMMARY OF SIGHTING Several people saw bright lights in the sky, near or in the vicinity of a Nike Site. Most witnesses described the action of the lights was similar to those on a helicopter.				11. COMMENTS After an exhaustive investigation was made by the reporting agency, it was determined that a privately owned helicopter, with alternating flashing red beacons fore and aft, flying in the vicinity of Reardon Wash. Lighting arrangement is not standard arrangement. The owner installed the lights to suit his needs, and as a result this lighting arrangement is not familiar to most people.	

REARDON; WASHINGTON, UFO SIGHTING OF 13 & 14 JAN. 1961

Several people reported seeing bright lights in the sky, near or in the vicinity of a Nike Site. One witness reported that after closer observation, the light that he saw was a star. Most of the other witnesses described the action of the lights were similar to those on a Helicopter. One witness stated that the lights were identical to those he had observed on a helicopter three (3) days after his original sighting. An exhaustive investigation was made by the reporting agency, and it was determined that a privately owned helicopter, with alternating flashing red beacons fore and aft, was flying in the vicinity of Reardon, Washington on the 14 and 15 of January 61.

This lighting arrangement is not a standard arrangement. The owner installed the lights to suit his needs, and as a result this lighting arrangement is not familiar to most people.

It is therefore concluded that the lights observed by the witnesses were those on this helicopter.

LEADER OR OF CHOPPER FLYING AT THAT TIME. PARA K. THE PREPARING
OFFICER IS THE CHIEF OF COMBAT INTELLIGENCE SECTION OF THE 92D
BOMB WING H. THESE OBJECTS WERE OBSERVED ON FRIDAY AND SATURDAY
EVENINGS, 13 AND 14 JANUARY, AT APPROX 1830 LOCAL TIME NEAR ONE
OF THE LOCAL MISSILE SITES. ABOUT 15 PERSONS WERE REPORTED TO HAVE
SEEN THESE OBJECTS, HOWEVER THE REPORTING OFFICER WAS ONLY BEEN
ABLE TO TALK TO FOUR OF THESE PEOPLE. IT IS NOT FELT THAT THE
OTHERS COULD ADD ANYTHING AT THIS TIME. THE OTHER PEOPLE WHO
WITNESSED THE OBJECTS WERE, 3 SONS OF MR. [REDACTED]
WIFE, SGT MANSFIELD, S WIFE AND SIX WORKMEN AT THE CONVAIR SITE,
WHO WERE NOT READILY IDENTIFIABLE. MR [REDACTED], MR. [REDACTED] ARE
APPARENTLY INTELLIGENT PEOPLE AND SHOULD BE RELIABLE. SGT MAN-

FIELD HAS BEEN IN THE USAF FOR YEARS AND IS ON FLYING STATUS AT THE PRESENT TIME. THERE IS NO REASON TO DOUBT HIS RELIABILITY AND CERTAINLY WITH HIS EXPERIENCE, HE SHOULD BE ABLE IDENTIFY AN OBJECT, WERE IT ACTUALLY AN AIRCRAFT. MOST OF THE OBSERVATIONS WERE MADE ACCORDING TO THE OBSERVERS WITHIN 100-200 YARDS OF THE OBJECTS. THEY COULD SEE THE LIGHTS, BUT COULD NOT HEAR A SOUND OF ANY SORT., NOR SEE ANY SILHOUETTES OF THE OBJECTS THEMSELVES. THE PREPARING OFFICER, THE BASE POLICE OFFICER AND THE SECURITY OFFICER WENT OVER THE GROUND WHERE THE OBJECTS WERE SUPPOSE TO HAVE SETTLED, BUT

17E2 (UFO)
4472A

PAGE TWO RJWZGP 62

FOUND NO EVIDENCE OF ANYTHING HAVING LANDED OR DISTURBED THE SURROUNDING TERRAIN. THESE THREE OFFICERS AND CHIEF OF INTELLIGENCE SPENT SEVERAL HOURS SUNDAY NIGHT, 15 JANUARY, AT THE MISSILE SITE, BUT OBSERVED NOTHING UNUSUAL. BLINKING RED LIGHTS WERE OBSERVED IN THE DISTANCE, UPON LEAVING THE SITE, BUT THESE WERE UNDOUBTEDLY FROM AN AIRCRAFT FLYING IN THE VICINITY. FROM THE PRELIMINARY ANALYSIS, THE PREPARING OFFICER HAS NO IDEA OF THE POSSIBLE CAUSES OF THE SIGHTINGS. PARA 1. NONE. PARA M ADDED 9 REPORT PREPARED BY MAJOR GEORGE A. REPLY TO
ATTN OF: DCOI

