21. How large did the object appear to you as compared to an object with which you are familiar?

alarm clock and appeared 5 miles away.

22. We wish to know the angular size. Hold a match stick at arm's length in line with a known object and note how much of the object is covered by the head of the match. alarm clock and appeared to be about 5 miles away.

32. In the following sketch, imagine that you are at the point shown. Place an "A" on the curved line to show how high the object was above the horizon (skyline) when you first saw it. Place a "B" on the same curved line to show how high the object was above the horizon (skyline) when you last saw it.

(from my impression of his description)

33. In the following larger sketch place an "A" at the position the object was when you first saw it, and a "B" at its position when you last saw it. Refer to smaller sketch as an example of how to complete the larger sketch.

COMMENTS All indications point to observation of star Capella, 1 of brightest stars in northern hemisphere. Apparent color and birghtness hcange was due to scintillation. Earth's atmosphere has air currents at varying temperatures at the boundry between 2 currents there is a mixing of air masses which give rise to irregular motions in a beam of light coming fm a star. Fact that witness observed objt for long periods and on subsequent nights substantiates observation of a star.
