Draw a picture of how they were arranged, and put an arrow to show the direction that they were traveling.

Said he saw the object first on 6 Nov 61. There was another one at that time which seemed to follow and catch up to, but not pass the first. On several occasions since he has seen one or both of these objects.

20. Draw a picture that will show the motion that the object or objects made. Place an "A" at the beginning of the path, a "B" at the end of the path, and show any changes in direction during the course.

21. How large did the object appear to you as compared to an object with which you are familiar?

Bright star.

22. We wish to know the angular size. Hold a match stick at arm's length in line with a known object and note how much of the object is covered by the head of the match. If you had performed this experiment at the time of the sighting, how much of the object would have been covered by the match head?

$$\frac{1}{4}$$

23. Did the object disappear while you were watching it? If so, how?

Yes. Faded.

24. In order that you can give as clear a picture as possible of what you saw, describe in your own words a common object or objects which, when placed up in the sky, would give the same appearance as the object which you saw.