9 FEB 1961

SUBJECT: UFO Sighting

TO: Air Technical Intelligence Center
ATTN: AFCIN-4E2X
Wright-Patterson AFB, Ohio

1. Reference your message AFCIN-4E2X 1-725, 24 January 1961, subject same as above.
2. All persons who witnessed the UFO were given a questionnaire to answer. Most of these people work different shifts with Convair, therefore, it has taken several days to get the questionnaires all answered.
3. No sightings have been reported since 13 and 14 January 1961. The ceiling on the nights in question was 4000 feet overcast with a few scattered clouds in the area. This was the observation at Fairchild Air Force Base weather station. Reardan, Washington, is about 23 miles to the west of the station.

FOR THE COMMANDER:

1 Atch
Sealed envelop

N. L. NOVINSKI
Maj., USAF
Base Dir of Admin Sces

FOR OFFICIAL USE ONLY

NAME: [REDACTED] Rank/Position Mechanic
AGE: Serial Number (Military Only)

1. How bright were the objects at their brightest?

As bright as the lights you might see on a helicopter.

2. Did they cast shadows?

No.

3. When the objects were closest to the witnesses, how close were the objects to the ground?

Only saw one. Approximately two or three hundred feet.

4. Estimate the distance from witnesses to objects when objects were closest to the ground.

From one quarter to one half mile.

5. Did the objects pass between witnesses and some other object such as a pole, tree, etc.?

No.

6. Over how large an area of the sky did the objects maneuver?

I first observed it coming from the West, passing South and going East.

7. What was the fastest and slowest rate of movement?

About 40 to 50 miles per hour.

8. Did the rate of movement have an effect on the color of the object?

No.

9. How long was each object in sight?

About five minutes.

10. Did the objects seen on 14 January have the same characteristic movements as those seen on 13 January?

I did not see it on the 13th.

11. Give a detailed account of each objects maneuvers.

It behaved such as a helicopter would behave.

12. What was the ceiling height on 13 January?

I did not see it on the 13th.

13. Did you attempt to photograph the objects?

No.

14. Were the sightings all made from the confines of the missile site?

Yes.

15. How far from another witness were you?

Arms length.

16. List any other information pertaining to the sightings.

None.

17. Suppose you were able to place an object in the sky at approximately the same position as the lights that you saw. What type of an object would you use to simulate the lights?

I would use a helicopter.

NAME: Pete E. Bisson Rank/Position Security Guard.
AGE: 26 Serial Number(Military Only) _____

1. How bright were the objects at their brightest?

Bright.

2. Did they cast shadows?

No shadows---No sound.

3. When the objects were closest to the witnesses, how close were the objects to the ground?

200 Feet.

4. Estimate the distance from witnesses to objects when objects were closest to the ground.

one quarter mile.

5. Did the objects pass between witnesses and some other object such as a pole, tree, etc.?

Yes Trees.

6. Over how large an area of the sky did the objects maneuver?

2 miles.

7. What was the fastest and slowest rate of movement?

Standstill

Unestimated rate of speed.

8. Did the rate of movement have an effect on the color of the object?

?

9. How long was each object in sight?

Half hour.

10. Did the objects seen on 14 January have the same characteristic movements as those seen on 13 January?

I don't know.

11. Give a detailed account of each objects maneuvers.
Standstill---Slow movement from Westward to the Southeast and back to spot
where first seen. Also very fast movement.

12. What was the ceiling height on 13 January?

I don't remember. I think it was a clear night.

13. Did you attempt to photograph the objects?

No.

14. Were the sightings all made from the confines of the missile site?

Yes.

15. How far from another witness were you?

8 Feet.

16. List any other information pertaining to the sightings.

None

17. Suppose you were able to place an object in the sky at approximately the same position as the lights that you saw. What type of an object would you use to simulate the lights?

Helicopter stopped in mid-air with the speed of a jet plane or faster.

