5. PHOTOS ☐ Yes ☒ No	6. SOURCE Military		
7. LENGTH OF OBSERVATION 7-8 min	8. NUMBER OF OBJECTS 1	9. COURSE straight path	
10. BRIEF SUMMARY OF SIGHTING Size of star in belt of Orion. Color white, with same magnitude of a star. Noticed it in a group of stars on a 40° angle to horizon which was apparent by its movement. Sighted 40° above horizon to line of flight. Remained in straight and level flight and disappeared fm point of view due to vision limitations imposed by cockpit configuration. Position of a/c--1950N 16430E, 100 miles NW of Wake Island on a heading of 288° T.		11. COMMENTS A check was made with Space Track to determine if objt could have been satellite, with negative results. Objts apparent movement was too fast for a planet, and too slow for meteor. Witnesses gave elev of objt, but not az, precluding a valid conclusion as to nature of objt. <u>CONSIDERED SATELLITE BY USN IN LATER REPORT.</u>