NAME: [REDACTED] Rank/Position T/Sgt, USAF
AGE: 30 Serial Number (Military Only) [REDACTED]

1. How bright were the objects at their brightest?

Very bright

2. Did they cast shadows?
No, It was at night

3. When the objects were closest to the witnesses, how close were the objects to the ground?

30 to 40 Ft

4. Estimate the distance from witnesses to objects when objects were closest to the ground.

1/4 Mi

5. Did the objects pass between witnesses and some other object such as a pole, tree, etc.?

Yes, tree

6. Over how large an area of the sky did the objects maneuver?

Approximately 5 miles

7. What was the fastest and slowest rate of movement?

At times very fast

At times very slow

8. Did the rate of movement have an effect on the color of the object?

Unknown

9. How long was each object in sight?

30 Min

10. Did the objects seen on 14 January have the same characteristic movements as those seen on 13 January?

Unknown

11. Give a detailed account of each objects maneuvers.

Object was about 1/4 to 1 mile from house. It was from 30 to 40 ft from the ground, until a car was about 50-75 yards away. Then the object went up at a high speed to about 5,000 ft where it went behind a cloud.

12. What was the ceiling height on 13 January?

Unknown

13. Did you attempt to photograph the objects?

No

14. Were the sightings all made from the confines of the missile site?

No, Mine was from my home

15. How far from another witness were you?

My wife was with me

16. List any other information pertaining to the sightings.

None

17. Suppose you were able to place an object in the sky at approximately the same position as the lights that you saw. What type of an object would you use to simulate the lights?

When close to the ground, it was like a helicopter
But when going up the light was as large as a big
search light but with no beam.

NAME: Luddie V. McMahon Jr.

Rank/Position

Janitor

AGE: 34 Serial Number (Military Only)

After closer observation, the light I saw was a star.

1. How bright were the objects at their brightest?

Bright Star.

2. Did they cast shadows?

No.

3. When the objects were closest to the witnesses, how close were the objects to the ground?

From one mile to a thousand miles.

4. Estimate the distance from witnesses to objects when objects were closest to the ground.

Same as above.

5. Did the objects pass between witnesses and some other object such as a pole, tree, etc.?

No.

6. Over how large an area of the sky did the objects maneuver?

None

7. What was the fastest and slowest rate of movement?

No. Movement.

8. Did the rate of movement have an effect on the color of the object?

No.

9. How long was each object in sight?

1 hour.

10. Did the objects seen on 14 January have the same characteristic movements as those seen on 13 January?

Did not see it on the 14th

11. Give a detailed account of each objects maneuvers.

None.

12. What was the ceiling height on 13 January?

N/A

13. Did you attempt to photograph the objects?

No.

14. Were the sightings all made from the confines of the missile site?

Yes.

15. How far from another witness were you?

five feet.

16. List any other information pertaining to the sightings.

None.

17. Suppose you were able to place an object in the sky at approximately the same position as the lights that you saw. What type of an object would you use to simulate the lights?

Star.

NAME: G. Thomas

Rank/Position

SATAF

AGE: 43

Serial Number (Military Only)

1. How bright were the objects at their brightest?

About like a spot light.

2. Did they cast shadows?

No.

3. When the objects were closest to the witnesses, how close were the objects to the ground?

Just over tree top level.

4. Estimate the distance from witnesses to objects when objects were closest to the ground.

Approx. 500 yds.

5. Did the objects pass between witnesses and some other object such as a pole, tree, etc.?

Yes

6. Over how large an area of the sky did the objects maneuver?

?

7. What was the fastest and slowest rate of movement?

By guess 80 miles per hour.

8. Did the rate of movement have an effect on the color of the object?

No.

9. How long was each object in sight?

Ref. #11.

10. Did the objects seen on 11 January have the same characteristic movements as those seen on 13 January?

13 Jan. only.

11. Give a detailed account of each objects maneuvers.

Two units of light moving in a South Easterly direction. They came ~~15~~ into sight, passed behind a hill and reappeared again on the other side. They were still moving at the same approx. speed. Then they disappeared behind some trees.

12. What was the ceiling height on 13 January?

Unknown.

13. Did you attempt to photograph the object?

No.

14. Were the sightings all made from the confines of the missile site?

Yes

15. How far from another witness were you?

150 feet.

16. List any other information pertaining to the sightings.

Lighting was identical to lighting on a helicopter which passed over head toward Reardan as I was headed back to the base at approx. 23:55 on the 16 of Jan.

17. Suppose you were able to place an object in the sky at approximately the same position as the lights that you saw. What type of an object would you use to simulate the lights?

Helicopter.

NAME: [REDACTED]

Rank/Position A/CO

AGE: 33

Serial Number(Military Only)

1. How bright were the objects at their brightest?

White Light, quite bright as a search light might be coming out of the sky over the main gate.

2. Did they cast shadows?

No.

3. When the objects were closest to the witnesses, how close were the objects to the ground?

100 ft. off ground.

4. Estimate the distance from witnesses to objects when objects were closest to the ground.

100 yds.

5. Did the objects pass between witnesses and some other object such as a pole, tree, etc.?

Passed over trees and appeared to descend about a quarter of a mile away to the South of gate house.

6. Over how large an area of the sky did the objects maneuver?

Over an area of a half mile. At this time light was red and Square, but what ever it was it had no outline.

7. What was the fastest and slowest rate of movement?

When last seen from gate house it traveled toward the West and seemed to move as a helicopter might move across the sky. Hard to say as to speed.

8. Did the rate of movement have an effect on the color of the object?

No.

9. How long was each object in sight?

First time about five minutes. Second time about five minutes.

10. Did the objects seen on 14 January have the same characteristic movements as those seen on 13 January?

Didn't see on the 13th.

11. Give a detailed account of each objects maneuvers.

Going out to gate house the object seemed to have a white light like a search light. I went in to the gate house and told guard and he said that it was the object. I said, "I just saw it." I went back out and at that time object had landed to the south of gate, maybe a half mile or so away. Later saw object or what appeared to be a helicopter to the east. No detail or outline.

12. What was the ceiling height on 13 January?

It was dark, had been raining, but lights were quite visible.

13. Did you attempt to photograph the objects?

No.

14. Were the sightings all made from the confines of the missile site?

Outside of gate about 15 to 25 feet.

15. How far from another witness were you?

There were five or six of us watching the lights within three or four feet of each other.

16. List any other information pertaining to the sightings.

None.

17. Suppose you were able to place an object in the sky at approximately the same position as the lights that you saw. What type of an object would you use to simulate the lights?

First time I saw it it looked like a search light.

Second time I saw it it looked like a Helicopter.

NAME: David R. Gelb

Rank/Position

AGE: 31

Serial Number(Military Only)

1. How bright were the objects at their brightest?

Quite Bright

2. Did they cast shadows?

No Shadows

3. When the objects were closest to the witnesses, how close were the objects to the ground?

They were a fair distance away and I am not a good judge of distance. I would estimate 1500 to 2000 ft.

4. Estimate the distance from witnesses to objects when objects were closest to the ground.

About 12 miles

5. Did the objects pass between witnesses and some other object such as a pole, tree, etc.?

No.

6. Over how large an area of the sky did the objects maneuver?

I saw them for only a short time before I lost track of them.

7. What was the fastest and slowest rate of movement?

Speed was apparently constant and not exceedingly fast.

8. Did the rate of movement have an effect on the color of the object?

No.

9. How long was each object in sight?

I saw them for only about thirty to forty five seconds.

10. Did the objects seen on 14 January have the same characteristic movements as those seen on 13 January?

I saw them only on the thirteenth of January.

11. Give a detailed account of each objects maneuvers.

I spotted the red blinking lights low on the horizon. I did not see them for some time after the other witnesses had. At first I saw only one light, then there were three moving from West to East. I lost sight of them after about 30 seconds. They were red blinking lights that looked exactly like the beacon lights on an aircraft. I remember having the impression that they were helicopters. One of them seemed to change direction rather abruptly.

12. What was the ceiling height on 13 January?

I believe it was a fairly clear night.

13. Did you attempt to photograph the objects?

No.

14. Were the sightings all made from the confines of the missile site?

Yes.

15. How far from mother's witness were you?

Side by side.

16. List any other information pertaining to the sightings.

17. Suppose you were able to place an object in the sky at approximately the same position as the lights that you saw. What type of an object would you use to simulate the lights?

Beacon lights on an aircraft.

NAME: Robert M. Rosenbom Rank/Position Time Keeper

AGE: 29 Serial Number(Military Only)

1. How bright were the objects at their brightest?

A Bright star.

2. Did they cast shadows?

No.

3. When the objects were closest to the witnesses, how close were the objects to the ground?

200 Ft.

4. Estimate the distance from witnesses to objects when objects were closest to the ground.

10 miles.

5. Did the objects pass between witnesses and some other object such as a pole, tree, etc.?

No.

6. Over how large an area of the sky did the objects maneuver?

Fifty Feet.

7. What was the fastest and slowest rate of movement?

Object was going about 100 MPH.

8. Did the rate of movement have an effect on the color of the object?

No.

9. How long was each object in sight?

Five minutes.

10. Did the objects seen on 11 January have the same characteristic movements as those seen on 13 January?

Didn't see it on the 14th.

11. Give a detailed account of each objects maneuvers.

I would have had to say this was a star, but the object moved to the right and to the left.

12. What was the ceiling height on 13 January?

~~DEME~~ Have no idea.

13. Did you attempt to photograph the object?

No.

14. Were the sightings all made from the confines of the missile site?

Yes.

15. How far from another witness were you?

right next to me.

16. List any other information pertaining to the sightings.

I have seen other lights out here that could very well have been an aircraft. The object I saw moved and it wasn't an aircraft.

17. Suppose you were able to place an object in the sky at approximately the same position as the lights that you saw. What type of an object would you use to simulate the lights?

Star.

NAME: J. R. McDaniel Rank/Position Guard (Site A-9)

AGE: 45 Serial Number (Military Only)

1. How bright were the objects at their brightest?

Very Bright.

2. Did they cast shadows?

No.

3. When the objects were closest to the witnesses, how close were the objects to the ground?

Approx. 10 Feet.

4. Estimate the distance from witnesses to objects when objects were closest to the ground.

Approx. 50 yards.

5. Did the objects pass between witnesses and some other object such as a pole, tree, etc.?

No.

6. Over how large an area of the sky did the objects maneuver?
I would guess one quadrant of the sky.

7. What was the fastest and slowest rate of movement?

Fastest--faster than any jet that I have seen.

Slowest--very slow to stopped

8. Did the rate of movement have an effect on the color of the object?

No.

9. How long was each object in sight?

Longest time--five min.

Shortest time--a few seconds.

10. Did the objects seen on 14 January have the same characteristic movements as those seen on 13 January?

Yes.

11. Give a detailed account of each objects maneuvers.

Their movements were smooth and very fast in all directions of flight. They did seem encumbered with the law of gravity or inertia or ~~friction~~ friction.

12. What was the ceiling height on 13 January?

I would guess about 5000 feet.

13. Did you attempt to photograph the objects?

Yes but they were too far away and all I would have gotten was a light, so I did not activate the camera.

14. Were the sightings all made from the confines of the missile site?

No.

15. How far from another witness were you?

From four feet to three quarters of a mile on one occasion.

16. List any other information pertaining to the sightings.

There was a complete absence of sound. There were no light rays from the lights, and there was no heat from the bottom. It had fabulous speed.

17. Suppose you were able to place an object in the sky at approximately the same position as the lights that you saw. What type of an object would you use to simulate the lights?

On one occasion a triangular red light and a round white light with no rays and no sound or no silhouette. The red light was about five feet above the white light. Looked like a stick hanging in the air holding two lights.

On another occasion just a lantern flashlight hanging in the air with nothing around it, but with no rays emanating. It was white and very bright.

On another occasion like a large round board with a round fluorescent light attached to the bottom.

NAME: [REDACTED] Rank/Position High School Student
AGE: 15 Serial Number (Military Only) _____

1. How bright were the objects at their brightest?

Very Bright.

2. Did they cast shadows?

No.

3. When the objects were closest to the witnesses, how close were the objects to the ground?

10 Feet.

4. Estimate the distance from witnesses to objects when objects were closest to the ground.

50 Yards.

5. Did the objects pass between witnesses and some other object such as a pole, tree, etc.?

No.

6. Over how large an area of the sky did the objects maneuver?

One fourth of the sky.

7. What was the fastest and slowest rate of movement?

Fastest---faster than any jet that I have seen.

Slowest---stopped.

8. Did the rate of movement have an effect on the color of the object?

~~XXXXXXXXXXXXX.~~

No.

9. How long was each object in sight?

Eight minutes

10. Did the objects seen on 11 January have the same characteristic movements as those seen on 13 January?

The characteristic movements were the same each time that I saw them. I did not see them on the 13th.

11. Give a detailed account of each objects maneuvers.

Their maneuvers were swift and smooth, even in starting and stopping at all times.

12. What was the ceiling height on 13 January?

I didn't sight the objects on the 13th.

No.

14. Were the sightings all made from the confines of the missile site?

No.

15. How far from another witness were you?

four to five feet.

16. List any other information pertaining to the sightings.

I sighted the objects six times. At no time was there sound silhouette, or reflection of any kind.

17. Suppose you were able to place an object in the sky at approximately the same position as the lights that you saw. What type of an object would you use to simulate the lights?
